PHASE I ENVIRONMENTAL SITE ASSESSMENT
Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Ontario, California

COMMON ACRONYMS

µg/L	Micrograms per Liter
AAI	All Appropriate Inquiries
ACBM	Asbestos-Containing Building Material
ACM	Asbestos-Containing Material
AFFF	Aqueous film forming foam
AHERA	Asbestos Hazard Emergency Response Act
ANGS	Air National Guard Station
APCD	Air Pollution Control District
APN	Assessor's Parcel Number
AQMD	Air Quality Management District
AST	Aboveground Storage Tank
ASTM	American Society for Testing and Materials
AUL	Activity and Use Limitation
bgs	Below Ground Surface
BTEX	Benzene, Toluene, Ethylbenzene and Xylenes
CalGEM	California Geologic Energy Management Division
CERCLA	Comprehensive Environmental Response, Compensation, and Liability Act
CERCLIS	Comprehensive Environmental Response, Compensation, and Liability Information System
COC	Contaminant of Concern
CREC	Controlled Recognized Environmental Condition
DOGGR	Division of Oil, Gas, and Geothermal Resources
EPA	Environmental Protection Agency
ESA	Environmental Site Assessment
GPR	Ground-Penetrating Radar
HAZNET	Facility and Manifest Data
HREC	Historical Recognized Environmental Condition
HVAC	Heating, Ventilation, and Air Conditioning
HWS	Hazardous Waste Site
LBP	Lead-Based Paint
LCP	Lead Containing Paint
LLP	Landowner Liability Protection
LQG	Large Quantity Generator
LUST	Leaking Underground Storage Tank
MCL	Maximum Contaminant Level
mg/kg	Milligrams per Kilogram
mg/L	Milligrams per Liter
MSDS	Material Safety Data Sheet
MTBE	Methyl Tertiary Butyl Ether
ND	None Detected
NESHAP	National Emission Standards for Hazardous Air Pollutants
NFA	No Further Action
NOV	Notice of Violation

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Ontario, California

COMMON ACRONYMS (CONTINUED)

NPL	National Priorities List
NTC	Notice to Comply
O&M	Operations and Maintenance
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PCE	Perchloroethylene, Tetrachloroethylene, Tetrachloroethene, PERC
pCi/L	Picocuries per Liter
ppb	Parts per Billion
ppm	Parts per Million
PTO	Permit to Operate
RCRA	Resource Conservation and Recovery Act
REC	Recognized Environmental Condition
RP	Responsible Party
sf	Square feet
SLIC	Spills, Leaks, Investigation, and Cleanup
SQG	Small Quantity Generator
SVOC	Semi-Volatile Organic Compound
TCE	Trichloroethylene, Trichloroethene
TPH	Total Petroleum Hydrocarbons
TPHd	Total Petroleum Hydrocarbons (diesel range)
TPHg	Total Petroleum Hydrocarbons (gasoline range)
TPHo	Total Petroleum Hydrocarbons (oil range)
TRPH	Total Recoverable Petroleum Hydrocarbons
USDA	United States Department of Agriculture
USGS	United States Geological Survey
UST	Underground Storage Tank
VOC	Volatile Organic Compound

PHASE I ENVIRONMENTAL SITE ASSESSMENT
 Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
 Ontario, California

FINDINGS, OPINIONS, AND CONCLUSIONS

At the request of Mr. Winters, GSI Environmental Inc. (GSI) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) International, Inc. Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Assessment Process (ASTM Standard) for the 97-acre property identified below and shown on Figures 1A, 1B, and Figure 2 (Site). Any exceptions to, or deletions from, this practice are described in Section 8.0 of this report.

SITE IDENTIFICATION	
Name:	Proposed 97-Acre Project Magellan Airport Cargo Distribution
Address:	97-Acre Portion of the Ontario International Airport
City:	Ontario
County:	San Bernardino County
State:	California
Assessor Parcel Number(s):	<i>Parcels are identified on Figure 1B.</i> Parcel 61: 011326106 (approximately 48 acres) Parcel 62: 011326107 (approximately 21 acres) Parcel 63: 011326108 (approximately 2 acres) Parcel 67: 011327101 (approximately 12 acres) Parcel 68: 011327102 (approximately 14 acres)

The purpose of the Phase I ESA was to identify Recognized Environmental Conditions (RECs) as defined in the ASTM Standard. It is our understanding that this Phase I ESA has been solicited as part of environmental due diligence activities in connection with the land lease and redevelopment of the Site.

This report presents the results of the Phase I ESA and is based on the following:

- Review of the physical setting and Site reconnaissance;
- Review of historical information from Sanborn fire insurance maps, topographic maps, aerial photographs, and city directories;
- Review of prior Site reports provided to GSI or obtained from regulatory agencies;
- Information obtained from owner and/or user interviews;
- Review of available agency files including the following;
 - City of Ontario Building Department,
 - City of Ontario Fire Department,
 - South Coast Air Quality Management District (SCAQMD),
 - City of Ontario Public Works Department,
 - San Bernardino Fire Department-Hazardous Materials,
 - Department of Toxic Substances Control (DTSC)-Cypress,
 - Department of Toxic Substances Control (DTSC)-Cypress,
 - Office of the State Fire Marshal,
 - Santa Ana Regional Water Quality Control Board (SARWQCB),

- County Assessor's Office website,
- California State Water Resources Control Board (SWRCB) Deed Restrictions website,
- SWQCB GeoTracker website,
- DTSC Envirostor website,
- DTSC Land Use Restrictions website,
- National Pipeline Mapping System (NPMS),
- California Geologic Energy Management Division (CalGEM) website; and
- Review of regulatory agency database information for the Site and surrounding properties.

The Site is located in Ontario, California and comprises of approximately 97 acres of the Ontario International Airport that was previously agricultural property or vineyards until the mid to late 1950's. The Site consists of 24 buildings and Hangars, ancillary structures, and parking facilities. The Site is located north of East Avion Street and west of the Cucamonga Creek with a small portion connecting to South Hellman Avenue. The Site is broken down into five parcels, Parcel 61, Parcel 62, Parcel 63, Parcel 67, and Parcel 68.

Historically, Parcel 61 was occupied by Northrop Aircraft Company and Douglas Aircraft in the 1950s. Lockheed Aircraft occupied Hangar 4 between 1955 and 1980. In 1955, GE Engine Services, Inc. moved their operations to the Site and Northrop vacated. The former Los Angeles Police Department (LAPD) Emergency Vehicle Operations Course (EVOC) was previously located in the center of the Site along the western border of Parcel 62. Historical use on Parcel 61 has included the use of chlorinated solvents, the storage and dispensing of fuel, fire suppression chemical storage, and hazardous waste storage and waste treatment (including clarifiers, wash racks, and sumps). Multiple underground storage tanks (USTs) have been documented at the Site and documentation of removal was not identified during this investigation.

Parcel 62 was primarily agricultural until the 1950s. In 1983, the main Hangar and office building were developed, and by 1987, the second Hangar was in use. In 1994, an outbuilding maintenance area was constructed and put into service. A fuel farm was located on the southwestern corner of the Site and two clarifiers, and a maintenance shop have been documented on the Parcel. Historical use of chemicals at Parcel 62 has included chlorinated solvents, and fire suppression chemical storage. Poor housekeeping was identified in the vicinity of unmarked drums and stained concrete around the fire suppressant storage area within the Guardian Jet Center. Multiple USTs have been documented at the Site. Although it appears that the USTs located on Parcel 62 have been removed, closure documentation was not identified, and some impacted soil from at least one leaking UST remains in place at the Site.

Parcels 67 and 68 historically included the Ontario Air National Guard Station (ANGS) with ancillary structures to the south and east. In the 1950s, a Hangar, fire station, fueling station, and wash rack were constructed at the Site. In 1952, the 196th Tactical Air Support Group was assigned to the Ontario Airport. During this time, the facilities were updated, and operations included the maintenance of aircraft vehicles and aerospace ground equipment. A munitions bunker was constructed in the 1950s and later used by Lockheed in the 1990s for storage of ammunition and explosives. The 196th vacated the Site in 1983 and the 148th Combat Communications Squadron (CBCS) occupied the Site from 1984 through 1998. The ANGS was closed in September 1998. Historical use on Parcels 67 and 68 has included the use of clarifiers,

Above ground storage tanks (ASTs), and USTs. Although USTs have been removed, documentation of regulatory closure was not identified and there is reference to one UST that was not accounted for during the removal process. Poor housekeeping was identified in the vicinity of a leaking waste drum.

The southern portion of the Site is comprised of Parcel 63 and a small portion of Parcel 61. This location has been primarily agricultural and historically stored a bunker. These parcels are currently utilized for parking and include a large storm drain outlet.

During the three-day Site reconnaissance, many of the features identified in the Parcel descriptions above were identified and added to Table 1 and Figure 3. Historic UST areas were identified next to the former California Air National Guard (CANG) Hangar and southwest of the current Guardian Jet Center Hangars. Three concrete secondary containment structures were observed at 61W-29 where aboveground storage tanks used to be held. Two clarifiers were observed east of the Guardian Jet Center Hangars as well. A wash rack and backfilled clarifier was identified northeast of the CANG Hangar as well as a former fueling station. Multiple locations across the Site were identified to have staining. A concrete pad with red staining was observed to the east of the Guardian Jet Center Hangars. Inside of the Guardian Jet Center southern Hangar, staining was observed around the aqueous film forming foam (AFFF) suppression system. The large hydraulic jacks adjacent to Hangar 1 were observed to be leaking oil that had stained the asphalt underneath them. Two above ground fuel tanks were observed in secondary containers inside a shed at the former CANG maintenance yard. AFFF fire suppression tanks were observed inside the Guardian Jet Center Hangars. A shed to the northeast of Hangar 3 and the ancillary structure next to Hangar 4 were observed to have hazardous waste storage signs. Multiple drums and drains were located throughout the Site.

This assessment has revealed no RECs, controlled RECs (CRECs), historical RECs (HRECs), or *de minimis* conditions in connection with the Site except for those described below.

Recognized Environmental Conditions (RECs)

RECs are defined in the ASTM Standard as “*the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*”

This Phase I ESA has revealed no evidence of RECs in connection with the Site with the exception of those identified in Table 1 and on Figures 3 and 4. RECs identified in Table 1 are summarized on the following pages.

Parcel	Map Feature Number	Description	Explanation of REC
61W	1	<p>General Electric Hangar 4 Area - This area has been identified as part of the General Electric (GE) Leasehold and is also identified as Hangar 4. GE Engine Services Facility Equipment Report has record of permits (1980s and 1990s) for degreasers that used 1,1,1-trichloroethane (1,1,1-TCA), abrasive blasting, spray booths, amine (or DEA) regeneration, service stations for dispersing and storing gasoline, storage tanks, 1,1,1-TCA, miscellaneous inorganic slippage tank, chemical filling, and canceled permits for gasoline storage tanks, fuel oil storage tank, jet engine test oil facility, degreaser 1,1,1-TCA, and tank surface preparation/other acids.</p> <p>According to a historical Phase I ESA for Hangar 4, a septic tank/leach field was sited from approximately 1966 to 1990, when the building was connected to a sanitary sewer system. The historical septic tank/leach field location has not been identified and closure or sampling data is not available (Mactec, 2005).</p> <p>Waste removed from GE in 1993 reportedly included spent butanes, waste water, pretreatment sludge, aluminum oxide grit residue, oil soaked materials, epoxy resin, corrosive mixtures, flammable liquid, soil contaminated with Stoddard Solvent (leaky from UST removal), metal oxide powder, fiberglass with bentonite, RCRA empty drums contaminated with solvents, soil contaminated with jet fuel (likely from UST 11 removal), water and jet fuel, bulked solvents, solvents, waste oil, 1,1,1-TCA distillation sludge, bottom sludge from cooling tower, "Person B liquid", oil-soaked materials, machine coolant.</p>	<p>Historical Use, including the use of chlorinated solvents as well as storage and dispensing of fuel in the vicinity of the GE Leasehold throughout the 1980's and early 1990's was likely to have released contaminants to the environment. Historical use of this area is indicative of a release to the environment and is considered a REC.</p>
		<p>Hangar 4 (Outside): Hangar 4 is constructed of corrugated steel (with flaking paint), steel framing, roll up and sliding doors. A truck scale is located north of the hangar. A maintenance/storage shed is located in the northwest corner of the building that is surrounded with a chain-link fence. Electrical transformers/substation is located west of the hangar. An asphalt patch was observed that contained a sewer vault west of the hangar. Fire suppression piping and valves are located west of the hangar and east of a chain-linked fence.</p>	<p>It is GSI's experience that historical maintenance/storage sheds can often store leaking and damaged equipment that release contaminants to the environment. This area is considered part of Hangar 4. Historical Use of this area is indicative of a release to the environment and is considered a REC.</p>
		<p>Hangar 4 (inside): Furniture and office equipment storage, Delcrete Dispatch-5 gallon buckets (x3), a large electrical box, fire hoses, Flinn scales, fire extinguishers, ash trays, and pallets of leaking 5 gallon buckets were observed. Buckets: BioSolvia pink water (50, 5-gallon capacity, several leaking), AMEREX BC Purple K dry chemical (9, 5-gallon capacity, several leaking), Winsol (13, 5-gallon capacity) containing fire suppression "training foam", Blue 50 adhesive (7, 5-gallon capacity, one leaking), MET LX (7, 5-gallon capacity), SuperMarket Wax Stripper (6, 5-gallon capacity), American Traffic Products Inc.-red fast dry paint (1, 5-gallon capacity), Enns paint-white traffic paint (1, 5-gallon capacity, 7 empty), Ecoplate MFC degreaser (1, 5-gallon capacity). The buckets containing fire suppression chemicals may contain PFAS.</p>	<p>GSI observed release of chemicals to the environment from multiple stored chemical buckets, including buckets that may contain PFAS chemicals that are commonly used in AFFF fire suppression foam. This area is considered part of Hangar 4. Observed release to the environment is considered a REC.</p>
		<p>Hangar 4 Inside Haz Storage Building (61W-23): A hazardous waste storage label was located on the exterior door to the hangar. Observations include: an empty flammable liquid cabinet, Geniebi Lemon Cleaner (1, 5-gallon capacity), traffic paint buckets (9, 5-gallon capacity), Intentional Coatings Traffic Paint (2, 5-gallon capacity), overhead fire suppression system (water-only), light bulbs, wood pallets, electronic, electrical meters, fuse boxes, circuit boards, a portable eye wash, station, an empty 55-gallon drum labeled 1A2/Y1 2/100, 2 pallets full of cleaning supplies (approximately 72 boxes), cleaning pads and sweepers, and overhead lighting.</p>	<p>This area is considered part of Hangar 4. It is GSI's experience that historical drum storage areas are indicative of sources of contaminant release to the environment. Historical use of this area for hazardous waste storage is indicative of a release to the environment and is considered a REC.</p>
61W	10	<p>Hazardous waste storage structure: Concrete slab with concrete secondary containment berm, concrete ramp leading into the containment area, chain-linked perimeter fence, central floor drain, and corrugated steel roof. Several concrete patches (possibly former bonding/repairing locations) observed in the concrete slab near the floor drain, and several outside the hazardous waste storage structure. A hazardous yard and EHS sticker was observed on the window of a storage shed located northwest of the hazardous waste storage structure.</p>	<p>It is GSI's experience that historical hazardous waste storage buildings often have stored damaged containers that release contaminants to the environment and are indicative of sources of contaminant release to the environment. This structure has a drain located in the middle of the concrete slab, which may have provided a direct path to the subsurface for any hazardous waste that was released within the structure. Historical use of this area for hazardous waste storage is indicative of a release to the environment and is considered a REC.</p>
61W	10	<p>Second storage awning: Concrete slab with concrete secondary containment berm, desk supplies, e-waste, office furniture, computer equipment, a water dispenser unit, printers, ink cartridges, keyboards, fluorescent light bulb housing, water bottles and a mini-fridge. A 1993 figure from SFD agency records identifies this area as the "Expanded Drum Storage Area (HYMUL No. 5)".</p>	<p>This drum storage area was identified as a Hazardous Waste management Unit (HWMU) in historical documents. It is GSI's experience that historical drum storage areas are indicative of sources of contaminant release to the environment. Historical use of this area for hazardous waste storage is indicative of a release to the environment and is considered a REC.</p>
61W	17A	<p>Hangar 6 - Hangar 5 was historically utilized to repair, overhaul, and clean jet engines and parts. Routine inspection records from the SFD and DTSC in 2005 identified several violations. Photographic of the violations included oil spillage around a grinding machine and oil leakage around a machine in the Machine shop. Large pit in northwest corner of Hangar 5 containing floor drain.</p>	<p>It is GSI's experience that facilities utilized to repair and clean parts are often sources of contaminant release to the environment. Historical records have identified poor housekeeping with chemicals spilled to the ground surface. Historical use and documentation of release to the environment is considered a REC.</p>
61W	23	<p>Hazardous Waste Storage Building - Included in 61W-1</p>	See 61W-1
61W	24	<p>Maintenance/Storage Shed - Included in 61W-1</p>	See 61W-1
61W	26	<p>Hazardous Waste Storage Area - Historical reports identified that this area was used for hazardous waste storage. There was no access to this area as it is leased (part of 61W-15). What appears to be a hazardous waste storage area was observed northwest of the building. This shed is covered and is constructed out of corrugated steel (barbed).</p>	<p>A hazardous waste storage area was identified in historical records, but was not observed during the Site Reconnaissance. It is GSI's experience that historical hazardous waste storage buildings often have stored damaged containers that release contaminants to the environment. Documented historical use of this area for hazardous waste storage is indicative of a release to the environment and is considered a REC.</p>

Parcel	Map Feature Number	Description	Explanation of REC
61W	29	Historical AST and Waste Treatment Area - This building is located northeast of Hangar 11 and feature 61W-28. Reportedly the location of former GE office space constructed of corrugated steel. No access during the Site reconnaissance. Secondary concrete enclosures were located to the north and east of the building where ASTs were formerly located. One of the enclosures is currently labeled "T23 containment area." Documents identify one 50,000-gallon noise water storage tank, one 2,000-gallon H ₂ SO ₄ AST and one 3,000-gallon HCL. A 1985 inspection includes a drawing that identifies the ASTs and layout of the area. A pump was present within the building and waste was piped to a treatment and containment area. Waste types treated included waste water from the oil-water separator at the test-cell facility and waste water from tanks at the cleaning line and steam cleaning units located at the EHS department and at Hangar 11. The wastewater treatment system was removed in 2006.	A historical AST and waste treatment area was identified in historical documents but the ASTs were not observed during the Site Reconnaissance. It is GSI's experience that historical ASTs and the associated waste treatment area could be a source of contaminant release to the environment. Documented historical use of this area for waste and the presence of a sump is indicative of a release to the environment and is considered a REC.
61W	30	Hangar 1 - Corrugated steel (painted) containing air conditioning units, and rolling track hangar doors (retrofitted to roll-up doors. Large leaking portable airplane hydraulic lifts located outside Hangar 1 and next to a large concrete pad (61W-26). Shed next to the hangar has a "no smoking" and fire extinguisher sign and a concrete perimeter slab containing a berm. Observed in the hangar are a water heater, overhead power and HVAC, a possible drainage sump with missing grates on top in the northeast corner, two long floor drains near the room with sump, electrical rooms, and a room containing an overhead crane in the northwest corner. An inspection report from SBFD from 5 October 2005 indicates that drums of used oil, waste fuel, oily rags, used oil filters, and used absorbent were present on the Site. An inspection report from SBFD from 8 October 2006 indicates the following: cleaning line room: dark purplish color staining from J-88 Cleaner (contains potassium permanganate), concrete beneath Vespene cleaning bath (abd) had some corrosion, previous storage locations for T-20 and T-21 - petroleum/oil staining. The exhibit.	This area has historically been used for hazardous waste storage, and evidence of release to the environment has been identified. A pump is present in the vicinity of the area of release. It is GSI's experience that historical sumps and drains, other buried waste and contaminants and release contaminants to the environment, and the presence of hydraulic oil leaking from equipment in the area is indicative of a release to the environment and is considered a REC.
61W	30	4 Garages North of Hangar 1 - The garages are constructed of corrugated steel containing rolling doors. An overhead crane was present. The garage contains four drains and may be connected to a sump feature associated with Hangar 1 (61W-30). There appears to be a patch around ceiling and western garage. Steam cleaning room: contained gift blast machine used to clean parts (waste collected in baghouses and stored), drum-rinsing area (waste water collected and pumped to T-23). Photographs of the steam cleaning room and drum rinsing area are included in a 2005 Memorandum, Waste Characterization and Management Laboratory, Superfund Investigation.	It is GSI's experience that parts cleaning equipment and drum rinsing area and associated sump are indicative of a release to the environment and are considered a REC.
61W	32	Building 5 - Structure 4: Batteries, spissor lifts, golf carts, a leaking aircraft cart, a power pack cart leaking oil, 3 totes of empty lubricant oil in the back of a golf cart, an anti-freeze container open with contents inside, tie boxes, portable airplane hydraulic repair lifts, stands, welders, and aviation electronic equipment.	The observed release to the environment of hazardous substances or petroleum products is a REC.
61W	32	Building 5 - Outside storage area: A continuation of the inside contents. Trailers, portable airplane hydraulic repair lifts, ducting, crane lifts, airplane equipment, batteries, possible oil tank trailer, and Air Force portable air conditioner trailers with air compressor inside.	The observed release to the environment of hazardous substances or petroleum products within Building 5, Structure 4 is a REC.
61W	37	Historical USTs Historical documentation identifies this as the approximate historical location of USTs: -One (1) 6,000-gallon standard solvent UST (UST 1) -One (1) 6,000-gallon standard solvent UST (UST 2) with oil/water separator.	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.
61W	38	Historical USTs- Historical documentation identifies this as the approximate historical location of USTs: -One (1) 6,000-gallon calibration fluid UST (UST 3) -One (1) 3,000-gallon calibration fluid waste UST (UST 4).	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.
61W	39	Historical USTs- Historical documentation identifies this as the approximate historical location of USTs: -One (1) 6,000-gallon gasoline UST (UST 5) -One (1) 6,000-gallon diesel UST (UST 6) -One (1) 6,000-gallon diesel UST (UST 7).	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.
61W	40	Historical USTs- Historical documentation identifies this as the approximate historical location of USTs: -One (1) 250-gallon calibration fluid waste UST (UST 8).	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and release contaminants to the environment.
61W	41	Historical USTs- Historical documentation identifies this as the approximate historical location of USTs: -One (1) 6,000-gallon calibration fluid UST (UST 9) excavated and removed in 1992. -One (1) 2,000-gallon calibration fluid waste UST (UST 10).	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.
61W	45	Historical USTs - Historical documentation identifies this as the approximate historical location of "Tank 12 and Tank 13 (removed)" was identified during this investigation. SBICFD records include "Figure 1" identifying "Underground Storage Tank Locations." Historical documentation identifies 14 USTs total in the area.	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.
61W	44	Historical USTs- Historical documentation identifies this as the approximate historical location of "Tank 14 (removed)". No additional information was identified during this investigation.	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.

Parcel	Map Feature Number	Description	Explanation of REC
61C	4	Historical Clarifier with Wash Racks and Surface Staining - Concrete pad with former tracks for sliding doors to possibly a small former aircraft hangar. Drainage channel around the concrete pad (former wash rack) with red staining and the outline of ASTs. Nearby drain inlet may be connected to a possible 3-stage clarifier.	It is GSI's experience that clarifiers and wash racks are known to leak contents to the subsurface and impact the vadose zone with petroleum products. Additionally, red staining indicates that fire retardant was released to the environment from historical ASTs. An observed release to the environment and conditions indicative of a release to the environment are a REC.
61C	8	Historical Clarifier- Possible former clarifier. A long trench appears to extend from a drain inlet that it may have been connected to.	It is GSI's experience that clarifiers are known to leak contents to the subsurface and impact the vadose zone with petroleum products or other waste. The former presence of the clarifier is indicative of a possible release to the environment and is a REC.
62	2	Historical Clarifier- Historical documents and S&S reconnaissance identified a four-stage clarifier to the north of 62-8. SBFD records from 23 October 2002 indicate that the "sumps" were tested and "spill boxes" - visual fail due to extreme rust and corrosion as per inspectors orders.	It is GSI's experience that clarifiers are known to leak contents to the subsurface and impact the vadose zone with petroleum products. Evidence of rust or corrosion to the clarifiers indicates that these may have released contaminants to the environment. The presence of a clarifier is indicative of a release to the environment and is a REC.
62	5	Guardian Jet Center East - Corrugated steel and stucco structure containing a concrete slab office space, a reception desk, restrooms, kitchen, and conference room are present within the northern portion of the hangar. Inside the hangar were a machine shop, Amazon aircraft pods, propane bottles, tools, air compressor, circuit breakers, a water heater, oil cans, and an IT room. Within the northwestern portion of the hangar and adjacent to the office space were an above ground AFFF fire suppression tank and three, 250-gallon capacity Ansulde totes that contain AFFF. The	It is GSI's experience that AFFF Fire Suppression chemicals and equipment may release PFASs to the environment. The observation of fire suppression equipment is a condition indicative of a release to the environment and is a REC.
62	8	Guardian Jet Center (southern building) - Corrugated steel structure, concrete slab, floor drains, overhead fire water lines connected to an AFFF fire suppression system, overhead electrical, and floor drains. The hangar is used for storage and maintenance. Other observations include a sand blast machine, six (6) oxygen tanks, four (4) oil drums (for waste and Jet-A), one (1) drum containing a gasoline label and one (1) drum containing an oil label - both partially filled. Used oil filters and absorbent pads present on the lid of the drums (not contained). Other features include a flammable container locker, grease guns, absorbent on the ground, a nitrogen tank, a jet oil cabinet with oil and filters, and a poly drum with unknown liquid is full. One AFFF fire suppression system above ground storage tank, a portable fire extinguisher, a motorized hangar doors, and 4-deep cycle batteries. The AFFF suppression tank contains a label indicating a construction date of 1988. Stairing residue present on the outside of the tank. Batteries contained inside a plastic box, a lavatory service cart, and shop sinks with household cleaners and a washing machine also were observed. One storage room was located upstairs containing computer equipment (parts, files, empty boxes, packaging, printers, office furniture, and aircraft tires. Fire suppression piping inside the upstairs room appears to have leaked from fittings onto plywood flooring. Office space is located along the west side of the Hangar. The office spaces contain a restroom, a storage room, an IT room and empty storage room.	Unmarked drums, drums that were missing screw caps, used oil filters, general staining on the floor, and staining on the AFFF AST were observed at the Site. It is GSI's experience that AFFF Fire Suppression chemicals and equipment will release PFASs to the environment and generally poor housekeeping is a source of impact to the environment. The observation of fire suppression equipment as well as generally poor housekeeping in the vicinity of waste storage are conditions indicative of a release to the environment and considered a REC.
62	9	Historical Clarifier - Historical documents and Site reconnaissance identified a four-stage clarifier to the south of 62-9. SBFD records from 23 October 2002 indicate that the "sumps" were tested and "spill boxes" - visual fail due to extreme rust and corrosion as per inspectors orders.	It is GSI's experience that clarifiers are known to leak contents to the subsurface and impact the vadose zone with petroleum products. Evidence of rust or corrosion to the clarifiers indicates that these may have released contaminants to the environment. The presence of a clarifier is indicative of a release to the environment and is a REC.
62	13	Former Beechcraft West Fuel Farm where seven USTs were historically located Currently a large gravel patch at the southern border of the UPS parking lot (62-15). Historical documents identify the former Beechcraft West fuel farm at the southern border of 2161 East Avion. The fuel farm contained seven USTs with a capacity of 88,000 gallons. The USTs were reported to have been removed in May 2013. Soil samples collected during the excavation were all non-detect except for the samples collected beneath UST 17. Hydrocarbon odors and stained soil were noted in the samples. The area under the UST was excavated to a depth of 21 feet with lateral dimensions of 10 feet by 7 feet, until stained soil was no longer visible. It was	Some remaining impact appears to have been left below the area of UST 17. No closure documents were identified during this investigation. The removal of USTs without closure documentation and documented impact remaining in the subsurface beneath a former UST is a REC.
68	2	Historical Clarifier and Wash Rack - A former wash rack containing a large concrete pad and former drain inlet were observed. The drain inlet appears to be backfilled and may have been connected to former clarifier to the south.	It is GSI's experience that clarifiers and wash racks are known to impact the subsurface with the chemicals washed from equipment. The presence of a wash rack and potential clarifier is indicative of a release to the environment and is a REC.
68	6	Historical USTs - Two rectangular concrete pads separated by a gravel field were observed. The southern most patch is next to a panel labeled "control switch for north east floodlights is located at N.E. corner of fuel dump fence." A 1995 UST Closure Report (El Capitán) indicates that the USTs were removed, and impacted soil was excavated and removed. Confirmation samples from the USTs and fueling pad area were collected and "no further action" was recommended for the former USTs. However, no documentation of regulatory closure of the UST area was identified.	The USTs were closed and no further action was recommended. However, no documentation of regulatory closure of the UST area was identified during this investigation, so this area is considered a REC.
68	7	Historical USTs - The Site reconnaissance and historical documentation identifies a large gravel area near 68-6 which is a former UST area that has been backfilled. A 1995 UST Closure Report (El Capitán) indicates that the USTs were removed, and impacted soil was excavated and removed. Confirmation samples from the USTs and fueling pad area were collected and "no further action" was recommended for the former USTs. However, no documentation of regulatory closure of the UST area was identified during this investigation.	
68	12	Historical Autoshop and Fire House - A former Autoshop (1997) and Fire House (2001) - The building is constructed of concrete (painted), containing a concrete floor slab.	Although documented use of Fire Suppression chemicals was not observed during the reconnaissance, it is GSI's experience that Fire Suppression chemicals are a source of contaminant release to the environment. The observation of fire suppression equipment is a condition indicative of a release to the environment and is a REC.

Parcel	Map Feature Number	Description	Explanation of REC
88	17	Boiler room - Construction materials appear to be brick exterior walls and a concrete floor slab. The boilers appear to have been constructed in 1952 (placard present). Other equipment/materials observed in the boiler room include a hot water tank, electrical main circuit breaker, air compressors, a water heater, and associated electrical panels and plumbing for the boilers. A waste oil drum (55-gallon capacity) with a secondary containment drip pan is present. The drip pan appears to contain oil. An additional 55-gallon capacity drum (appears to be full) and 5-gallon capacity bucket (1/3 full) were present. A larger blue drum (approximately 85 gallons) is 1/4 full that is connected to an "ultrafilter" system.	An observed leaking waste drum located within a containment drip pan is representative of historical use and indicative of release to the environment and is a REC.
88	20	Historical USTs - A 1995 Report (El Capitán, 1995 - Figure 3) indicates that one UST was removed from this area. However, a 2001 Phase I ESA (CTL Environmental Services) indicates that two USTs were located in this area and the second UST was not identified. A backfilled asphalt patch is located to the west of the boiler room. This is the location of a possible former diesel UST. A trench connects to this patch from 68-25. A 1995 UST Closure Report (El Capitán) indicates that these USTs were removed, and impacted soil was excavated and removed. Confirmation samples were collected and "no further action" was recommended for the former USTs. However, no documentation of regulatory closure was identified during this investigation. In addition, a 2001 Phase I ESA indicates that a second UST was present in this area and was not accounted for during the removal of the USTs.	The USTs were closed and no further action was recommended. However, no documentation of regulatory closure of the UST area was identified during this investigation. In addition, a 2001 Phase I ESA indicates that a second UST was present in this area and was not accounted for during the removal of the USTs. The potential presence of a remaining UST as well as the lack of documented closure for the UST that was removed in this area is a REC.
88	22-1	Historical Clarifier - Building #1 contains block walls, HVAC system, a collapsed roof, deteriorated wood roof, and a concrete floor. There are five rooms within the building and a possible clarifier located south of the building.	It is GSI's experience that clarifiers are known to leak contents to the subsurface and impact the vadose zone with petroleum products or other waste. The former presence of the clarifier is indicative of a release to the environment and is a REC.

Controlled Recognized Environmental Conditions (CRECs)

CRECs are defined in the ASTM Standard as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. (for example, property use restrictions, or engineering controls)."

This Phase I ESA has revealed no evidence of CRECs in connection with the Site with the exception of those identified in Table 1 and on Figure 3. CRECs included in Table 1 are summarized below.

Parcel	Map Feature Number	Description	Explanation of REC
81W	8 and 42	Historical USTs with Removal documentation - Historical documentation identifies this as the approximate historical location of USTs. One (1) 2,000-gallon Jet-A UST (UST 11), excavated and removed in 1992.	Dames and Moore (1992) collected samples during UST removal and identified Jet-A fuel impacts that decreased with depth to the total depth of the excavation of 14 feet. A 2 April 1992 letter from the County of San Bernardino EHS indicates that UST 11 was removed and soil impacted with Jet-A was identified to attenuate to a depth of 14 feet bgs. It appears that the impacted soil was left in place and the SBDEH noted that it was "unlikely that existing contamination poses a threat to the local environment." Additional reference to the "excavation of the Calibration Fluid" notes that the actual extent of affected soil "will be more thoroughly defined after removal activities recommence for Tank 9 and the adjacent Tank 10 (also containing Calibration Fluid)." The remaining impacted soil with documented approval from SBDEH is a CREC.
81W	42 and 8	Same as 81W-8	Same as 81W-8

Historical Recognized Environmental Conditions (HRECs)

HRECs are defined in in the ASTM Standard as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, or engineering controls).”¹

This Phase I ESA has revealed no evidence of HRECs in connection with the Site.

De minimis Conditions

De minimis conditions are defined in in the ASTM Standard as: “a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not recognized environmental conditions or controlled recognized environmental conditions.”

This Phase I ESA has revealed no evidence of *de minimis* conditions in connection with the Site with the exception of those identified in Table 1 and on Figure 3. *De minimis* conditions identified in Table 1 are summarized below.

Parcel	Map Feature Number	Description	Explanation of de minimis Condition
Site-Wide	Site-Wide	Historical Agriculture - According to documented history of the Site, until the mid to late 1950's the Site was primarily agricultural with some vineyards.	Pesticides and arsenic are often present in shallow soil at properties that have documented historical agricultural practices. As the Site will remain paved and residential use of the Site is not planned, the potential for these contaminants of concern in shallow soil is unlikely to be the subject of an enforcement action if brought to the attention of appropriate governmental agencies and is considered a <i>de minimis</i> condition.
61W	11	Hanger 3 - Constructed of painted corrugated steel, epoxy coating on the roof, a concrete slab, trench drains in front of the roll-up doors, transformers, a fire line, fire extinguishers, overhead lighting and HVAC, restrooms, false walls, water heaters, a 5 gallon paint bucket, a circuit board, a server room, and broken glass windows. Historical records identify this building as the former "Machine Shop and Heat Treat" (Catonie Environmental, 1993)	It is GSI's experience that machine shops are often sources of contaminant release to the environment; however, the Site reconnaissance did not identify anything that would be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. As such, the historical use of Hanger 3 is considered a <i>de minimis</i> condition.
67	5	Shooting Range - Historical documents identify that the area around Parcel 67 and 68 included a skeet shooting range in the mid-1940's	Shooting ranges are often sources of subsurface impact to soil from metals such as lead. However, the location of the shooting range was not identified during this investigation and the entire area is covered with concrete and asphalt. As such, the historical use of the area as a shooting range is subject of an enforcement action if brought to the attention of appropriate governmental agencies and is considered a <i>de minimis</i> condition.

Conclusion and Opinion

GSI has evaluated the information collected during the course of this Phase I ESA. Historical Site use indicates the presence or likely presence of hazardous substances or petroleum products that are indicative of a release to the environment at several areas across the Site. It is GSI's understanding that the potential redevelopment of the Site will likely include demolition of existing structures and excavation of shallow vadose zone soils prior to redevelopment of the of the Site. As such, it is GSI's opinion that a baseline understanding of the existing subsurface conditions will be necessary to assess the potential risk to human health in the proposed structures, and to document the conditions present at the Site prior to Site redevelopment and reuse. In addition, a

¹ If the Site has received closure in the past, but a review of the closure information indicates that Site conditions do not meet unrestricted/residential land use standards, the Site is no longer considered an HREC, and must be identified as a REC.

Soil Management Plan (SMP) should be implemented during Site redevelopment as a best management practice.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
 Magellan Airport Cargo Distribution Center
 97-Acre Portion of the Ontario International Airport, Ontario, California

1.0 INTRODUCTION

This Phase I environmental site assessment (ESA) was conducted to fulfill American Society for Testing and Materials (ASTM) International, Inc. Standard E 1527-13, Standard practice for Environmental Site Assessments (ESAs): Phase I Environmental Site Assessment Process (ASTM Standard) and the EPA Standards and Practices for All Appropriate Inquiries ([AAI] 40 CFR Part 312) for the property identified below (Site; Figures 1 and 2).

SITE IDENTIFICATION	
Name:	Proposed 97-Acre Project Magellan Airport Cargo Distribution
Address:	97-Acre Portion of the Ontario International Airport
City:	Ontario
County:	San Bernardino County
State:	California
Assessor Parcel Number(s):	Parcel 61: 011326106 (approximately 48 acres) Parcel 62: 011326107 (approximately 21 acres) Parcel 63: 011326108 (approximately 2 acres) Parcel 67: 011327101 (approximately 12 acres) Parcel 68: 011327102 (approximately 14 acres)

1.1 Purpose of the ESA

The purpose of the ESA was to identify Recognized Environmental Conditions (RECs) as defined in the ASTM Standard. It is our understanding that this Phase I ESA has been solicited as part of environmental due diligence activities in connection with the land lease and redevelopment of the Site.

1.2 Significant Assumptions

Significant assumptions include the following:

- During the Site Reconnaissance, several unknown patches were observed throughout the Site. Due to the quantity and size of the Site, these unknown patches are assumed to be a result of historical airport maintenance and improvements and are assumed to not be a threat or future threat to the environment.
- Based on the age of the buildings and features observed during the Site Reconnaissance, it is assumed that asbestos-containing building materials (ACBM), and lead-based paint are present throughout buildings at the Site.
- In many cases, records that were obtained from agency sources or historical reports did not include detailed figures or included figures that were either scaled too large or without details to accurately identify sampling locations. As such, the locations of some features were estimated based on correlating descriptions with observations during the reconnaissance. As a result, it was not possible to positively identify or match several of the identified features in the historical reports.

1.3 Limitations

GSI has completed this Phase I ESA in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment. This Phase I ESA is not and should not be construed as a warranty or guarantee, expressed or implied, regarding the presence or absence of environmental contaminants that may affect the Site. All findings, opinions, and conclusions reported in this Phase I ESA are based on conditions and available information existing at the time of the assessment. No independent verification of the information provided to GSI was made. While GSI has no reason to doubt the accuracy of the information provided, this report is accurate and complete only to the extent that information provided to GSI was itself accurate and complete. Site conditions and regulations (local, state, tribal, and federal) can change over time. Therefore, changes in Site conditions, available information, and/or regulations may alter the findings, opinions, and conclusions of this Phase I ESA.

1.4 Non-Scope Considerations

Non-scope considerations include environmental issues or conditions that may warrant additional assessment but are outside the scope of the ASTM Standard. Environmental issues that are considered non-scope considerations are summarized in the ASTM standard and include but are not limited to; ACBM, indoor air quality, lead-based paint, mold, and radon. GSI was not retained to evaluate non-scope considerations as part of this ESA.

1.5 User Reliance

This report and all related correspondence have been prepared exclusively for use by Mr. Winters and may not be relied upon by any other person or entity without the express written permission of GSI and Mr. Winters. Without express written permission of both GSI and Mr. Winters, no third parties shall have any rights of recourse or recovery under course of action against GSI, its officers, employees, subcontractors, vendors, or successors.

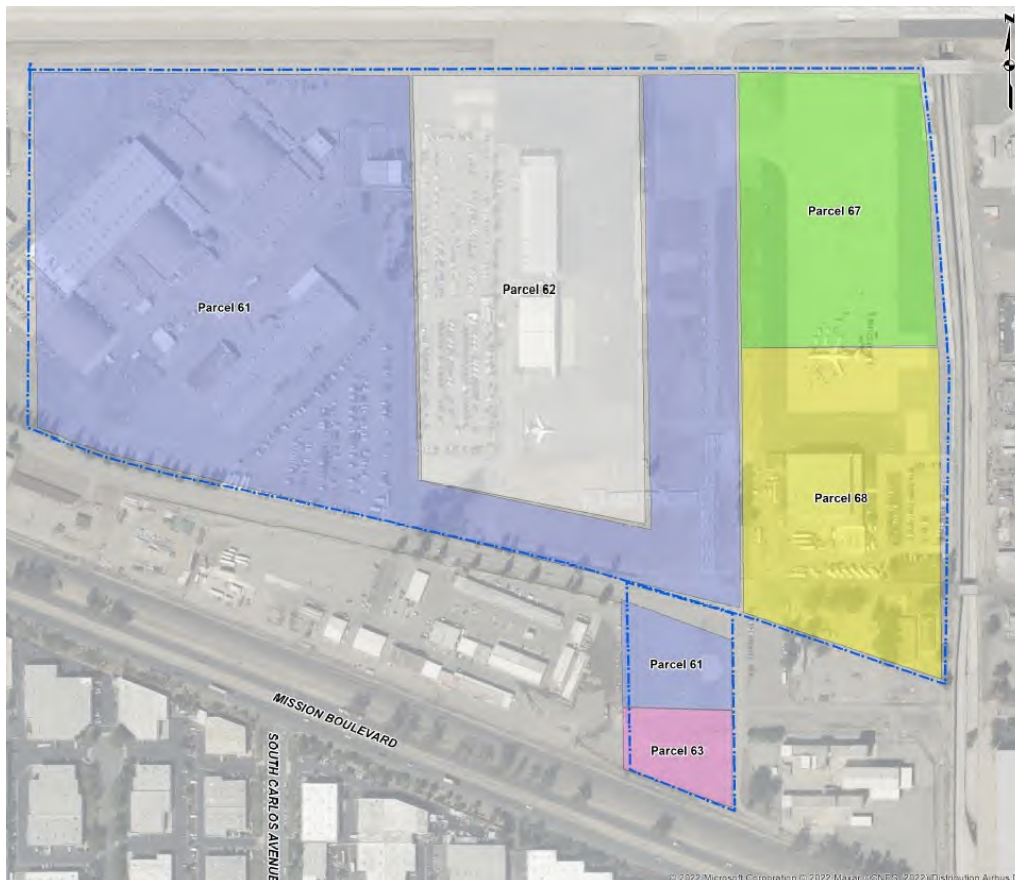

2.0 SITE DESCRIPTION

GSI contracted with Environmental Risk Information Service (ERIS) to compile a physical setting report (Appendix A) that was used in combination with information obtained during Site reconnaissance, historical document review, interviews with the Site owner representatives during reconnaissance, review of regulatory agency records, and review of prior Site reports provided to GSI (if applicable) to produce a description of the Site and its physical setting.

2.1 Current and Past Site Use

The Site is comprised of portions of five parcels on the Ontario Airport property.

- Parcel 61/APN 011326106 (approximately 48 acres)
- Parcel 62/APN 011326107 (approximately 21 acres)
- Parcel 63/APN 011326108 (approximately 2 acres)
- Parcel 67/APN 011327101 (approximately 12 acres)
- Parcel 68/APN 011327102 (approximately 14 acres)

Operations at the Ontario Airport began in 1921 when the Ontario Aircraft Corporation was organized. In 1929 it moved to a 30-acre parcel near the corner of Mission Boulevard and Grove Avenue in the southwestern corner of the final airport. In 1940 an additional 405 acres were added to the airport property. Until the mid to late 1950's the Site was primarily agricultural with some vineyards. In the 1940's some vineyards were removed to construct portions of the airport. The Ontario Airport was utilized in support of World War II and after the war it was returned to the City of Ontario.

2.1.1 Parcel 61 History

Hangars 1 through 5 exist on the western portion of Parcel 61. Hangars 1 and 2 were constructed in the late 1940's and in 1950 Northrop Aircraft Company reportedly began manufacturing operations in Hangar 1. Hangar 3 was constructed in 1951 and some time before 1953 Douglas Aircraft began operations in Hangar 2 or 3. In 1953 Hangar 4 was constructed and Lockheed Aircraft occupied Hangar 4 between 1955 and 1980. Hangar 5 is currently utilized for storage and administration. In approximately 1955, GE Engine Services, Inc. (GEES) moved operations to the Site and Northrop vacated the Hangar 1. GEES moved to Hangar 4 once Lockheed vacated the building in 1980. The former LAPD Emergency Vehicle Operations Course (EVOC) was previously located in the center of the Site along the western border of Parcel 62.

2.1.2 Parcel 62 History

This portion of the Site was primarily agricultural through the 1970s. In 1983 the main Hangar and office building were developed, and by 1987 the second Hangar was in use. By 1994 the

outbuilding maintenance area was constructed and put into service. A fuel farm existed on the southwestern corner of the Site and at least two clarifiers and a maintenance shop have been documented at the Site. The former LAPD EVOC was previously located in the center of the Site along the western border of Parcel 62. Between 2002 and 2008 Parcel 62 did not change significantly (CTL, 2008). Parcels 67 and 68 History

The area around Parcel 67 and 68 included a skeet range in the mid-1940's. The Ontario Air National Guard Station (ANGS) was located on Parcel 68 with ancillary structures to the south and east. From 1943 to 1948 the army maintained the area and in 1952 the 196th Tactical Air Support Group was assigned to Ontario Airport. The facilities were updated at this time and the operations included maintenance of aircraft vehicles, and aerospace ground equipment. In the 1950's, a Hangar, fire station, fueling station, and wash rack were constructed over the skeet range. A munitions bunker was constructed in the 1950s and later used by Lockheed in the 1990s for storage of ammunition and explosives. The 196th vacated the Site in 1983 and the 148th Combat Communications Squadron (CBCS) occupied the Site from 1984 through 1998. The ANGS was closed in September 1998.

2.1.3 Southern Parcels 61 and 63 Parcel History

The southern portion of the Site is comprised of small portions of Parcel 61 and Parcel 63. This location has been agricultural and utilized for parking. It includes a large storm drain outlet.

2.1.4 Parcels 67 and 68 Parcel History

Parcels 67 and 68 historically included the Ontario ANGS with ancillary structures to the south and east. In the 1950s, a Hangar, fire station, fueling station, and wash rack were constructed at the Site. In 1952, the 196th Tactical Air Support Group was assigned to the Ontario Airport. During this time, the facilities were updated, and operations included the maintenance of aircraft vehicles and aerospace ground equipment. A munitions bunker was constructed in the 1950s and later used by Lockheed in the 1990s for storage of ammunition and explosives. The 196th vacated the Site in 1983 and the 148th Combat Communications Squadron (CBCS) occupied the Site from 1984 through 1998. The ANGS was closed in September 1998.

2.2 Site Physical Description

SITE DETAILS	
Physical Description:	Large airport facility consisting of 24 buildings and Hangars, ancillary structures, and parking facilities. The Site is north of East Avion Street and to the west of the Cucamonga Creek.
Roads:	The Site is located along East Avion Street and ends before reaching the Cucamonga Creek channel. A small portion of the Site connects to South Hellman Avenue.
Parking Facilities:	The Site is utilized for parking large trucks, storage containers, planes, and employee's cars. The primary parking facilities are next to the Ontario International Airport Authority Offices, Guardian Jet Center Hangars, and UPS parking lots. A ramp space on the eastern side of the Site is also used to park planes on.
Site Zoning:	Airport and Industrial
Vicinity Zoning:	Industrial
Site Size (acres):	97 acres
Current Property Use:	Airport maintenance, storage, administration, and filming.
Surface Drainage Direction:	Towards storm drains located on the Site, and then southeast towards the Cucamonga Creek on the eastern side of the Site.

BUILDING DESCRIPTION – Parcel 61	
Number of Buildings:	Fourteen buildings and ancillary structures present.
Building Age:	The first two Hangars were built between 1938 and 1958 based on aerial photographs. The third Hangar was built between 1948 and 1952 based on aerial photographs. Ancillary buildings next to Hangar 1 were built in 1953 based on USGS Topographic maps. According to aerial photos and USGS topographic maps, between 1953 and 1960, the fourth Hangar and ancillary structures next to Hangar 2 are built. Based on aerial photos, between 1960 and 1966 more ancillary structures next to Hangars 1 and 2 are built, including 61W-18 and 61W-22. Between 1966 and 1974 building 61W-32 was built to the north of Hangar 1, according to aerial photographs. Between 1977 and 1980, the large administration building was built and then expanded to connect to Hangar 2 between 1980 and 1985, according to aerial photos.
Building Details	Most buildings were observed to be vacant or used for storage and filming purposes. Building 61W-17 is connected to 61W-18 and the Ontario International Authority Offices building. Buildings 61W-14 and 61W-16 were observed to be connected. Buildings 61W-30 and 61W-22 were also connected.
Basements:	None.
Building Square footage:	Hangars 1, 2, and 3 are approximately 24,000 sf (sf). The large building connected to Hangar 2 is approximately 78,000 sf. The small building connected to the south of Hangar 2 (61W-18) is approximately 6,000 sf. The building to the east of Hangar 2 (61W-20) is approximately 6,500 sf. The structure to the south of Hangar 1 (61W-22) is approximately 27,500 sf. The building to the north of Hangar 1 (61W-32) is approximately 27,000 sf. Hangar 4 is approximately 70,000 sf. The air museum (61W-13) is approximately 7,000 sf. The former N.D.T Lab (61W-16) is approximately 6,800 sf, and 61W-15 is approximately 2,850 sf. Building 61W-29 is approximately 3,000 sf.
Building Occupants:	Airport personnel.
Building Operations:	Airport offices, storage, maintenance, museum, filming.
Building Interior Hazardous Substance Use or Presence:	Leaking 5-gallon buckets of fire suppression chemicals inside Hangar 4 (61W-1). Hazardous Substance Storage building (61W-23). Cleaning sump inside Hangar 1.
Building Exterior Hazardous Substance Use or Presence:	Former USTs and ASTs. Hazardous Substance Storage awnings.
Other:	No access was granted inside of 61W-15, 61W-26, 61W-29, 61W-30A, 61W-30B.

BUILDING DESCRIPTION – Parcel 62	
Number of Buildings:	Two Hangars.
Building Age:	Guardian Jet Center East was built between 1981 and 1985 based on aerial photographs and USGS topographic maps. The southern Hangar was built between 1985 and 1994 based on aerial photographs.
Building Details	Each building was observed to be an airplane Hangar used for storage and maintenance of small planes with office spaces surrounding the main Hangar space.
Basements:	None.
Building Square footage:	The Guardian Jet Center East Hangar is approximately 38,000 sf. The Guardian Jet Center southern Hangar is approximately 21,000 sf.
Building Occupants:	Guardian Jet Center.
Building Operations:	Airplane maintenance and storage. Office spaces.
Building Interior Hazardous Substance Use or Presence:	AFFF suppression system. Petroleum products.
Building Exterior Hazardous Substance Use or Presence:	Clarifiers. Former wash rack with staining and drainage channel observed.
Other:	The former Beechcraft West fuel farm is located at the southern end of Parcel 62.

BUILDING DESCRIPTION - Parcel 63	
Number of Buildings:	None, the area is currently vacant.

BUILDING DESCRIPTION – Parcel 67	
Number of Buildings:	None, the area is currently used as a ramp space for airplanes to park on.

BUILDING DESCRIPTION – Parcel 68	
Number of Buildings:	Five buildings are present at the former National Guard Hangar. The former Cal Air National Guard maintenance yard contains three more buildings.
Building Age:	The former National Guard Hangar, the former Auto shop/Fire House, and boiler room next to the Hangar were built between 1953 and 1960 based on aerial photos and USGS topographic maps. The motorcycle shop was built between 1960 and 1966 according to aerial photos and USGS topographic maps. The ancillary structure to the west of the motorcycle shop was built between 1966 and 1977 according to aerial photos. The remaining buildings within the maintenance yard were built between 1960 and 1966 according to aerial photographs.
Building Details	All buildings were observed to be vacant and deteriorating besides the former Cal Air National Guard Hangar. The Hangar itself is used for filming purposes. A deteriorating U-shaped building surrounds the main Hangar that was formerly used for maintenance and operations.
Basements:	None.
Building Square footage:	The former National Guard Hangar is approximately 45,000 sf and the Auto shop/Fire House is approximately 2,500 sf. The motorcycle shop is approximately 5,000 sf. The boiler room and ancillary structure are approximately 1,000 sf each. The largest building in the maintenance yard is approximately 7,700 sf. The building directly east to that is approximately 4,000 sf. The largest building in the maintenance yard is approximately 7,700 sf. The building directly east to that is approximately 4,000 sf. The third building is approximately 3,000 sf.
Building Occupants:	Vacant.
Building Operations:	The former National Guard Hangar is used for filming.
Building Interior Hazardous Substance Use or Presence:	Boiler room contains petroleum products. Possible AFFF associated with former Fire House operations.
Building Exterior Hazardous Substance Use or Presence:	Former USTs. Historical clarifier.
Other:	Two sheds were present at the maintenance yard.

SITE UTILITIES	
Sewage:	City of Ontario
Electricity:	Southern California Edison Electric
Potable Water:	City of Ontario
Heating System:	Unidentified
Cooling System:	Unidentified
Gas:	Southern California Edison Gas
Other:	None

2.3 Surrounding Properties

SURROUNDING PROPERTIES	
Direction	Address and Use
North:	Runways used by the Ontario International Airport, former Southern Pacific Railroad tracks, airport terminals, parking lots, Prime Flight Aviation Services, Airline Cargo Hangars, commercial facilities
Northeast:	Car rental businesses, commercial facilities
East:	Dirt lot, Industrial and some commercial facilities, large warehouses (WAHCA UPS), UPS Airlines
Southeast:	Heavy industrial facilities
South:	East Ontario Metrolink, airport maintenance, industrial and commercial facilities
Southwest:	Heavy industrial, commercial facilities
West:	Guardian Jet Center, FedEx facilities, industrial and some commercial
Northwest:	Residential and commercial, car rental businesses, light industrial on airport grounds, FedEx facility

2.4 Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

The Site lies within the Chino Basin, a managed groundwater basin that supplies groundwater for municipal, industrial, and agricultural uses. The Chino Basin is an adjudicated basin, with water rights controlled by the Chino Basin Watermaster, in accordance with the Chino Basin Master Plan. The Inland Empire Utility Agency and the Chino Basin Watermaster manage the Chino Basin water supply through a network of stormwater management channels and percolation basins developed to enhance groundwater recharge. The Ely Basins, located southwest of the Site (Figure 1), are a component of this recharge system (Wood, 2019).

Groundwater elevations across the Site have historically ranged between 600 and 645 feet above mean sea level. From 1990 through around 2010, groundwater elevations were generally in a decline with a seasonal variation. Between 2010 and 2015, groundwater elevations increased about 15 feet. This increase is tribute to increased recharge and decreased municipal pumping in the vicinity of the Site. Since 2016, groundwater elevations appear to have stabilized. Groundwater flow direction is predominantly to the southwest near the Site and west-southwest downgradient of the Site.

The Site is located in the Upper Santa Ana Valley, which is bounded by the San Gabriel Mountains and the Cucamonga fault to the north, the Colton-Rialto fault to the east, the Puente Hills and Chino fault to the west, and the Chino Hills, Chino fault, and Santa Ana River to the south-southwest (CDWR, 2006). From the surface to approximately 45 feet below ground surface (bgs) are well graded sand with some fines and gravel. Sandy silt and silt are present beneath the Site

at depths between 45 and 57 feet bgs followed by grained sand to approximately 80 feet bgs (Burns & McDonnell, 2014). Based on observations during Alta’s investigation, soil beneath the Site generally consisted of silty sand from the surface to depths explored (10 feet bgs) (Alta, 2020).

Based on the most recent groundwater monitoring data available for the General Electric (GE) Company – Jet Engine Test Cell Facility, located adjacent to the Site, depth to groundwater ranges between 229.61 feet and 265.27 feet below top of casing (TOC) with a groundwater flow direction to the southwest (Wood, 2019).

The Site is located approximately 910 feet above mean seal level (msl) according to the United States Geological Survey (Ontario) 7.5 Minute Topographic Quadrangle map. The Site and surrounding topography slope to the southeast. Surface drainage at the Site currently flows to the south towards catch basins which discharge into three drainage area channels, the West Cucamonga Channel Drainage Area, the Cucamonga Channel Drainage Area, and the Deer Creek Drainage Area. The water is then discharged into the Cucamonga Creek, located on the eastern border of the Site.

Groundwater in the Chino-San Bernardino Basin at the former Ontario ANGS is bounded by the impermeable rock of mountains and hills to the north, west, and south, the Rialto-Colton barrier fault on the east, and the San Jose fault on the northwest. Groundwater occurs primarily within the confined, permeable alluvial sediments interbedded with discontinuous lenses of fine-grained material. The water table in the area of the station is approximately 250 feet bgs and groundwater flow is generally to the west-southwest. Recharge occurs primarily at the northern margin of the basin via infiltration of runoff from the San Gabriel Mountains. Discharge occurs from pumping of wells for agricultural and municipal use and as outflow to the Santa Ana River (Earth Technology Corporation, 1993).

Soils at the former Ontario ANGS are of the Tujunga soil series, which are characterized as nearly level to moderately sloping (0 to 5 percent) soil that formed on alluvial fans in granitic alluvium. The surface layer, which can be up to 10 inches in thickness, is a slightly acidic, brown, loamy sand. The substratum, which can be up to 54 inches in thickness, is a pale brown, coarse sand that is slightly acidic. In some areas, the substratum is composed of gravel that may range from 0 to 30 percent by volume (Science & Technology, Inc. 1990).

Surface drainage is controlled by curbs, gutters and drain inlets and is discharged to the municipal storm drain system. Drain towards the south

SITE DATA	CURRENT AVAILABLE INFORMATION (with Source)
Depth to Groundwater:	229 to 265 below grade (Alta, 2020)
Closest Surface water:	Cucamonga Creek
Groundwater Gradient:	Southwest and west-southwest

3.0 SITE RECONNAISSANCE

A Site reconnaissance was performed on 20, 21, and 22 October 2021 to observe current Site conditions and identify and document potential notable environmental conditions. GSI representatives Vincent Robino and Erika Anderson were accompanied by Nicole Walker, Environmental Planning Manager for Ontario International Airport Authority (OIAA), Cedric Sampson, Airport Security Consultant, and Dan LeBouf of Guardian Jet Center on 20 October 2021. On 21 and 22 October, GSI representatives were escorted by Elisa Grey, Director of

Commercial Real Estate for OIAA, and David Becerril, OIAA Facilities Supervisor. Observations during the reconnaissance are summarized in the table below. Photographs taken during the Site reconnaissance are included in Appendix B.

Observations of Site conditions that may indicate the likelihood of an REC in connection with the Site are discussed in the following Sections. If the observation is indicated with a “yes”, a summary of information related to that item is included below, with more detailed information included in Table 1.

GENERAL OBSERVATIONS	Unknown	YES	NO
Heating/Cooling System		X	
Hazardous Substances and Petroleum Products in Connection with Identified Uses		X	
Storage Tanks (current or removed)		X	
Wells (dry, irrigation, injection, monitoring, abandoned, etc.)		X	
Drains, Sumps, Clarifiers		X	
Odors		X	
Pools of Liquid	X		
Drums		X	
Hazardous Substance and Petroleum Products Containers (Not Necessarily in Connection with Identified Uses)	X		
Unidentified Substance Containers	X		
Air Emissions	X		
Equipment that may Contain PCBs		X	
Soil Stockpiles		X	
Pits, Ponds, or Lagoons (Site or adjoining)	X		
Stained Soil or Pavement		X	
Stressed Vegetation from Something other than Insufficient Water	X		
Solid Waste, Construction Debris, Trash Mounds		X	
Wastewater, Storm Water, Discharged Water	X		
Septic Systems or Cesspools	X		

Heating/Cooling System

Heating, ventilation, and air conditioning (HVAC) units were observed along the outside of the former National Guard Hangar, adjacent Motorcycle Shop, Hangar 1, Hangar 2, Hangar 3, and ancillary structures.

Hazardous Substances and Petroleum Products in Connection with Identified Uses

A shed to the northeast of Hangar 3 was identified as a hazardous waste storage shed. This structure was empty during the Site reconnaissance but contained a hazardous yard sign. Historical documents have also identified this location as a hazardous waste storage area. The ancillary structure next to Hangar 4 was observed to be a hazardous waste storage structure. A label on the sliding door read “hazardous waste storage.” Flammable Material storage cabinets were observed throughout the three-day Site visit.

Storage Tanks

Historical documents identified and reported the removal of multiple ASTs and USTs. A 1990 Phase I ESA indicated that there were seven USTs associated with the Beechcraft West fuel farm. This area was observed on the Site reconnaissance to be backfilled with soil and gravel. A 1995 Underground Storage Tank Closure report identifies the removal of five USTs adjacent to the former National Guard Hangar. This area was observed to be backfilled with soil and gravel. Three concrete secondary containment structures were observed where aboveground storage tanks used to be held. A UST closure report from 1992 identified five USTs to the west of where the OIAA administration building is, two USTs to the north of Hangar 1 and its ancillary structures, one UST to the northeast of Hangars 1 and 2, two USTs to the southwest of Hangar 2, and one UST to the south of the current Air Museum. Two ASTs were observed in secondary containers inside a shed at the former CANG maintenance yard. AFFF fire suppression tanks were observed inside the Guardian Jet Center Hangars.

Wells

One ground water monitoring well box was observed at the former National Guard maintenance yard but was not accessed during the Site reconnaissance. Based on the figure from a 2021 Work Plan for Soil Vapor and Groundwater Investigation provided by Wood, the monitoring well is from the former GE Engine Services Test Cell facility and is a destroyed monitoring well (Wood, 2021).

Drains, Sumps, Clarifiers

Storm drains were present throughout the Site and water collected from the ground surface is expected to drain towards the Cucamonga Creek. Trench drains were present along the sliding/roll up Hangar doors as well as floor drains inside the Hangars, buildings, and storage sheds.

Multiple clarifiers were present at the Site. Historical documents confirm the presence of these clarifiers. A 1990 and 2001 Phase I ESA identified a 2-stage clarifier on the eastern side of the former National Guard Hangar (Encorp, 1990 & CTL, 2001). A 2008 Phase I ESA identified two clarifiers adjacent to the Guardian Jet Center Hangars (CTL, 2008).

Drums

Multiple drums were observed throughout the Site. A waste oil drum (<55-gallon) within a secondary containment drip pan was observed as well as a larger drum (approximately 85 gallons) inside the boiler room. A 55-gallon drum labeled EA-200 was observed inside a shed within the former maintenance yard. Four oil drums for waste and Jet-A fuel, two gas and oil drums with absorbent pads on top, and a poly drum with unknown liquid was observed inside the Guardian Jet Center southern building. An empty 55-gallon drum labeled 1A2/Y1.2/100 was observed inside the hazardous storage Hangar adjacent to Hangar 4. Two diesel 55-gallon drums and one 55-gallon waste coolant drum in secondary containers was observed inside Building 5.

Equipment that may Contain Polychlorinated Biphenyl (PCBs)

Based on the age of the existing buildings, it is possible that PCBs were used at the Site, including in electrical transformers. Based on a 1997 Phase I ESA conducted by Encorp, PCBs were identified in the lighting fixtures at the former National Guard Hangar. A 1990 Phase I by CDM recommended the sampling of soil around the former transformer pad near the Beechcraft West Fuel Farm for PCBs, as well as the sampling of soil at a former electrical box on the eastern edge of the National Guard lease area. However, no PCBs were reported. The observed exterior transformers did not show indications of spillage or staining during the Site reconnaissance.

Soil Stockpiles

Soil stockpiles were observed at the former National Guard maintenance yard.

Stained Soil or Pavement

Multiple locations across the Site were identified to have staining. A concrete pad with red staining was observed to the east of the Guardian Jet Center Hangars. Inside of the Guardian Jet Center southern Hangar, staining was identified around the AFFF suppression system. The large hydraulic jacks adjacent to Hangar 1 were observed to be leaking oil that had stained the asphalt underneath them.

Solid Waste, Construction Debris, Trash Mounds

The former National Guard maintenance yard was observed to contain stockpiles of cobbles, gravel, asphalt, and mixed contents from previous construction activities.

4.0 HISTORICAL INFORMATION

GSI contracted with ERIS to compile historical documents for the Site and surrounding area to develop an understanding of the history of the Site. The following historical data sources were compiled and are included in the Appendices:

- Sanborn fire insurance maps (Appendix C),
- United States Geological Survey (USGS) topographic maps (Appendix D),
- Aerial photographs (Appendix E), and
- City directories (Appendix F)

Historical Source	Available Dates
Sanborn Fire Insurance Maps (SFIM)	No SFIM were found for the Site or surrounding areas
USGS Topographic Maps (USGS)	Either 7.5- or 15-minute topographic maps were available for 1987, 1900, 1903, 1953, 1954, 1966, 1973, 1981, 2015. Most topographic maps available between 1897 and 1903 were large scale and do not provide detail to decipher changes in the Site use.
Aerial Photographs (AP)	Aerial Photographs were available from 1933, 1938, 1948, 1952, 1960, 1966, 1974, 1977, 1980, 1985, 1994, 2002, 2005, 2006, 2009, 2010, 2012, 2018, and 2020.
City Directories (CD)	City Directories are available for the years 1951, 1965, 1970, 1988, 1998, 2001, 2004, 2008, 2012, 2016, and 2020.

Historical Summary (SFIM, USGS, and AP)			
Year	Source	Site Description	Adjacent Site Description
1897, 1900 and 1903	USGS	Site is vacant with paved and unpaved roads intersecting with the Site. No detailed information is shown.	North: Railroad tracks spanning from the west to east, roads Northeast: Unpaved roads and paved roads East: Sparse buildings/tanks Southeast: Building and tanks, roads South: Two buildings, boundary line Southwest: Roads West: Tank, roads Northwest: Oil tanks/buildings, roads
1933	AP	The Site appears to be vacant.	Northeast: Vineyards, creek flows south East: Creek Southeast: Creek continues, vineyards Southwest: Orchards
1938	AP	No significant change. Potential watermark stain in the middle of the vacant Site.	Northeast: Creek mark has expanded, and vineyards have almost gone away East: Creek mark expanded
1948	AP	Development on the Site has occurred. Two airplane Hangars are present in the northwest corner as well as ancillary taxiways throughout the Site.	North: Runways developed Southeast: Partial loss of vineyards and grading of land West: Development of roadways/taxiways Northwest: Airplanes are present
1952	AP	Another airplane Hangar has been built next to the others.	Southeast: Further grading of the land and loss of vineyards
1953	USGS	Map identifies three large buildings in the northwest portion of the Site. Multiple ancillary buildings are present in the northwest corner of the Site, as well as the symbol for third-order or better elevation, with tablet of 916.	North: Continuation of the Ontario International Airport; landing strips, Southern Pacific Train track running from the west to east, San Bernardino Freeway under construction, airport runways, elevation of 933 labeled in middle of runways Northeast: Building labeled winery and surrounding compound of buildings East: water tanks, structures labeled Air National Guard Southeast: Creek, well, Mountain View School in the corner South: Pacific Union railroad tracks running from the southwest to southeast, Highway 60 running along the railroad, Ontario-Upland Sewage Disposal, wells, Grant boundary line labelled Southwest: Wells at southwest corner, vineyard West: Wells and tanks, ancillary airport structures Northwest: More buildings
1954	USGS	No Significant Changes	Northeast: Winery label gone
1960	AP	Another large building is present on the Site. A parking lot has been developed. Site grounds are further paved and developed for airplane use. A large taxiway was created in the northwest portion of the site where airplanes are parked. Ancillary buildings built in the southwest portion of the Site and northwest corner.	East: Multiple structures have developed Southeast: Orchard size has decreased; building present bordering the Site South: Structures present bordering the Site

1966	AP	Two small buildings are built next to the larger one seen in 1960 and more containers are parked in the southeast and northwest corners of the Site.	East: More structures built Southeast: More buildings present
1966	USGS	No Significant Changes. Elevation of 910 recorded on contour going through the Site.	North: Parking area identified, 2 lane and 3 lane freeway intersecting Northeast: Water tank in the corner, well, borrow pit, Percolation Basin East: Structures labeled Air National Guard, well, creek that flows down from Percolation Basin Southeast: More Wells South: Wells Southwest: Percolation basins, Wells, more structures present West: Structure labeled Fire Station, intermittent stream/river that leads to Percolation Basins Northwest: Factories, Air Museum labeled, school in northwest corner of map, San Bernardino Freeway no longer under construction
1973	USGS	Structures added to already existing buildings on the Site.	Northeast: Ponds located where Percolation Basin used to be East: Air national Guard Station, secondary highway South: Highway 60 running west to east across the bottom of the map, 60 removed from highway next to railroad tracks Southwest: Increase in buildings, possible athletic field West: Fire station, railroad, increase in buildings, well Northwest: Increase in buildings
1974	AP	No detailed information is shown.	No detailed information is shown
1977	AP	More activity on Site with an increase in cars or shipping containers parked. Dark, newly paved, rectangular area in the middle of the Site.	No significant changes
1980	AP	Another building added to the upper northwest corner on the Site.	East: Land has been graded Southwest: Buildings developed Northwest: More buildings developed
1981	USGS	No Significant Changes.	Northeast: Borrow pit removed, dry ponds, wells, water tank above San Bernardino Freeway West: Fire Station removed, levee around part of intermittent stream
1985	AP	The Site has added another building in the upper-middle part.	West: More structures added directly next to the Site
1994	AP	The Site has been further developed with another building added in the middle and paved pathways	East: More buildings developed Southeast: More buildings developed South: More structures developed Southwest: More buildings have been developed
2002	AP	More activity present at the Site.	Southeast: Land is further developed South: More structures have been developed Southwest: land has been further developed
2005	AP	Parking lot developed in southern most portion of the Site.	No Significant Changes.

2006	AP	No Significant Changes.	No Significant Changes.
2009	AP	Parking lot developed in middle of the Site. Small structure removed in the middle-southern part of the Site-staining is noted where structure was removed. Staining also present in southernmost parking lot.	South: Staining present at parking spaces bordering the Southernmost part of the Site Southwest: Staining observed on property next to the Site's main facilities
2010	AP	Parking lot removed from southern most part of the Site.	South: Faint staining still present Southwest: Faint staining still present
2012	AP	No significant changes, except for small structure in northwest corner removed.	No significant changes.
2015	USGS	No detailed information is shown.	No detailed information is shown.
2018	AP	Increased activity on Site. Parked containers especially present in the middle of the Site.	South: Increased activity on surrounding structures-staining possibly covered by parked cars and containers Southwest: Old stain has darkened, and new stain has developed next to it
2020	AP	Continued increase in activity with cars replacing parked containers in the middle of the Site.	South: Faint staining is visible Southwest: Old stain is still present and new stain has been covered by parked containers

5.0 OWNER/USER PROVIDED INFORMATION AND INTERVIEWS

Several reports have been supplied to GSI. A short summary of relevant reports is included below.

5.1 1990 Phase I - Phase II ESAs

CDM, 1990, Portions of Parcels 61, 62, 67, and 68

The Phase I ESA includes four areas ("Site 1 through 4") located on the south side of Ontario Airport. Sites 1 and 2 are outside of the South Airport Cargo Center proposed lease area. "Site 3" includes portions of Parcels 61 and 62 and "Site 4" includes portions of Parcels 67 and 68.

Site 3 (Parcels 61 and 62)

Site 3 was covered with vineyards until the early 1940's when they were removed for aircraft tie downs and a taxiway. During the 1990 Site inspection, Site 3 was used as a high-speed driver training area for the San Bernardino County Sheriff's Department. No structures were present, but evidence of previous structures is identified in aerial photographs. Some dark areas on pavement were observed.

Site 3 is bordered to the south by a Beechcraft West fuel farm that included seven USTs with a total capacity of 88,500-gallons. These USTs were reportedly installed in 1983. To the west is the General Electric Test Cell Facility (General Electric) which is noted to use "significant amounts of several hazardous materials."

In the 1990 report, it is indicated that potential sources of impact to Site 3 may include the Beechcraft West fuel farm, a former electric box, discolored asphalt areas in the north-central part of the Site, and the border of General Electric, where drums of hazardous materials were stored.

Site 4 (Parcels 67 and 68)

Site 4 was primarily covered with vineyards until the mid-1940's, when a dirt access road was added, and a skeet range was developed. Much of the vineyards remained until the late 1950's. During the 1990 Site inspection, Site 4 was utilized for storage that included "some light water mix (3-6%), which is used as a fire-fighting agent." Police vehicle and training equipment are stored in the Hangar located at the Site and a 2-stage clarifier was present on the eastern side of the Hangar which included a dark fluid. A former electrical box is located along the eastern edge of the Site and a pad for a former above-ground storage tank (AST) is identified along the eastern border. No documentation of the AST contents was available for review.

Site 4 is bordered to the south by a fuel farm operated by Lockheed. It is noted that fuel spills have occurred at this location and were under investigation at the time of the 1990 report. An inactive UST is located south of the CANG Site near Jurupa Road. Cucamonga Creek is present as the eastern border of the Site and is a concrete lined channel.

The report notes that potential sources of impact to Site 4 may include soil contamination near the former AST, a Test Cell, a former electrical box, and the 2-stage clarifier. In addition, it was noted that some imported soil was stored in the northeast corner of Site 4.

Recommended Phase II Investigation

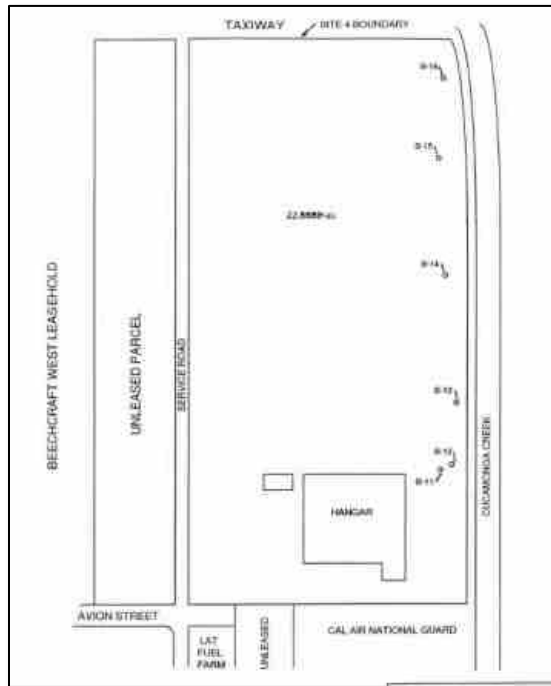

The following investigation was recommended for Sites 3 and 4 based on the results of the Phase I investigation.

- Site 3) Sampling of soils around the transformer pad for possible polychlorinated biphenyls (PCBs). This pad is located along the eastern edge of the property.
- Site 3) Soil/Gas survey on different colored areas, north end of Site.
- Site 3) Soil/Gas survey along General Electric border near storage area.
- Site 3) Soil/Gas survey near Beechcraft West fuel farm.
- Site 4) Sampling, characterization, and proper disposal of clarifier fluid.
- Site 4) Soil/Gas survey near clarifier.
- Site 4) Sampling at electrical station on eastern border for possible PCBs.
- Site 4) Soil/Gas survey near former Engine Test Cell location.
- Site 4) Soil/Gas survey at former AST location along eastern edge of property.
- Site 4) Soil boring at northeast corner at the former disposal site.

Site 3 (Parcel 61 & 62) Sample Locations

Site 4 (Parcel 67 & 68) Sample Locations

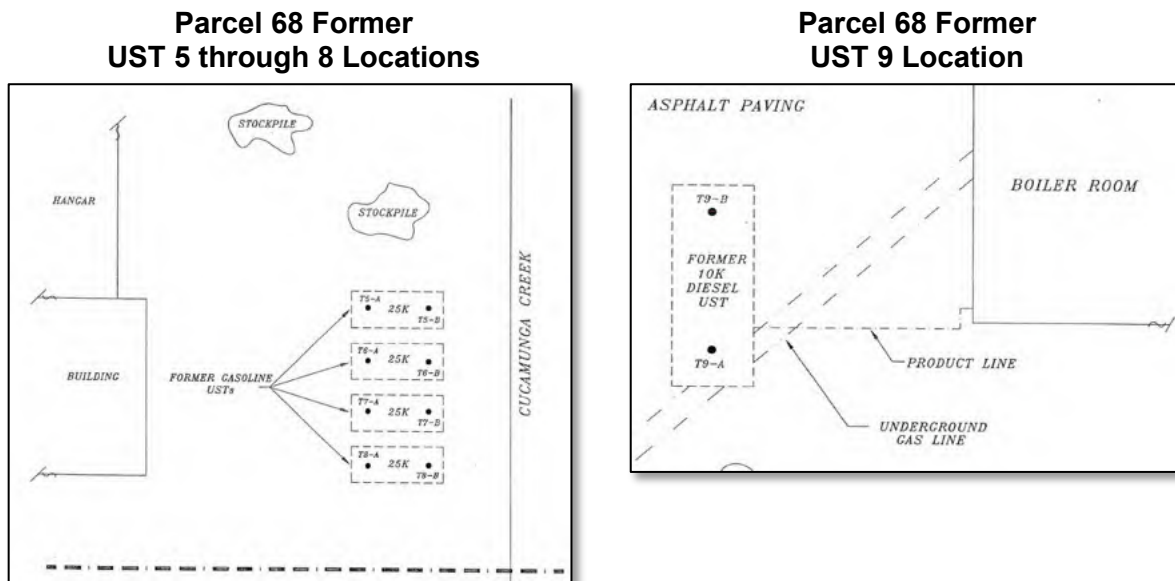

Results of sampling and analysis did not show significant subsurface impact from on-Site sources and no further action was recommended other than the removal of clarifier fluid from the 2-stage clarifier in Site 4.

5.2 1995 Underground Storage Tank Closure Report

El Capitan Environmental Services, 1995, Portions of Parcel 68

This report summarizes the removal of five USTs (UST 5, 6, 7, 8, and 9) with associated piping, appurtenances, and incidentals from the CANG Site located at the Ontario Airport. The excavation and disposal of hydrocarbon-impacted soil, confirmation soil sampling, and backfill of the pits/excavation are summarized in the 1995 report.

Note: Although the CANG location is documented to lie to the south of Parcel 68, Site location map 2 appears to identify the former UST location as adjacent to the Hangar that is located on Parcel 68 (see below).

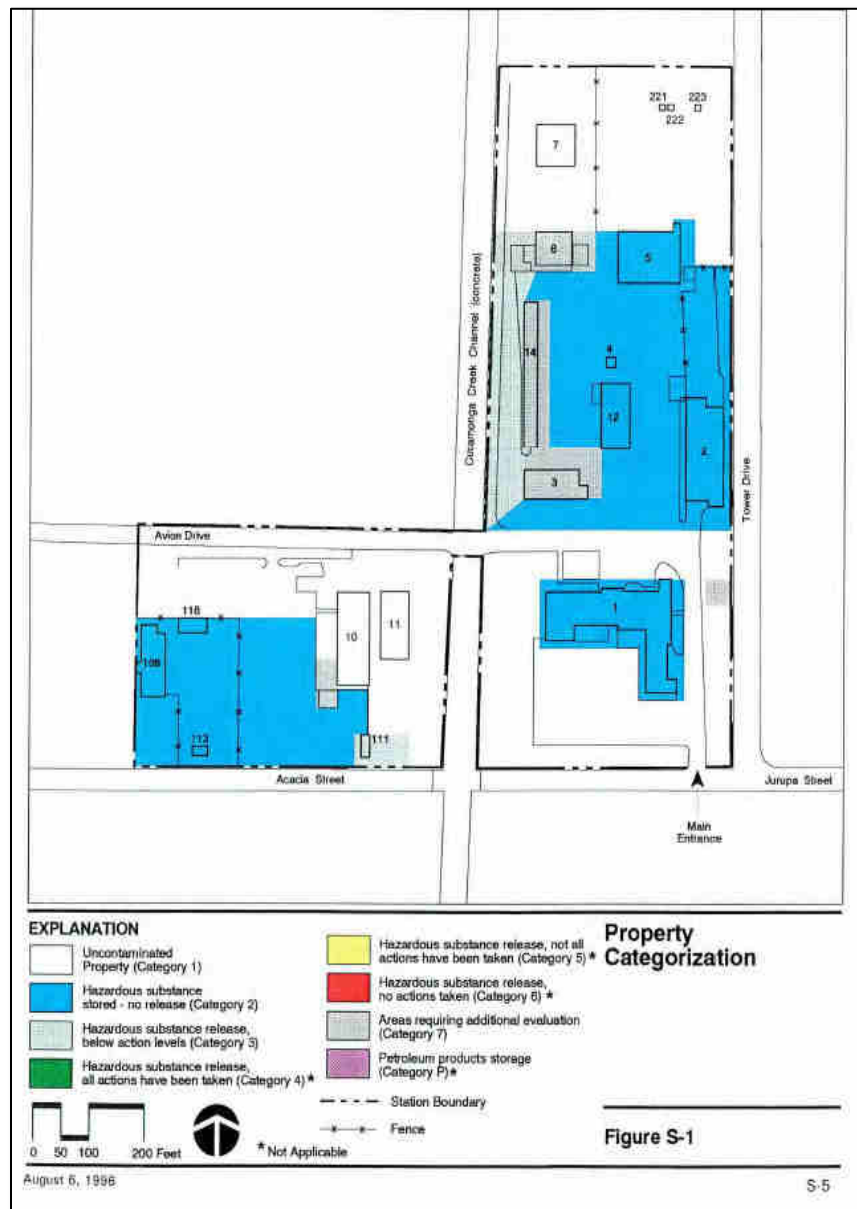

The former UST 9 location was found to be not impacted with total petroleum hydrocarbons (TPH) or benzene, toluene, ethyl benzene, and xylenes (BTEX). However, the subsurface soil at the former UST 5 through 8 location was found to be impacted with petroleum hydrocarbons. The contaminated soil was removed by two stages of excavations and post-excavation confirmation samples showed that the contaminated soil has been effectively removed except for minor or insignificant residual concentrations. The UST pits were backfilled with clean soil and no further action at the former UST locations was recommended.

5.3 1996 Draft Environmental Baseline Survey Ontario Air National Guard

Department of the Air Force, 1996, Off-Site Areas to the East and South of Parcel 68

This report was prepared to document, summarize, and describe the environmental condition of the areas to the east and south of Parcel 68 that were utilized by the ANGS. The report categorized portions of the property based on their environmental history and level of potential impact from Site use. Some areas that were identified with release below action levels were identified and some areas were identified that required additional investigation. These areas were primarily located to the east of Cucamonga Creek.

1996 ANGS Property Designations

5.4 1997 Hazardous Materials Survey Report

Encorp, 1997, Portions of Parcel 68

This report concluded that the Hangar located on Parcel 68 and utilized for the ANGS contained asbestos on the boiler and its tanks and piping. Lead-based paint was also identified on doors and metal surfaces, mercury was identified in fluorescent lighting tubes, and PCBs were identified in lighting ballasts. The following actions were recommended prior to any use, occupancy, or storage:

1. Remove significantly damaged boiler insulation.
2. Repair damaged pipe insulation.
3. Remove significantly damaged asbestos-containing floor tiles and mastic.
4. Abate any biological hazard due to pigeon droppings.
5. Prepare and implement an Asbestos Operations and Maintenance Plan.

Additional recommendations noted:

1. Asbestos should be abated prior to any renovation/demolition activities.
2. Loose/flaking lead-based paint should be encased.
3. Fluorescent tubes and mercury vapor lamps require hazardous disposal or removal.
4. PCBs in fluorescent light fixtures need to be disposed of as hazardous when removed.

1997 ANGS Hangar

5.5 1998 ESA

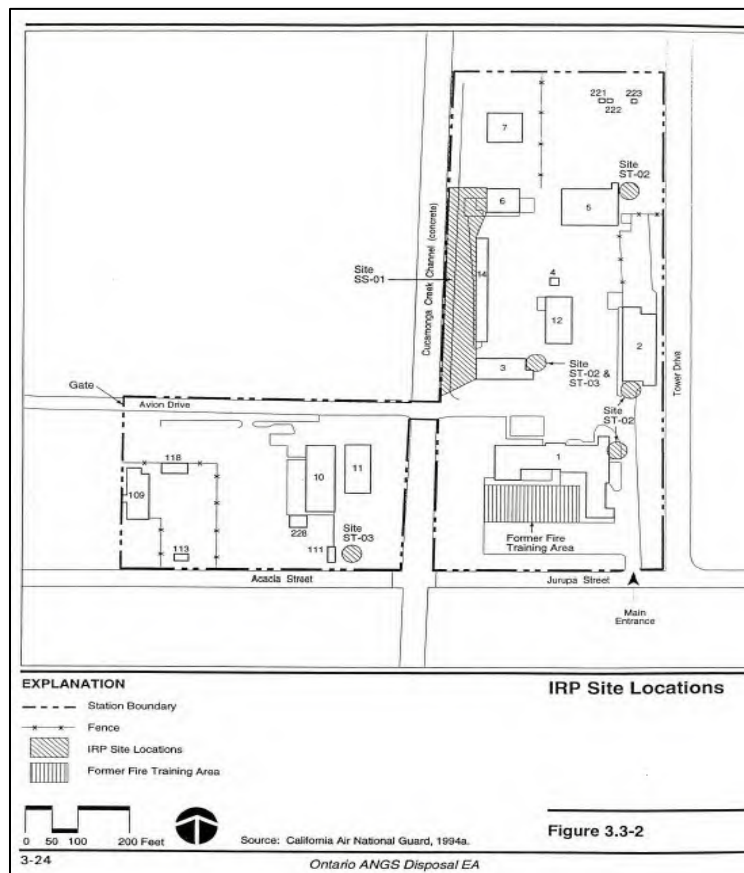

Department of the Air Force, 1998, Off-Site Areas to the East and South of Parcel 68

Based on the planned September 1998 closure of the Ontario ANGS, this assessment considers environmental impacts of the Air Force's disposal of the installation and portrays selected potential land uses. Three alternative scenarios, including the community's proposed plan, were used to group land uses and to examine the environmental effects of likely reuse.

Installation Restoration Program (IRP) sites were identified and included SS-01 where small amounts of hazardous substances including waste oil, fuels, solvents, and paints were disposed between the 1950s and the 1980s. The report notes that a soil gas survey was conducted in this area in 1992 and only trace concentrations of potential contaminants of concern were identified in soil vapor. However, as precaution groundwater samples were collected from three groundwater monitoring wells located on the property. Due to low concentrations in groundwater "No Further Action" was recommended for the Site. USTs and an oil/water separator were additionally identified at the Site.

Proposed action alternatives for Site closure are summarized in the report.

1998 ANGS Installation Restoration Program Site Locations

5.6 2001 Airport Group International

AGI, Phase I ESA Transmittal (Various)

The Phase I ESA that is associated with this transmittal document was not available for review. However, the findings of a Phase I ESA completed on the AGI facility in 2001 are identified in the document with the following findings:

- USTs have been present and were removed from the facility. Remediation of a fuel release took place from 1994 to 1997. No documentation of case closure was provided during the Phase 1 investigation.
- A fill port was found adjacent to the on-Site office building. AGI officials had no information about the exposed piping. This could be connected to a UST or other substructure.
- A floor drain is located inside the storage building. This drain was used to collect storm water overflow. According to an AGI Site official, this drain does not feed into the sewer or storm drain systems.
- GE Engine services is located nearby AGI at 1923 East Avion Street.
- Some lead-based paint was found at the facility.

No figures were attached to the communication to identify the locations of the USTs identified in the Phase I ESA.

5.7 2001 Phase I ESA Former Air National Guard and Surrounding

CTL, 2001, Portion of Parcels 61, 62, 63, 67, and 68

The maps included with this report identify several different Site configurations and in addition to Parcels 67 and 68, the 2001 Phase I may also address Parcels 61, 62, and 63. The following is the summary of the investigation results and conclusions supplied in the 2001 report.

1. The military, Army Air Corps and the Air National Guard, utilized the Site from the early 1940s through the mid-1980s. According to a U.S. Army Corps of Engineers (USACE) representative, an "Inventory Project Report" has been prepared for the Site; however, it has not been signed by headquarters and is therefore unavailable for review. The 2001 Phase I reportedly would provide the most current accounting of activities at the Site.
2. Six USTs have been associated with the Site: four USTs at the former fueling pad and two from the boiler units. Soil analysis results from 1994 identified only five USTs. **The second UST near the boiler has not been accounted for.** Elevated concentrations of TPH and BTEX were detected at the fueling pad.
3. The military utilized the Site for aircraft repair/overhaul as well as aircraft washdown. A USACE report from March 1991, indicated the use of fuel, paint strippers, solvents, etc.
4. Prior to the 1970s, chemicals and washdown waters were discharged into dirt ditches that emptied into the unlined Cucamonga Creek. An oil/water separator was installed after 1970 when the Creek reportedly was channelized. Based on aerial photographs, the creek was lined between 1976 and 1980. Many of the drains at the Site are connected to this separator which empties to the creek. A second washdown area is located at the west part of the Site. It is unknown if the drain discharges into the separator, discharges to the storm drain system, or drains directly into the Creek.

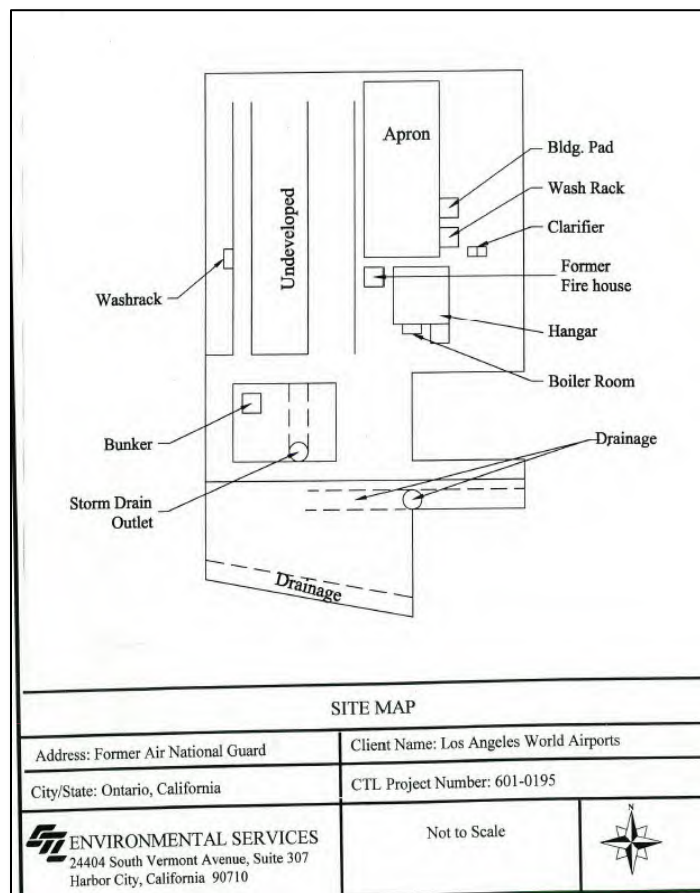

5. A septic system and leach field is located south from the Hangar. This system was used until the 1970s when a sanitary sewer system reportedly was installed.
6. A concrete pit is located inside the south part of the Hangar. The use is unknown but may have been used as a neutralization pit.
7. A munitions bunker has been located at the center part of the Site since the 1950s. Three other bunker-type buildings also were present in this area from the 1950s to early 1970s.
8. Two unidentified buildings were located at the south part of the Site from at least 1965 to the early 1970s. These buildings also may have been associated with repair/overhaul, as a military plane was noted next to the buildings in a 1965 aerial photograph.
9. An airport storm drain outlet is located in the fenced vehicle storage area at the center part of the Site. A yellowish-green discharge, later identified as containing surfactants, and a heavy build-up of algae was noted at the outlet. Based on inspection of the outlet, it discharges into the Cucamonga Creek.
10. Two open dirt channels/ditches traverse the Site. One runs along the south boundary of the Site and reportedly receives surface runoff water from the south part of the airport. The other runs east/west along the south part of the Site, north from the GE Test Center facility. Available maps show these channels/ditches discharge to the Cucamonga Creek.
11. Encorp's asbestos survey at the Hangar identified asbestos in various floor tile/mastic, boiler insulation, thermal insulation, coating on the interior/exterior of corrugated walls, roofing material, and drywall mud. Most of these materials were in poor to fair condition. Only the boiler and thermal insulation was identified as friable. Los Angeles World Airports (LAWA) has locked many of the Hangar rooms and has placed an asbestos notification on the boiler room. Encorp recommended abatement and/or isolation of asbestos-containing materials.
12. Encorp's lead survey at the Hangar identified lead throughout the building with some identified damaged materials. Encorp recommended "that at a minimum interim action measures" be taken for the damaged lead-based paint. CTL found a sample number discrepancy in this section of their report.
13. Encorp's PCB and mercury survey identified PCB-containing light fixtures and suspect mercury-containing fluorescent lights at the Hangar. Encorp recommend proper disposal of PCB and mercury-containing fixtures upon renovation or demolition activities.
14. The General Electric, adjacent to the Site, has documented solvent-contaminated soil and groundwater. Three out of four soil areas have been successfully remediated. The Regional Water Quality Control Board (RWQCB) has identified General Electric as the Potentially Responsible Party (PRP) for the solvent plume that extends approximately 8,000 feet southwest from the facility.

The following recommendations were documented:

- Request status updates from the USACE regarding the release of the "Inventory Project Report." In addition to the areas of concern identified in CTL's conclusions, this report should provide a comprehensive accounting of activities at the Site. EMD will request this report.

- EMD has reviewed the sample number discrepancy identified in Encorp's lead-based paint survey. Although there is a discrepancy in the starting number for the samples, the results as indicated in the body of the report appear correct.
- Lead-based paint and Asbestos abatement is required for building rehabilitation or demolition. The chance exists that additional suspect asbestos containing materials (ACMs) or lead-containing materials may be exposed during demolition and/or renovation activities. Such materials should be sampled and analyzed prior to any renovation and/or demolition activities which disturbs ACMs or lead-containing materials. If airborne lead levels are above Occupational Safety and Health Administration (OSHA) requirements, additional monitoring and respiratory protection may be required as well as engineering controls, such as containments and personal protective clothing.
- Records of proper abandonment of the USTs onsite were not located.
- The airport Industrial Storm Water Pollution Prevention Plan prohibits non-storm water discharges to the storm drain. EMD is investigating potential sources of the discharge.
- The wash racks, a wastewater clarifier associated with the east wash rack, and a sump located inside the Hangar should be properly abandoned. Otherwise, no additional environmental investigation is recommended at this time.

2001 Phase I Site Map (not to scale)

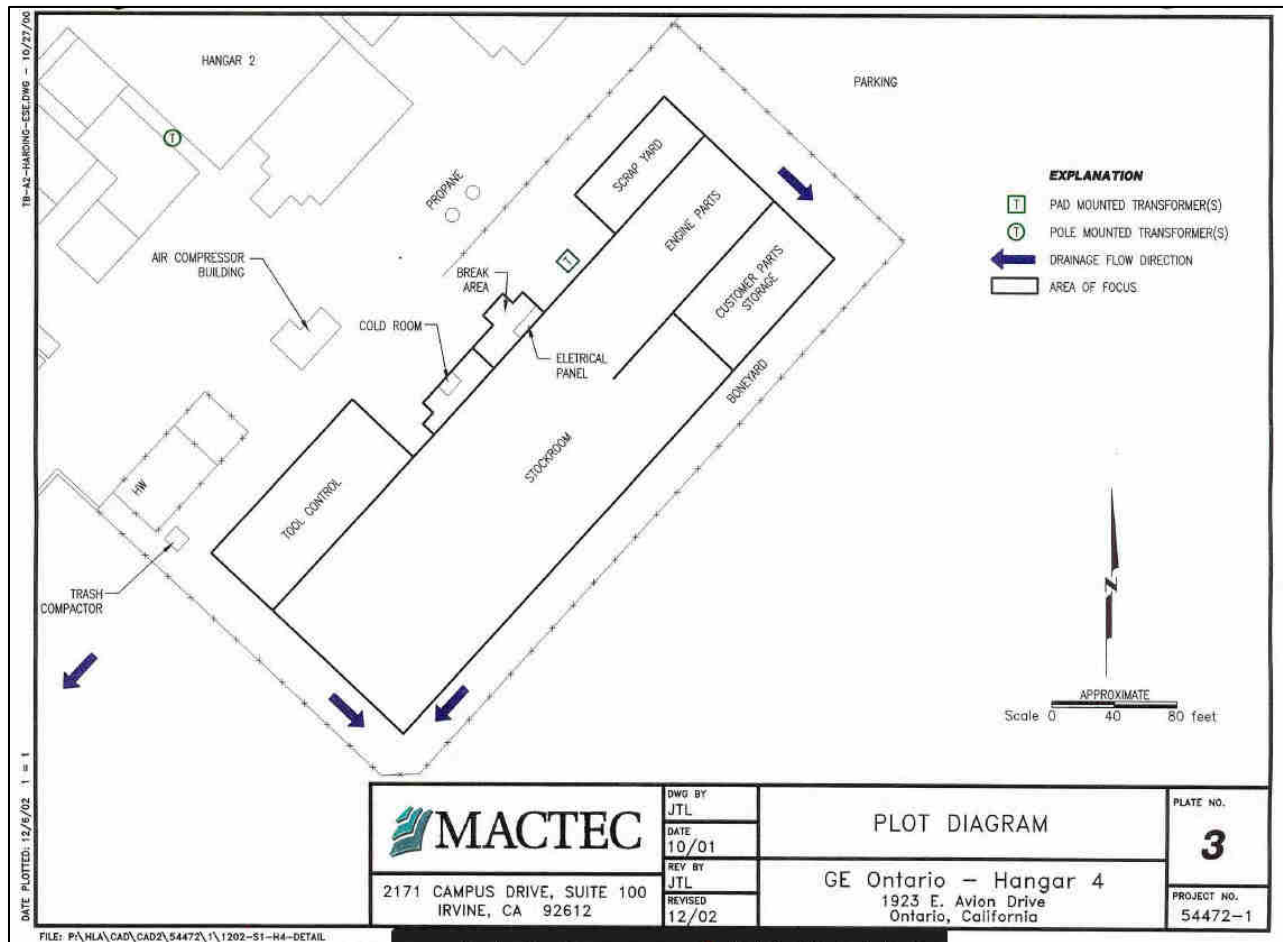

5.8 2003 Phase I ESA Hangar 4 at GE Engine Services

Mactec, 2003, Portion of Parcel 61

Four primary Hangars are identified on Parcel 61 (1, 2, 3, and 4). Only Hangar 4 was addressed in this document. The Phase I ESA identified the following recognized environmental conditions (REC):

In 1956 Northrop connected Hangar 4 to a cesspool. Hangar 4 remained connected to the cesspool until it was connected to the Site's sanitary sewer system in 1990. Mr. David Lu, an Environmental Manager formerly employed with General Electric, stated that a septic tank/leach field existed for Hangar 4. Mr. Lu could not recall the location of this septic tank/leach field. Closure or sampling data for the leach field and septic system could not be located at the time of the ESA.

2003 Hangar 4 Phase I Site Map (not to scale)

5.9 2003 Phase I ESA Former Los Angeles Police Department Emergency Vehicle Operations Course (LAPD EVOC) Facility

CTL, 2003, Portions of Parcels 61 and 62

The former LAPD EVOC was previously located in an area that covers portions of Parcels 61 and 62.

**Historical Location of Former LAPD EVOC (Google Earth, December 2003)
Blue dashed line is current Site, brown shaded area is the LAPD EVOC Area**

This document identified the following RECs:

- 1) Surface oil staining due to aircraft and automobile parking throughout the subject Site since the 1960s.
- 2) Maintenance activities and chemical storage were documented by the LAPD during the 1990s.

- 3) Adjacent General Electric facility has had a solvent release into groundwater (approximately 250 feet deep) resulting in a solvent plume that extends approximately 8,000 feet downgradient (i.e., southwest direction) of the release point.
- 4) Concrete-filled cylinders with embedded pipes are located in the northwest corner of the subject Site. The prior use of these cylinders is not known.

Recommendations were to collect and analyze the contents of the concrete cylinders to determine if they are considered hazardous waste. After characterizing the concrete cylinders, the cylinders should be disposed of, under legal manifests, at a proper disposal facility.

5.10 2004 Phase I ESA East Avion Complex

EarthTech, 2004, Small Portion on the Northwestern Corner of Parcel 61

This report primarily addresses the property to the west of the Site, but also includes a small amount of property on the northwestern portion of the Site, as shown below.

Area Included in the 2004 Report

**Area of Parcel 61 included in the 2004 report (Google Earth, December 2003)
Blue dashed line is current Site, brown shaded area is the area included in the report.**

This document identified the following RECs for the overall property:

- 1) **Historical Property Use:** The subject property was developed in the 1940s as a part of the Ontario Airport. The exact nature of operations on the subject property are not known but are assumed to include aircraft repair and maintenance activities. Spillage of petroleum hydrocarbons and solvents used during these activities may have impacted the subsurface.
- 2) **USTs:** An 8,000-gallon UST was removed from the subject property in August 1999. Soil samples were collected from beneath each end of the UST. The soil samples were analyzed for TPH, BTEX and methyl tert-butyl ether (MTBE). No concentrations of these compounds were detected in the soil samples collected. The excavation was backfilled with clean native soil and import fill and compacted.
- 3) **Groundwater Contamination on Adjacent Property:** Known releases at the General Electric facility located adjacent to the east of the subject property are suspected to have impacted groundwater. It is possible that impacted groundwater from the adjacent property has migrated or could migrate beneath the subject property.
- 4) **Asbestos Containing Materials/Lead-Based Paint**

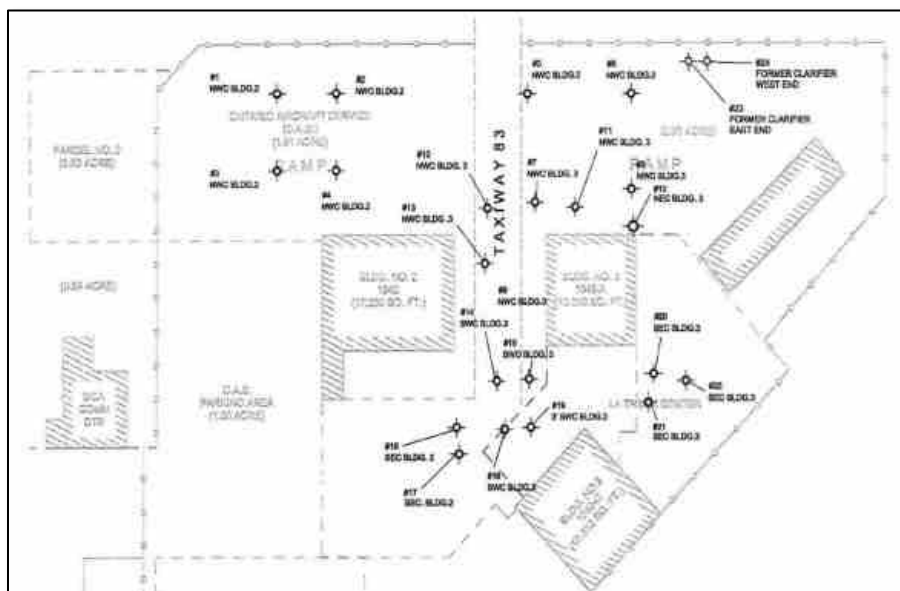

5.11 2005 Phase II ESA East Avion Complex

EarthTech, 2005, Small Portion on the Northwestern Corner of Parcel 61

Based on the results of the 2004 Phase I ESA, this limited Phase II investigation was conducted to evaluate the possibility of subsurface impacts resulting from the past maintenance activities conducted on the subject property between the 1940s and the present time.

EarthTech concluded groundwater was not encountered to the maximum depth investigated (5 feet). No significant volatile organic compounds (VOCs) were identified in the former aircraft maintenance areas. No further investigation or action is recommended at the subject property.

2004 Phase II Sample Locations Northeast Corner is a Part of the Current Site Area

5.12 2005 Phase I ESA

ASIG, 2006; Dirt Lease Area (off-Site)

This Phase I ESA was conducted on a property adjacent to the Site to the west. No RECs were identified but the report indicates that impact to groundwater may be present due to the known plume that existed at the General Electric facility to the southeast.

2005 Phase I Area

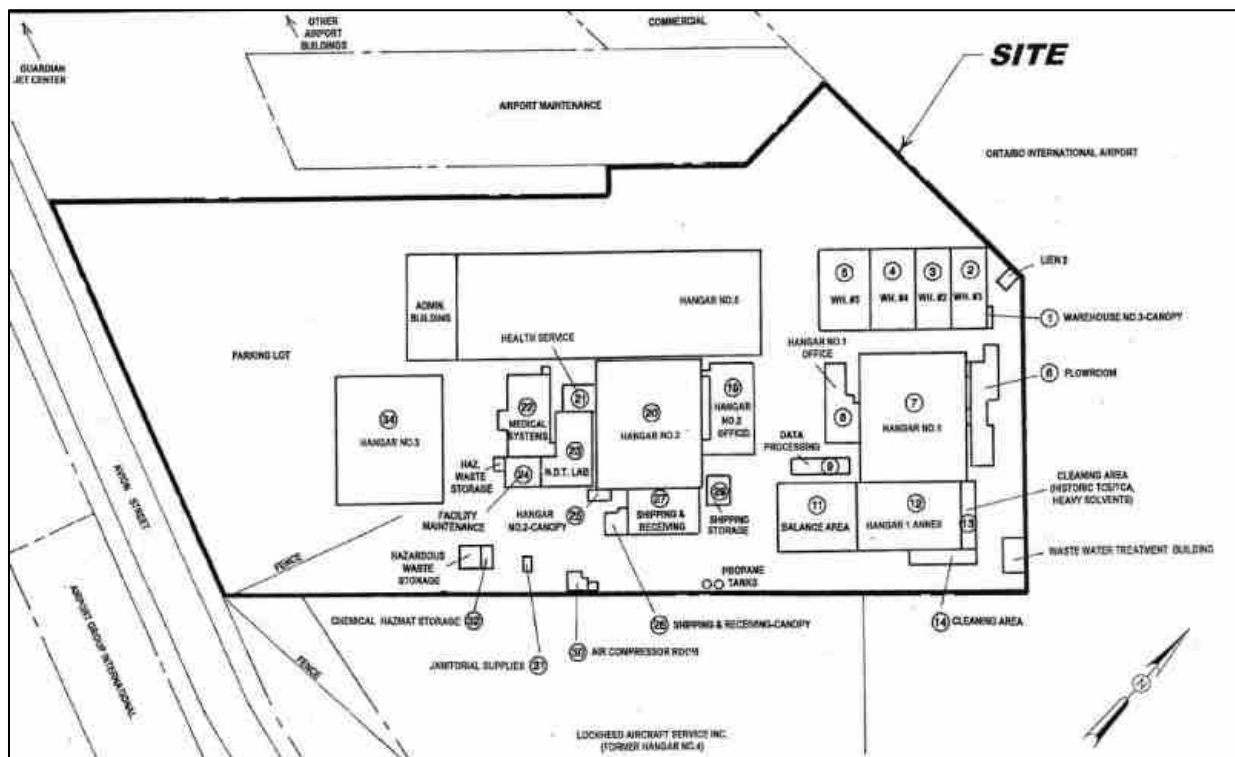

5.13 2006 Phase I ESA 1923 East Avion Street

MACTEC, 2006, Portion of Parcel 62

The portion of the Site included in this Phase I ESA is an office and overhaul plant for General Electric are assembled and disassembled here for maintenance and repair. Parts and supplies for these operations are stored, tested, and calibrated at the Site. Many chemicals are used in operations for purposes extending from lubrication of machine parts, cleaning, and treating wastewater. Chemicals used include: propane, potassium hydroxide (KOH), sulfuric acid (H₂SO₄), castrol oil, zyglo penetrant magna flux zyglo remover, cimperial, triton, heavy duty stripper, Cee Bee, calcium hydroxide, diamond crystal with softener care additives, oxygen, and various other oils, grease, solvents, and polymers, etc.

2006 Phase I Area – Entire Area is within Parcel 61

Phase I ESA Report Findings:

- History – General Electric moved to the Site in 1955 replacing Northrop and Douglas Aircraft. Hangar 5 and the Administrative Building are not visible in aerial photographs until 1989. Figure 2 of the report shows a layout of the Site that includes Hangars 1, 2, 3, and 5, and associated annexes and structures. The report also includes a topographic Site map prepared by Adkan Engineers dated December 2005.
- USTs - Environmental databases show that 14-17 USTs may have existed at the Site. A 2002 ESA prepared for General Electric by Harding ESE, Inc. indicate that 15 USTs existed at the Site, and that those USTs have been properly removed or abandoned in place with closure certification from the Department of Toxic Substances Control (DTSC) in 1994. At least one UST may have been abandoned in place under the cleaning line.

MACTEC indicated so far (Executive Summary, p. vi) that the closure letter for 15 USTs was not located.

- Electrical transformers - Pad and pole mounted transformers exist at the Site. Pad mounted transformers are all "dry" type. No leaks were observed in and around the pole-mounted transformers that contain oils. All transformers are owned by Southern California Edison (SCE) who maintains that none of its transformers currently contain PCBs
- Environmental database listings - The Site and many nearby properties are listed on several environmental databases that indicate historical association with environmental issues. The Report states that these listed properties are not anticipated to be RECs relative to the General Electric property.
- Regulatory agencies record review - MACTEC further reviewed relevant Site files at the RWQCB, and the DTSC, and found the following (from Section 8.0 of the Report):
 1. A Notice of Deficiency from DTSC to General Electric regarding the 1990 UST Closure Plan.
 2. Closure report for five USTs and associated piping/vadose zone wells by OHM Remediation, dated May 30, 1991. Four tanks were removed and the area backfilled, while one, buried under a building support beam, was rinsed and closed in place with the approval of the regulators.
 3. Approval letter from DTSC, dated August 6, 1992, for the T-58 Sump Closure Work Plan.
 4. Letter (dated 1991) from the RWQCB to former Site occupants stating that chlorinated solvents have been detected down-gradient from Ontario Airport.
 5. A Closure Certification Report, dated June 2, 1994, prepared by Canonic Environmental, documents the final recommendations and certification of removed UST's, closure of an Expanded Drum Storage Area (EDSA), closure of a 200-gallon waste storage tank, and an oil/water separator. On October 17, 1994, closure was granted and certified by the DTSC (which contradicts MACTEC's statement reported in 2 above).
- Potential soil contamination - Cracks in the flooring were observed in Hangars 2, 3, and 5 that could have allowed contaminants to seep through to the soil beneath those Hangars. Historically during the 1950's and 1960's under former Site occupants, Northrop and Douglas Aircraft, aircrafts were washed on-Site with runoff collected into unlined ditches and sumps. The findings below are listed in the order reported in the Report's Executive Summary.
 - Hangar 3 - Currently used for supplies storage and was a former machine shop where oils and solvents were used. The 2002 Harding ESA reported trichloroethylene/perchloroethylene (TCE/PCE) contamination based on soil-gas data collected southeast and southwest of the Hangar. Historically, aircrafts were washed west of Hangar 3.
 - Hangar 5 - Currently used for aircraft engine refurbishing. Soil staining was observed on the floor of Hangar 5, which formerly housed a bearing cleaning room and a paint

- booth. The Hangar now houses the Campbell grinder which uses many lubricants and solvents.
- Hangar 2 - Currently used for supplies storage and formerly housed Plasma spraying.
 - Hangar 1 - A parts-cleaning area that uses many chemicals and solvents stored in tanks, some of which may have discharged into the southeast side pavement in the past.
 - T-58 test cell sump - The sump collects wastewater transported by truck from the General Electric facility. A closure plan was approved by DTSC in 1992 that included drilling to collect and analyze soil borings. No further documentation is available. However, in the report it is indicated that a sump located 25 feet east of Tool Control at the northern end of Hangar 1 with its line running below the tool room (based on a 1990 Plumbing Diagram by Gabel) which was not part of the ESA study area. It is unclear if this is the T-58 test cell sump.
 - Industrial waste discharge - In the 1950's, the former Site occupants (Northrop and Douglas Aircraft), were cited by the RWQCB for probable sources of contaminants in the groundwater, as a result of the routine discharge of industrial waste and wastewater into the ground (unlined ditches and sumps).
- Asbestos - An Asbestos Assessment completed March 9, 2004 by Integrity Environmental Consultants Inc. showed that asbestos tiles exist in the Data Processing Building.
 - Septic Tank/Leach Fields closure – It is indicated in the report that the closure of septic tanks or leach field could not be located. Connection, to the City of Ontario sewer system may not have taken place until 1985.
 - Wastewater treatment plant (WTP) and associated tanks – It is indicated in the report that the WTP is permitted through the 'permit by rule' (PBR) system. The industrial wastewater permit is issued by the Inland Empire Utilities Agency and County Sanitation Districts of Los Angeles County.

5.14 2008 Phase I ESA of the Ontario International Airport Mercury Air Center Facility CTL, 2008, Portions of Parcel 62

This area is referred to as “MAC-ONT” within this report. At the time of the report, the Site was developed with the MAC-ONT facilities. Activities at the Site were related to aviation support services including aircraft refueling, ground services, aircraft maintenance, and aircraft Hangar and tie-down space. Multiple fuel trucks parked on-Site support refueling activities. Fuel support was provided by the on-Site fuel farm in the southwest corner of the property. Aircraft maintenance operations were performed both in the Hangar spaces and in the field. Ground vehicles were also serviced on-Site at the outbuilding maintenance shop.

The Phase I ESA Report findings identify the following issues at the Site:

- Two clarifiers are associated with effluent from the Hangar buildings. No subsurface investigations of potential impacts have been performed since 1998.
- Six USTs and one clarifier are located at the on-Site fuel farm. No subsurface investigations of potential impacts have been performed since 1998. A 50-gallon spill of fuel/water mix was reported by the California Hazardous Material Incident Reporting System (CHMIRS) in 2001 at this location.

- Hazardous materials and chemicals are used and stored at the Site. These include, but not limited to, aviation fuels, unleaded fuel, waste fuels and oils, lubricating oils and greases, solvents, and lead-acid batteries.
- Staining of both soil and concrete was observed at the outbuilding maintenance shop, which is within the boundary of the property to be vacated by MAC-ONT.

2006 Phase I Area – Entire Area is within Parcel 61

Owner/User-supplied documents are included in Appendix G and have been incorporated in the Summary of Findings (Section 7.0).

5.15 Interviews/Questionnaires

A “User Questionnaire” was provided to supplement information provided by Mr. Winters to GSI during the site reconnaissance and other correspondence. An “Owner/Occupant Questionnaire” was also provided to Mr. Winters to forward to owner/occupant representatives. The questionnaires are included in Appendix H.

In compliance with ASTM E1527-13, a conference-call interview was conducted by Microsoft Teams on 12 October 2021 with Ms. Elisa Grey, Director of Commercial Real Estate for Ontario International Airport, and Ms. Nicole Walker, also with the Ontario International Airport. Ms. Bita Tabatabai, Ms. Samantha Curtis, and Ms. Erika Anderson with GSI were also on the conference call. The results of the conference call are included in Table 1.

6.0 RECORDS REVIEW

Environmental records were obtained by requesting records from state and local regulatory agencies and conducting a search of federal and state databases.

6.1 Regulatory Agency Records Review

Regulatory agency records were requested on 1 September 2021. Agency requests included a request for reasonably ascertainable records for the Site addresses and APNs, as well as information related to nearby sites of potential concern. All agency file review requests and documents subsequently supplied by the agencies are included in Appendix I. Significant available agency records identified in the table below.

AGENCY	ANTICIPATED RECORD TYPES	RECORDS AVAILABLE?		
		YES	NO	PEND
City and Local Agencies				
City of Ontario Building Department	Historical tenants, property use, permits.	X		
City of Ontario Fire Department	Hazardous materials storage, accidents, spills, leaks.		X	
South Coast AQMD	Air emissions and permits.	X		
City of Ontario Public Works	Industrial waste discharge permits or violations.		X	
County Agencies				
San Bernardino County Fire Department-Hazardous Materials Division	Utilization, manufacture, storage and/or discharge of hazardous materials/waste, and any information concerning previous or on-going site investigations/remediations pertaining to hazardous materials/waste	X		
State and Regional Agencies				
DTSC-Cypress	Agency oversight information and documents.	X		
DTSC-Chatsworth	Agency oversight information and documents.		X	
Office of the State Fire Marshall	Oil and gas pipeline information.	X		
RWQCB-Santa Ana	Agency oversight information and documents.	X		
Agency Websites				
County Assessor's Office	Development dates, APNs, parcel details.	X		
SWQCB Geotracker	Agency oversight information and documents.	X		
DTSC Envirostor	Agency oversight information and documents.	X		
National Pipeline Mapping System (NPMS)	Hazardous liquid and gas transmission pipelines.	X		
California Geologic Energy Management Division (CalGEM)	Oil and gas development, active oil wells, plugged wells, methane.	X		
SWRCB Deed Restrictions	Deed Restrictions		X	
DTSC Land Use Restrictions	Land Use Restrictions		X	

Pend = Records are pending. As of the date that this Phase I ESA was published, records had not been supplied by the indicated agency.

Information that GSI obtained from regulatory agency records is summarized below.

6.1.1 City of Ontario Building Department

Documents supplied from the City of Ontario Building Department included historic building permits/permit applications, plumbing applications, electrical applications, HVAC applications, and similar. Significant records are summarized below.

- Application for permit for propane fueling station at 1923 East Avion Street for General Electric Aviation in 1987.
- 1990 permit application for fuel system at 2132 East Avion Street for City of LA Department of Airports.
- 1997 application for the modification to existing oil/water separator system for GE Engine Services at 1923 East Avion Street.
- 1991 permit application for electric for fuel tanks at the Department of Airports at 2132 East Avion.
- Permit application to install three USTs and Airport Fire Station at 1230 Tower Drive, Ontario, CA was recorded in 1988.
- Application for permit for above ground tank at 1049 South Vineyard Ave in 1999.
- 1987 permit application for electrical for gasoline fuel system at 1801 east Avion Street.
- Plan check/permit application for a fueling facility at 2161 E. Avion Dr. Ontario, CA Mercury Air Center was recorded in 1998.
- Plan check/application to install a prefabricated spray paint booth was recorded in 1998 at 2132 Avion Street for Ontario International Airport/Maintenance. This was possibly within the CANG Hangar.
- Permit from 2013 to remove USTs including electrical cabling removal and compaction per plan at 2161 East Avion Street, Building #2 for City of Los Angeles Department of Airports
- Permit from 2015 to construct jet plane blast wall at 2161 East Avion Street for Cinco Air Charter LLC.

Off-Site Property Records

- Permit application to upgrade the USTs at 1801 East Avion in 1999 for FedEx.
- 2005 permit to install 10,000-gallon AST (dual compartment) fueling system (4,000-gallon diesel and 6,000-gallon gasoline) at 1230 South Tower Drive for City of Los Angeles Department of Airports. Permit from 2013 to replace existing 250-gallon UST with new 250-gallon UL 2085 UST and demo existing canopy at 1923 East Avion St, Building #2 for City of Los Angeles #1 World Way.

6.1.2 South Coast Air Quality Management District (AQMD)

Significant records obtained from the AQMD are summarized below.

- GE Engine Services Facility Equipment Report that lists permits for abrasive blasting, spray booths, amine (or DEA) regeneration, service stations for dispensing and storing

gasoline, storage tank 1,1,1 Trichloroethane, miscellaneous inorganic stripping, tank chemical milling, and canceled permits for gasoline UST, fuel oil UST, jet engine test cell facility, degreaser 1,1,1 Trichloroethane, and tank surface preparation-other acids at 1923 East Avion Drive.

- Beechcraft West Facility Equipment Report that lists a permit to operate a bulk load truck (1 rack) Ethylene Dichloride (1983 and 1989), amine treating (1989), service station for storing and dispensing gasoline (1989), and cancelled permit applications for storage tank miscellaneous materials (1989) at 2161 East Avion Street.
- Mercury Air Center Facility Equipment Report that lists permits for storage tank miscellaneous materials, bulk load truck (1 rack) ethylene dichloride, a service station for storing and dispensing gasoline, a mobile refueling station for storage/dispensing gasoline, and two cancelled permits for service station for storage and dispensing gasoline and a mobile refueling station for storing and dispensing gasoline at 2161 East Avion Street.
- Atlantic Aviation Services Facility Equipment Report that lists a permit to operate a mobile refueling station for storage/dispensing gasoline (2010) and a bulk loading/unloading fuel dispensing (2010) at 2161 East Avion Street.
- Atlantic Aviation Services 2010 Facility Equipment Report documents inactive P/Os for an Avgas and Jet A storage and dispensing system, gasoline dispensing and storage station, mobile refueling station for storage/dispensing gasoline, and de-icing dispensing system at 2161 Avion Street.
- 1988 violation at General Electric Co. Aviation for failure to obtain permit to construct Trichloroethane storage tank.
- 2001 violation for Mercury Air Center at 2161 East Avion Street for failure to provide reverification tests in mobile fuelers and USTs.
- 2012 violation for Atlantic Aviation Services at 2161 Avion Street for failure to update mobile refueler records to prove compliance with permit conditions, and for failure to update tank farm permit with 2nd Jet A fuel tank.
- 1989 permit application to modify Beechcraft West Avgas and Auto Fuel Farm pad at 2161 East Avion Street.
- 1989 permit application for the alteration of three storage tanks at Beechcraft West-2161 East Avion Street. Tank #1 is a 25,000-gallon Jet-A storage tank, tank #2 is a 25,000-gallon Jet-A storage tank, and tank #3 is a 15,000-gallon Jet A storage tank.
- 1989 permit application for existing 6,000-gallon underground gas tank at Beechcraft West-2161 East Avion Street.
- 1996 permit application for change of permittee for the service station for storage and dispensing at Mercury Air-2161 East Avion Street.
- 1999 Mercury Air Center application for permit to construct mobile refueler at 2161 East Avion Street.
- 1999 permit application for existing mobile refueler at Mercury Air Center-2161 East Avion Street.

- 2010 permit application for fuel farm at Mercury Air Center-2161 East Avion Street. Fuel farm consists of two 25,000-gallon Jet A USTs, one 15,000-gallon Jet A UST, one 15,000-gallon Avgas UST, one 6,000-gallon unleaded UST, and one 2,000-gallon waste UST.
- Application for permit to alter Aircraft Engine Turbine Test Cell operated by General Electric company at 1923 East Avion Street in 1986.
- 1989 application for permit to operate Instapak Foam-In-Place Packaging system at General Electric Company-1923 East Avion Street.
- Permit application for surface preparation tanks at General Electric Company-1923 East Avion Place in 1989.
- 1979 permit application for a 40,000 CFM Fume Collection and Exhaust Scrubber system operated by General Electric Company at Ontario International Airport.
- 1990 permit application for an UST for T58 test cell operated by General Electric Company at 1923 East Avion Street.
- 1990 permit application for an UST for calibration fluid operated by General Electric Company at 1923 East Avion Street.
- 1989 permit application for cold solvent degreaser operated by General Electric at 1923 East Avion Street.
- 1989 permit application for one 6,000-gallon gasoline UST and two 6,000-gallon diesel USTs operated by General Electric at 1923 East Avion Street.
- GE Engine Services Facility Equipment Report that lists permits for soil treatment and vapor extraction, activated carbon adsorber vents, jet engine test facilities, and title V permit at 2264 Avion Place.
- GE Engine Services Facility Equipment Report that lists permits for a turbine engine (>50 MW) other fuel, two gasoline storage tanks, and a petroleum middle distillate storage tank at 2264 Avion Place.
- 1992 permit to operate nitric acid surface preparation line consisting of: unheated nickel stripping tank, steam heated nickel stripping tank, associated rinse tanks operated by General Electric Company at 1923 East Avion Street.
- 1992 permit to operate strip tank, cold, nitric acid operated by General Electric Company at 1923 East Avion Street. 1979 application for permit to construct metal spray booth Ontario International Airport.
- 1979 application for permit to construct dry spray booth with oven enclosure.
- 1988 application for permit to construct a 2,500-gallon 1,1,1 Trichloroethane storage tank system operated by General Electric at 1923 East Avion Street.
- 1988 application for permit for a 17,000-gallon above ground epoxy-lined steel bulk storage tank containing JP-4 operated by General Electric Company at 2264 Avion Place.
- General Electric Permit to operate a foam packaging system, closed cell, sealed air corporation, instapak 715, with one 55-gallon drum containing polymeric isocyanate and one 55-gallon drum containing polyurethane resin at 1923 East Avion Street.

- 1979 permit to operate paint spray control system operated by General Electric Company at Ontario International Airport.
- 1979 permit to operate metallizing spray booth operated by General Electric Company at Ontario International Airport.
- 1979 permit to operate paint spray booth operated by General Electric Company at Ontario International Airport.
- 1993 permit to operate gasoline dispensing nozzle, equipped with phase II vapor recovery system, balance retractor and 6,000 gasoline UST equipped with Phase I vapor recovery system at Beechcraft West-2161 Avion Street.
- 1992 General Electric Company Permit to operate nitric acid surface preparation line consisting of an unheated nickel stripping tank, steam heated nickel stripping tank, and associated rinse tanks at 1923 East Avion Street.
- 1990 General Electric Company Permit to operate 2,000-gallon jet fuel UST at 1923 East Avion.
- 1997 Mercury Air Group Permit to operate a fuel storage and dispensing facility at 2161 East Avion Street. The facility consists of gasoline dispensing nozzles, equipped with phase II vapor recovery system, balance retractor and 6,000-gallon gasoline USTs with phase I vapor recovery system, not methanol compatible.
- General Electric Company 1989 Permit to operate Jet-A fuel oils storage tanks (No. 1, No. 2, No.3, and No.4), with fixed roof types and a 16,500-gallon capacity at 2264 East Avion Place.
- General Electric Company 2001 Permit to operate soil vapor extraction and treatment system, for area "A," "B", and "C" consisting of vapor extraction wells and ducts, water knockout pot, extraction blower, and three carbon adsorbers at 2264 East Avion Drive.
- 2010 Atlantic Aviation Services Permit to operate Jet A/Aviation gasoline/gasoline bulk loading/unloading facility at 2161 East Avion Street. The facility consists of two 25,000-gallon jet A USTs, one 15,000-gallon jet A UST, one 15,000-gallon aviation gasoline UST, one 6,000-gallon gasoline UST, one 2,000-gallon waste gasoline UST, three position tank truck jet A/aviation gasoline/gasoline loading system.
- 2010 Atlantic Aviation Services Permit to operate cargo tank motor vehicle fueling system (mobile fueler) at 2161 East Avion Street. The fueling system consists of a dual compartment gasoline/diesel dispensing mobile fueler (one 1,000-gallon gasoline compartment, equipped with phase I vapor recovery system and one 1,000-gallon diesel compartment, not equipped with phase I vapor recovery system), and one gasoline dispensing nozzle with 50'-0" coaxial hose on a retractable hose reel, equipped with phase II vapor recovery system.
- General Electric 1991 permit to operate air pollution control system at 1923 East Avion Avenue. The system consists of a metallizing spray booth, cyclone separator, dust collectors, and an exhaust system with a 75 H.P. Blower venting a metallizing spray gun.
- Mercury Air Center 2000 permit to operate a cargo tank motor vehicle fueling system (mobile fueler) at 2161 East Avion Street. The fueling system consist of a dual compartment gasoline/diesel dispensing mobile fueler equipped with one 700-gallon

compartment gasoline tank and one 500-gallon compartment diesel tank, and one gasoline dispensing nozzle.

- 1997 GE Engine Services permit to operate abrasive blasting system at 1923 East Avion.
- General Electric Company 1990 permit to operate a fuel storage and dispensing facility at 1923 East Avion Street. The facility consists of underground gasoline storage tanks (each 6,000-gallons), gasoline dispensing nozzles vented to vapor recovery system, underground diesel storage tanks (each 6,000-gallons), and diesel dispensing nozzles.
- Beechcraft West 1990 permit to operate a fuel storage and dispensing facility at 2161 East Avion Street. The facility consists of one 6,000-gallon underground gasoline storage tank, and one gasoline dispensing nozzle vented to vapor recovery system.
- Ontario Airport Maintenance 1998 permit to construct/operate a spray booth at 2132 East Avion Street.
- 1983 permit to operate petroleum distillate storage, loading and dispensing facility at Ontario International Airport-Beech Craft West. The facility consists of two 25,000-gallon underground jet-A storage tanks, two 15,000-gallon underground aviation gasoline storage tanks, one jet-A dispensing nozzle, one aviation gasoline dispensing nozzle, Jet-A dispensing pump, and two aviation gasoline dispensing pumps.
- General Electric Company Permit to operate 1,1,1 trichloroethane storage system consisting of two 500-gallon storage tanks at 1923 East Avion Street in 1988.
- Two General Electric Company 1988 permits to operate 16,500-gallon storage tank no. 4 with a fixed roof for JP-4 storage. Storage tank is located at 1923 East Avion Street.

Off-Site Property Records

- Off-Site: Facility Equipment List Report including a 1990 permit to operate a Service Station for Storage and Dispensing Gasoline, and a 1990 permit to operate amine treating at 1230 Tower Drive. Both were granted.
- Off-Site: Violation issued at 1230 Tower Dr. in November 1994 for failure to maintain vapor recovery system.
- Off-Site: Permit application for diesel-fueled emergency generator at Federal Aviation Administration in 1994.
- Off-Site: November 1994 notice to comply with the application of instruction stickers, including a toxic warning label, to gas pumping equipment at 1230 Tower Dr. Ontario, CA.
- Off-Site: April 1988 application for permit to construct and permit to operate gasoline storage and dispensing facility at Ontario International Airport Fire Station (1230 Tower Dr., Ontario, CA). One underground gasoline storage tank and one underground diesel storage tank noted.
- Off-Site: November 1990 permit application to construct/operate a fuel storage and dispensing facility at 1230 Tower Dr., Ontario, CA. The facility consisted of an underground gasoline storage tank, gasoline dispensing nozzles vented to vapor recovery system, balance retractor, underground diesel storage tank, and diesel dispensing nozzles.

- Off-Site: Application and permits to operate diesel-fueled internal combustion engine at 1250 Tower Drive from 1994 for Federal Aviation Administration.
- Off-Site: Federal Express 2005 permit to construct/operate a fuel storage and dispensing facility at 1801 Avion. The facility consists of a gasoline UST with 10,000-gallon capacity, and two gasoline nozzles dispensing two products.
- Off-Site: Permit to operate gasoline fueling and dispensing facility operated by Federal Express Corporation at 1801 Avion. The facility consists of one gasoline storage tank, three gas dispensing nozzles, and vapor recovery system.
- Off-Site: General Electric Permit to operate test cell no.2, jet engines at 2264 Avion Drive. 1993 Permit to operate aviation gas and jet-A fuel storage and aircraft fueling facility at Beechcraft West-2161 East Avion. The facility consists of one 15,000 aviation gasoline UST, two 20,000 and one 15,000-gallon jet-A fuel USTs, one aviation gasoline dispensing system, and one jet-A gasoline dispensing system. 1979 permit to operate vapor degreaser operated by General Electric Company at Ontario International Airport
- Off-Site: Violations issued March 1990 for failure to obtain permit to operate diesel tank and diesel generator at Cal Air National Guard at 2500 Jurupa Street.
- Off-Site: Application for permit to operate existing USTs at 2500 Jurupa Avenue in May 1990. The tanks consist of one 4,000-gallon gasoline tank and one 6,000-gallon diesel tank installed in 1958 and 1966.
- Off-Site: Application for permit to construct and operate spray paint and solvent booth at Air National Guard Station in 1986.
- Off-Site: Application for permit to construct and operate spray paint booth at California Air National Guard Station in 1978.
- Off-Site: 2002 application to replace existing diesel-fueled emergency standby engine generator with a Kohler 180ROZJ at 1250 Tower Drive.
- Off-Site: 2007 Permitted equipment list at GE Engine Services that lists Turbine Engine Test Cell #1, Turbine Engine Test Cell #2, and four soil vapor extraction and treatment system permit.
- Off-Site: 1978 permit to operate paint spray booth at Ontario Air National Guard.
- Off-Site: Permit to operate fuel storage and dispensing facility at 2500 Jurupa Street in 1990. The facility consists of a 4,000 underground gasoline storage tank, gasoline dispensing nozzles vented to vapor recovery system, balance retractor, a 6,000 underground diesel storage tank, and diesel dispensing nozzles.
- Off-Site: Permit to operate gasoline storage and dispensing facility with O2 nozzles at the Ontario Air National Guard Base in 1981.
- Off-Site: GE Engine Services, LLC Facility Equipment Report that lists permits for gasoline storage tanks, petroleum middle distillate storage tanks, JP-4 storage tank, fuel oil storage tank, Jet-A storage tank, soil treatment vapor extract gasoline, soil treatment vapor extract VOC, Title V permits at 2264 Avion Place.
- Off-Site: 1995 violation for Federal Express Corp at 1801 Avion to install rubber ring/casket in fill cap of U/L gasoline tank and to install additional decals in fueling station.

- Off-Site: 1988 violation for the City of LA Department of Airports at 2132 East Avion Street for gas dispensing equipment and diesel tank. 2003 asbestos complaint report at 2132 East Avion Street, Terminal One west end basement. Complaint alleged that workers were exposed to asbestos containing materials. Complaint stated that some of the workers were told to enter an area that was known to have asbestos containing materials and put down plastic covering on the floor.
- Off-Site: Permit application for Detroit Diesel electric generator at Federal Express Corporation in 1995.
- Off-Site: 1987 application for permit to construct/operate two USTs at 1801 Avion. One tank is 150,000-gallon/year unleaded gasoline and the other is 30,000-gallon/year diesel tank.
- Off-Site: Permit application for diesel fueled electric generator at Federal Express 1995.
- Off-Site: 2005 permit application for modification of 10,000-gallon gas UST with two new unleaded nozzles at Federal Express.
- Off-Site: 1998 permit application to construct paint spray booth at 2132 East Avion Street.
- Off-Site: Applications for permits for three Jet-A fuel oil storage tanks (No. 1, No. 2, No. 3) in 1989 operated by General Electric Company at 2264 East Avion Street. The tanks are fixed roof tanks with 16,500-gallon capacity.
- Off-Site: 1990 permit application for waste fuel/oil UST operated by General Electric Company at 2264 Avion Place.
- Off-Site: 2007 non-emergency internal combustion engine (ICE) application for Express Jet Airlines at Ontario International Airport-Avion Drive. ICE is diesel-fueled.
- Off-Site: 1990 Permit to construct/operate fuel storage and dispensing facility consisting of an underground gasoline storage tank, gasoline dispensing nozzles vented to vapor recovery system, underground diesel storage tank, and diesel dispensing nozzles at 1230 Tower Drive.
- Off-Site: Facility Equipment Report that lists a permit to operate a service station for storage and dispensing gasoline (1976), permit for amine treating (1990), permit for amine (or DEA) regeneration (1976), permit to operate spray paint and solvent booth (1990), abrasive blasting permit (1900), and a cancelled permit application for a spray paint/solvent booth (1986) at 2500 Jurupa Avenue.
- Off-Site: Permits to operate diesel-fueled internal combustion engines at 2500 Jurupa Avenue from 1990.
- Off-Site: Facility Equipment Report that lists a permit to operate a service station for storage and dispensing gasoline (1987 and 2005), permit to operate amine treating (1987), and two canceled permit applications for diesel-fueled internal combustion engines at 1801 Avion for Federal Express.

6.1.3 San Bernardino Fire-Hazardous Materials

The San Bernardino County Hazardous Materials Division responded on 22 September 2021 with a report of records at their office that consist of “30 files, 50 volumes, approximately 96” thick,

combined to a total of 8 feet.” Most records are included within ERIS and the online databases Envirostor and Geotracker. Significant records are summarized below.

- Advanced GeoEnvironmental, Inc. (AGE) prepared a report summarizing the removal of seven USTs and subsequent soil sampling and excavation activities in May 2013 at 2161 East Avion Street, the former Beechcraft West fuel farm area. Hydrocarbon odors and stained soil were noted in the dispenser sample taken as well as the two soil samples taken beneath UST T7. TPH-g and TPH-d were detected in samples T7C-9, T7C-14, and D-4. The area under the former dispenser and UST7 was further excavated until stained soil was no longer visible. AGE recommended the closure of this former UST facility.
- Fuel/Wastewater Spill Report for Mercury Air Center at 2161 East Avion Street. In May 2001, a spill of approximately 50-100-gallons of aviation fuel mixed with wash water onto a paved area at the southwest corner their facility. Cracks in the old pavement may have allowed for the contaminants to penetrate the soil. An oil-soaked area of dirt near the spill was also contaminated. A 500-gallon clarifier on the west side of the fuel dispensing area was also reported to regularly discharge clarified wastewater onto to the pavement south of the clarifier. RWQCB recommended the discontinuation of discharges of clarified water to the pavement and instead, haul 100 percent of the wastewater and fuel offsite for proper disposal.
- 1992 letter confirming the completion of Site investigation and remedial action for the removal of UST at the GE Aircraft Engines-Engine Maintenance Center at 1923 East Avion Street. The county of San Bernardino indicated that the extent of contamination observed in the Jet-A UST (Tank 11) and calibration fluid UST (tank 9) is limited and does not require further investigation.
- 1988 Phase I Environmental Audit prepared by Camp Dresser and McKee Inc. Table summarizes the USTs at Ontario International Airport, including 7 located at Beechcraft West, 5 at the National Guard Hangar location, and 12 related to the Engine Maintenance Center operated by General Electric. At this time, three of the 12 tanks had been removed. Of the nine tanks remaining, three reportedly failed integrity tests due to piping leaks and four had contaminated soil near them. The Beechcraft West facility was reported to store USTs of various fuel in seven tanks at their fuel farm with a total capacity of over 88,000-gallons.
- 1993 Underground Storage Tank Closure Plan for an 8,000-gallon UST (Tank 4) located within the GE’s Engine Maintenance Center at 1923 East Avion Street. The tank was used to store waste calibration fluid for 6-months and a dilute fluorescent penetrant waste stream for 9 years. No known releases have been associated with the tank.
- 1998 soil Investigation Report letter summarizing the subsurface soil investigation performed at Mercury Air Group/Raytheon at 2161 East Avion Street following the removal of a 500-gallon waste oil tank. The soil sample exhibited a total recoverable petroleum hydrocarbon (TRPH) concentration of 1270 milligrams per kilograms requiring further assessment of the area. A boring hole was drilled in the center of the former UST and detected concentrations of TRPH from non-detect to 35 mg/kg. Based on these results, CTL recommended the closure of the former UST area.
- 2006 Hazardous Waste Generator and Hazardous Materials Handler Report at GE Engine Services at 1923 East Avion Street. Staining was observed in the Campbell grinding room associated with Hangar 5 (the administration building), cleaning line room in Hangar 1,

and previous storage location for T-20 and T-21 adjacent to 61W-29. It was recommended that surface swab samples be taken to ensure the facility is acceptable for occupation.

- 2003 letter regarding the release of contaminants at 1801 East Avion Street. Federal Express accidentally released waste oil, fuel and/or halogenated solvents onto the soil and/or into groundwater. This letter is Federal Express's official notice that Los Angeles World of Airports is aware of the various contaminant releases by their company.

6.1.4 DTSC-Cypress Office

The DTSC-Cypress Office responded on 3 September 2021 with the records they had on file. The most recent documents on General Electric, 1923 East Avion St. could be found on Envirostor (80000416). As well as 95% of entire site documents pertaining to General Electric Test Cell at 2264 Avion Place could be found on Envirostor (36370024). These sites are talked about in more detail in Section 7.1.9.

6.1.5 Cal Fire-Office of the State Fire Marshall

Records from Cal Fire-Office of the State Fire Marshall (OSFM) obtained 15 September 2021 are summarized below.

- In July 2007 a small leak of potential fuel was identified at the fuel/water separator on the site at 2264 East Avion Drive. The leak appeared to be there for some time but was not a potential fire problem. No hazardous materials were released.
- In August 2017, a diesel fuel spill of approximately 5-gallons was reported at the ASIG maintenance yard on 1049 South Vineyard Avenue. Hazardous materials were released. The Jet A spill was reported to be covered with absorbent and was going to be cleaned up from a vendor on site.

6.1.6 RWQCB-Santa Ana

The RWQCB responded on 13 September 2021 with the records they had on file. All records for 1923 East Avion Street could be found on GeoTracker. Records pertaining to 2264 East Avion could also be found on GeoTracker with eight hardcopy folders available for review at their office. Storm Water information for 2500 Jurupa Street and 2264 East Avion were sent over in a link. No records could be found for 1049 South Vineyard Avenue, 1280 South Tower Drive, 1230 South Tower Drive, 1250 South Tower Drive, 1801 East Avion Drive, 1922 East Avion Drive, 2132 East Avion Street, 2161 East Avion Street, and 2475 East Avion Street.

6.1.7 San Bernardino County Assessor's Office

The San Bernardino County Assessor's Office identifies parcels 011326106, 011326107, 011326108, 011327101 and 011327102 as "City of Ontario" zoning and as exempt from tax assessment. No detailed information is available.

6.1.8 SWQCB GeoTracker

The Ontario International Airport located at 1923 East Avion Street is included in the GeoTracker online database with the case number "T10000012861" and is currently listed as "open-site assessment as of 3/28/2019." The Santa Ana RWQCB is listed as the lead cleanup oversight agency. The documents included in the database include a PFAS Order, OIA Extension Approval, Soil and Water Investigation Workplan, Preliminary Site Assessment Workplan, Technical Correspondences, and a Soil and Water Investigation Report.

General Electric Co-Jet Engine Test Cell Facility at 2264 East Avion Street is included in the GeoTracker online database with the case number "SL208133868" and is currently listed as "open-verification monitoring as of 2/5/2010." This property is under the control of San Bernardino County and Santa Ana RWQCB. The documents included in the database include a Referral to regional board, groundwater monitoring reports from 2006 to 2021, annual estimation letter for 2019-2020 and annual estimation letter for 2020-2021.

GE Test Cell Facility at 2264 East Avion Street is included in the GeoTracker online database with the case number "T0607100233" and is currently listed as "completed-case closed as of 3/1/2010." This property is listed as a LUST cleanup site and is under the control of the Santa Ana RWQCB and Department of Toxic Substances Control. The documents included in the database include monitoring reports for the years 1998, 1999, 2001, 2003, 2004, 2014, landowner notification requirements, transmittal letter, quarterly remedial action reports, quarterly status reports, soil sampling reports, soil vapor extraction well destruction report, closure/no further action letters.

The Ontario Air National Guard (Air Force) located at 2500 East Jarupa Street is included in the GeoTracker online database with the case number "T0607174695," 32055 "DOD100361500," 80536 "DOD100362900," Building "DOD100363000," SI WP "DOD100363100" and is currently listed as "completed-case closed as of 9/11/2000." This property is listed as a military cleanup site and is under the control of DTSC and Santa Ana RWQCB. The documents included in the database include a request for closure, site investigation report, and a preliminary site assessment report for PFAs.

City Rentals located at 1035 Vineyard Avenue is included in the Geotracker online database with the case number "T0607172337" and is listed as "completed-case closed as of 6/2/2000." This property is listed as a LUST cleanup site and is under the control of San Bernardino County and Santa Ana RWQCB. There are no documents provided in the database, but lead is listed as a potential contaminant of concern for the soil.

Aircraft Service International Group (ASIG) located at 2500 East airport Drive is included in the GeoTracker online database with the case number "T0607181149" and is listed as "completed-case closed as of 10/11/2016." This property is listed as a LUST cleanup site and is under the control of San Bernardino County and Santa Ana RWQCB. The documents included in the database include a remedial investigation report, waste manifests and weight receipts, site investigation of jet fuel spill, staff letter, referral to regional board, site investigation workplan, site investigation workplan response, amendment to workplan, request for closure of the site, email correspondence, workplan for vapor testing, vapor testing carried out on January 11, 2016-regulator response, vapor extraction testing report and request for closure, well destruction report, and a closure/no further action letter.

Avis Rent a Car located at Ontario Airport is included in the GeoTracker online database with the case number "T0607100472" and is listed as "completed-case closed as of 10/22/1999." This property is listed as a LUST cleanup site and is under the control of San Bernardino County and Santa Ana RWQCB. The documents included in the database include an Underground Storage Tank Closure Report from 1997.

Fluor Corp. Flight Operations located at 1150 Vineyard Ave. is included in the GeoTracker online database with the case number "T0607100238" and is listed as "completed-case closed as of 2/18/1992." This property is listed as a LUST cleanup site and is under the control of San

Bernardino County and Santa Ana RWQCB. There are no documents provided in the database, but aviation is listed as a potential contaminant of concern for the soil.

6.1.9 DTSC-EnviroStor

The Ontario Army Airfield at 1923 East Avion Drive is included in the EnviroStor online database with the case number “80000416,” and is currently listed as “no further action as of 3/5/2012.” DTSC is listed as the lead agency and the site is listed as a formerly used defense site (FUDS). The documents included in the database include a Preliminary Site Assessment report and Preliminary Endangerment Assessment report completed in 2011. An Inventory Project Report completed in 1992 was also included.

GE Engine Services Inc at 1923 East Avion Place is included in the EnviroStor online database with the case number “80001638,” and is currently listed as “inactive-needs evaluation as of 3/20/2013.” DTSC is listed as the lead agency. There are no documents included in the database, but aerospace rocket testing/launch, and jet fuel storage/refueling are listed as past uses that may have caused volatile organic (8260B VOCs) to release into the soil and groundwater (uses other than drinking water).

GE Engine Test Cell Facility at 2264 East Avion Place is included in the EnviroStor online database with the case number “36370024,” and is currently listed as “refer: RWQCB as of 5/7/2019.” DTSC and Santa Ana RWQCB are listed as the lead agencies. The documents included in the database include Preliminary Assessment Report, Removal Action workplan, Remedial Investigation and Remedial Action Plan, Design/Implementation Workplan, Operation and maintenance Agreement, 5 Year Review Reports, Quarterly Monitoring Reports, a letter from LAWA to remove LAWA from General Electric Engine Services Test Cell facility, and Lead Agency Regulatory Oversight Transfer to SARWQCB. General Electric, Main Facility at 1923 East Avion Street is included in the EnviroStor online database with the case number “71002298,” and is currently listed as “inactive-needs evaluation.” There is no lead agency listed and there are no documents included in the database. The site is related to GE Engine Services Inc (80001638), GE Engine Services Inc (CAD009542721), and GE Engine Services Test Cell facility (36370024).

The Ontario Air National Guard located at 2500 Jarupa Street is included in the EnviroStor online database with the case number “36970008” and is currently listed as a “certified closed base as of 9/11/2000.” DTSC is listed as the lead agency. The documents included in the database include a Preliminary Endangerment Assessment Report, two Finding of Suitability to Transfer, two Environmental Baseline Surveys, Certification of Remedial Action, and an Inventory Project Report.

Observation Squadron OAA located at Ontario Army Airport (at the south end of Vineyard Avenue) is included in the EnviroStor online database with the case number “80000874” and is currently listed as “inactive-needs evaluation as of 7/1/2005.” DTSC is listed as the lead agency. The documents included in the database include a 1999 USACE Inventory Project Report.

6.1.10 National Pipeline Mapping System

The NPMS Public Viewer² enables users to view pipeline locations but limits the scale of the pipeline maps in accordance with the Pipeline and Hazardous Materials Safety Administration (PHMSA) security policy.

² <https://pvnpm.phmsa.dot.gov/PublicViewer/>

A Hazardous Liquid Pipeline is located approximately 0.6 miles to the north of the site, extending along East Airport Drive. A breakout tank and liquid accident is also recorded approximately 1.2 miles to the northwest of the Site.

6.1.11 CalGEM

The CalGEM³ online Well Finder mapping application interfaces with the online Well Statewide Tracking and Reporting System (WellSTAR) data base and is updated nightly. The Well Finder is used to find and locate oil and gas wells and other types of related facilities throughout the state.

A review of the CalGEM Well Finder for the Site identified one plugged dry hole operated by Argyle Campbell & Co. approximately 6,300 feet to the northeast, and one idle oil and gas well operated by Italian Vineyard Co. located approximately 8,100 feet to the northeast.

The Site is not within a mapped oil field and no oil wells appear to have been located on-Site.

6.2 Regulatory Database Review

GSI contracted with (ERIS) to compile a database report that summarizes the results of a search of federal, state, and tribal agency databases to assess whether the Site or nearby properties are under investigation for potential environmental issues or have been identified as conducting operations that could potentially impact the environment. The database report includes searches of regulatory databases of sites with environmental liens, deed restrictions, land use restrictions, engineering controls, and institutional controls.⁴ Significant findings from the database report are summarized below and in Section 7.0. The database report is included as Appendix H.

6.2.1 On-Site Database Information

The Site is listed on several databases. No database records were identified that indicate that the Site is under investigation for potential environmental issues. Additional information obtained from historical reports is included in Section 6.1.

- HIST Tank – 7 hazardous storage containers at Beechcraft West facility at 2161 East Avion Street.
- Delisted Tank – Mercury Air Center at 2161 East Avion Street in 2017.
- Delisted HAZ – Jet Systems International Inc. at 2161 East Avion Avenue Hangar #2 in 2018.
- CERS HAZ – Ameriflight, LLC had violations in 2014 for failure to complete and/or electronically submit a business plan when storing and handling hazardous materials.
- Historical EPA ID numbers utilized to track manifests are listed in HAZNET database and were also identified in the DTSC Hazardous Waste Tracking System (HWTS).⁵ The following Generator EPA IDs have been associated with the Site.

³ <https://www.conservation.ca.gov/calgem/Pages/WellFinder.aspx>

⁴ In some cases, environmental databases are not updated by the specific regulatory agencies for periods of up to 1 year (depending on the database). The dates of updates are provided in in the Regulatory Database Search Report, included in Appendix H.

⁵ <https://hwts.dtsc.ca.gov/>

EPA ID Number	Address	Name	First Record	Year Inactive
CAL000038317	2161 E Avion St.	Beatrice/Hunt-Wesson	1991	1997
CAD982019606	2161 E Avion St.	Beechcraft West	1988	1998
CAX000220657	2161 E Avion St.	Beechcraft West	1985	1986
CAL000140205	2161 E Avion St.	Certified Aviation Services Inc.	1998	2005
CAL000140924	2161 E Avion St.	So Cal Edison/Ontario Aircraft	1998	2012
CAD009542721	1923 E Avion St.	GE Engine Services Inc.	1982	2009
CAR000183244	2475 E Avion Dr.	ExpressJet Airlines Inc.	2007	2009

- According to the San Bernardino County-CUPA List (Sanbern CUPA), the Site has numerous inactive and active permits associated with the on-site locations.

Facility ID	Address	Name	Year	Active/Inactive	Type
FA0011864	2161 E Avion Ave. Hangar 2	Jet Systems International Inc.	2019	Inactive	Small Quantity Generator and Hazardous Materials 1-3 Chemicals
FA0011865	2161 E Avion Ave. Hangar 1	Jettpro Line Maintenance-Atlantic	2018	Inactive	Small Quantity Generator and Hazardous Materials 1-3 Chemicals Special
FA0006303	2161 E Avion St.	Ontario Aircraft Operations	2012	Inactive	Hazardous Waste Generator (11-25 employees) and Hazmat Handler (11-25 employees)
FA0010677	2161 E Avion St.	Mercury Air	2007	Inactive	Special Generator and Special Handler
FA0011845	2161 E Avion	Jettpro Line Maintenance-United	2021	Active	Small Quantity Generator and Hazardous Materials 1-3 Chemicals
FA0004670	2161 E Avion St.	Mercury Air Atlantic Aviation	2013	Inactive	
FA0011874	2161 E Avion St.	Ameriflight, LLC	2012/2021	Inactive/Active	Special Generator/Hazardous Materials 1-3 Chemicals Special

- Historical Hazardous Substance Storage Information Database (HHSS) – Beechcraft West had 7 tanks listed. These tanks are previously summarized in Section 7.0.

- CHMIRS – Reported hazardous material spill at Mercury Air Center at 2161 East Avion Street.
- Emergency Response Notification System (ERNS) – At the Engine Maintenance Center located at 1923 East Avion, one 55-gallon drum leak was reported in 1991. The spill was approximately 2-gallons of C 623 60% phosphoric acid (4x5 feet) and was contained on concrete floor. 100-gallons of phosphoric acid was accidentally discharged into the cleaning line sump at Engine Maintenance Center in 1991. The spill was contained on site and product neutralized with caustic soda. 80-gallons of water and 80-gallons of sodium hydroxide released in 1991 due to tank overflow due to compressor failure on flow lines. The material was contained on the facility and pumped into barrels.

6.3 Off-Site Properties

A preliminary database review of the Site and surrounding properties using the DTSC's Envirostor online database and RWQCB's Geotracker online database was completed. Significant records identified for properties located closest to the Site are included in this section. Additional on and off-Site database review will be conducted during the Phase I ESA implementation.

6.3.1 Ontario International Airport⁶

This property is located adjacent to the Site to the east on a former training area and shooting range. The GeoTracker file lists the RWQCB as the lead agency for a site assessment that has been open as of 28 March 2019. The potential contaminants of concern are per- and polyfluoroalkyl substances (PFAS). Documents included in the database include a work plan and preliminary site investigation report for the determination of the presence of PFAS at the site.

The preliminary site investigation identified two areas at the Site where AFFF was either known to have been used or likely to have been used: the Shooting Range and Former Training Area. AFFF was potentially used at the Shooting Range in the 1990s as well as from 2000 to 2015 at the Former Training Area. A UST for AFFF also exists in the Former Training Area. In accordance with the 2019 Work Plan for Preliminary Investigation of PFAS, soil and groundwater samples were taken from various locations across the two areas of concern and analyzed (Alta 2020).

⁶ https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T10000012861

2021 PFAS Sampling Area

The 2020 Preliminary Site Investigation Report for the Determination of the Presence of Selected PFAS concluded the following:

- Concentrations of PFAS in soil sampled at Areas 1 and 2 generally exhibited a decreasing trend with depth with higher concentrations detected in shallow soil to depths of up to 5 feet and lower to non-detect concentrations collected from deeper samples at 10 feet depth.
- Based on the results of the general chemistry analysis and comparison to primary and secondary drinking water standards, the groundwater sampled as part of this investigation may be suitable for drinking water.
- Concentrations of PFAS in groundwater varied but were generally not detected above laboratory reporting limits for most compounds.

6.3.2 General Electric Test Cell Main Facility⁷

This property is listed as a Tiered Permit site type. Related facilities include the following:

- GE Engine Services Inc (EnviroStor 80001638)⁸ – Listed as “Inactive – Needs Evaluation” under the Corrective Action program.
- GE Engine Services Inc (CAD009542721)⁹ – Listed as “Closed” under the Haz Waste – RCRA Interim Status Permit.
- GE Engine Services Test Cell Facility (AKA GE Aircraft, EnviroStor 36370024)¹⁰ – listed as “referred to RWQCB” under the State Response program. This portion of General Electric is addressed in the Surrounding Properties Section of this document.

This property is located to the south of the Site and has been used as a test facility for commercial and military jet engines since 1956 to the present. EnviroStor lists DTSC as the lead agency in charge of site cleanup. Approximately 6,000-gallons of hazardous waste were disposed of in dry wells and there is an estimated 600 cubic yards of waste and contaminated soil on site. Traces of 1,1,1-trichloroethane (TCA), tetrachloroethene (PCE), chloroform, naphthalene, 2-methylnaphthalene, and volatile aromatic (xylene, toluene, ethylbenzene) were reported in soils near the dry wells in 1987. Hazardous substances disposed of in drywells have the potential to enter groundwater and contaminate drinking supplies, the workers on site may also be exposed to VOCs if contaminated soils are excavated.

A consent order between General Electric (GE) and Department of Health Services (DHS) was signed September 28, 1988, for groundwater and soil remediation. A remedial investigation/feasibility study was done in 1993 to fully characterize the site, and vapor extraction treatment systems were put in place in 1996. An enforceable agreement for operation and maintenance was signed by DTSC and GE in August 1998, and reports on the status of operation have been submitted to DTSC quarterly since. The concentrations of VOCs in shallow soil areas A, B, and C have reached acceptable closure levels with the shallow extraction wells needing to be maintained until sufficient data can be gathered.

In 2008, GE submitted the second five-year review report recommending completion of VOC remediation for both shallow and deep soils. In 2013, DTSC discussed this recommendation with RWQCB who recommended that DTSC hold the decision until confirmation samples can be taken to determine whether VOCs from the soil have been migrating to groundwater. A workplan to install additional groundwater monitoring wells and adjacent soil vapor probes was approved in 2013 and in 2014, GE completed drilling and installation.

In 2015, RWQCB concluded that soil is no longer a source of releases to groundwater. Groundwater monitoring continues under RWQCB’s oversight. In 2019, RWQCB contacted DTSC regarding increasing trends of VOCs observed in offsite groundwater monitoring data and the project was transferred to SARWQCB on May 6, 2019, in order to minimize overlap of investigation between the two agencies.

6.3.3 General Electric Co. Jet Engine Test Cell Facility located at 2264 Avion Drive, Ontario¹¹

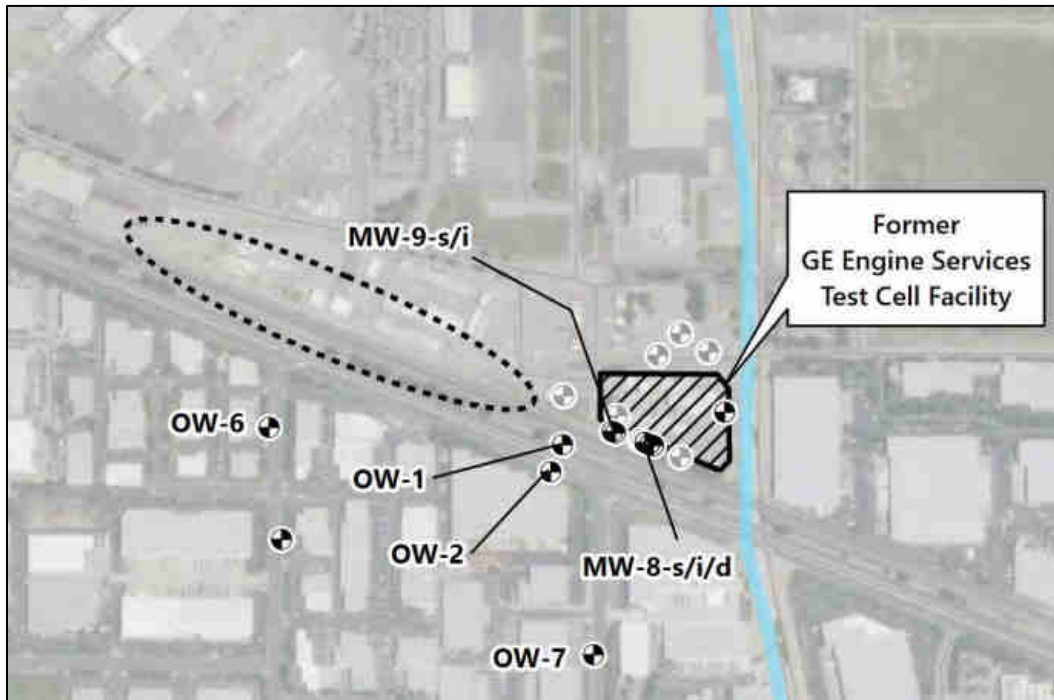

This site has been operated by General Electric Engine Services as an aircraft engine facility since 1956. Chlorinated solvents were used in the 1950s and 1960s. In the early 1970s, 1,1,1-trichloroethane (1,1,1-TCA) replaced TCE. Groundwater monitoring began in 1991 and has been on-going on a quarterly basis since first quarter 2000. Work is currently being performed in accordance with State of California, Department of Health Services (DHS) Consent Order No. 88-89-009CO. The RWQCB became the lead agency for groundwater investigations in 1994. The DTSC, formerly the DHS, subsequently released investigation of all media to the RWQCB in May 2019. The groundwater monitoring program consists of measuring depth to groundwater (DTW) and collecting groundwater samples from up to 35 on-site and off-site monitoring wells. Additionally, four piezometers located adjacent to Ely Basins owned by San Bernardino County are included in the groundwater monitoring program. The constituent of concern in groundwater are VOCs, primarily TCE.

A 2021 Work Plan for Soil Vapor and Groundwater Investigation at Upgradient and Cross-Gradient Locations is the most recent document available on the Geotracker database website. The objective of the work plan is to evaluate potential upgradient sources of VOCs observed at groundwater monitoring well OW-6, which is located 1,300 feet west and upgradient of the General Electric facility. This well has identified an increase in TCE concentrations in groundwater since 2015. The well is screened between 251 and 276 feet below ground surface (bgs).

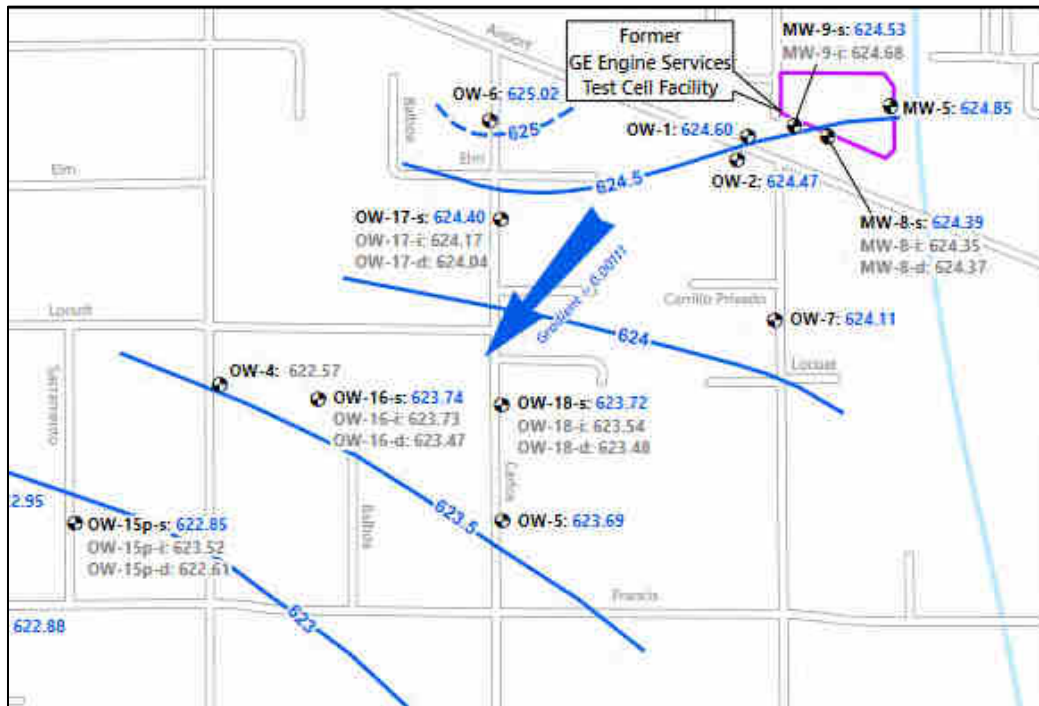

The site is open with verification monitoring as of 5 February 2010. Tetrachlorethylene (PCE) and Trichloroethylene (TCE) are listed as the potential contaminants of concern. The aquifer used for drinking water is the potential media of concern. According to a Second Quarter 2021 Groundwater Monitoring Report, analytical results for 22 of the 31 wells sampled indicated TCE concentrations greater than the California Maximum Contaminant Level (MCL) of 5 micrograms per liter ($\mu\text{g/L}$). However, TCE concentrations in the most downgradient monitoring well (OW-11) have remained below the MCL since groundwater monitoring began.

The Ontario Air National Guard Station is an approximately 14-acre site that is located off-site to the east and at the southern portion of parcel 68 (68-22). It was originally used as a U.S. Army Airfield from 1942 through 1948, with air and pilot training as its primary use. It closed in September 1998 and is under the jurisdiction of the Force Base Conversion Agency. It is a formerly used defense (FUD) installation. In 1989, RWQCB issued a Cleanup and Abatement Order (CAO) to investigate the ground water and has been overseeing their site inspection activities since. There are three Installation Restoration Program sites (SS-01, ST-02, and ST-03) and five area of concerns (AOCs) that have been investigated. Site SS-01 covers the area between the maintenance shop (Bldg.03), shed (Bldg. 14) and the Cucamonga Creek channel. It was approved for closure by DTSC and the Santa Ana RWQCB based on confirmation samples collected in 2000. Site ST-02 and ST-03 contained eight USTs that were closed in 1996 under the supervision of the San Bernardino County. The five AOCs included an 8,000-gallon septic tank for Building 2 that discharged into a leach field. The Septic Tank and Leach Field were removed and disposed of in 1999. Two concrete Oil/Water Separators at Bldg. 06 and 14 were removed in 1995 and 1996. A wash rack at Bldg. 10 and a former Fire Training Area were investigated in 1999 and found to be clean. Building 2 and Building 6 were found to have stored hazardous wastes at their facilities. The current site conditions and analytical test data indicated no further action is required at all installation restoration program sites and AOCs.¹⁸

A 2015 Per-fluorinated Compounds (PFCs) Preliminary Assessment was conducted by AMEC Foster Wheeler Environment & Infrastructure to investigate whether aqueous film forming foam (AFFF), containing PFCs, were stored, handled, used, or released at the former Ontario ANGS. Research was conducted for the years 1970 through 1998 using personal interviews, online research of Administrative Record, documents requested and provided by the Air Force Civil Engineer Center, and archival research at the Air Force Historical Agency. The information obtained during the research indicated that AFFF, containing PFCs, were not used at the former Ontario ANGS.¹⁹

6.3.5 Aircraft Service International Group at 2500 East Airport Drive, Ontario²⁰

This site is located within the Ontario International Airport, northeast of the Site, and contains an underground fuel storage tank farm formerly used for jet fuel storage. In June 2006, a spill of approximately 5,500-gallons of Jet-A fuel occurred on the ground surface. Approximately 5,052-gallons of the spilled fuel was recovered from the ground surface, and 315 tons of contaminated soil around the USTs was excavated and thermally treated in June 2010. TPH (Jet A) concentrations of 12,000 mg/kg, 100 mg/kg, and TPH (DRO) concentrations of 90 mg/kg, and 33 mg/kg were detected at depths of 2 feet, 4 feet, 6 feet, and 8 feet bgs.

Between January and February 2012, one 20,000-gallon gasoline UST, one 20,000-gallon diesel UST, and five 40,000-gallon Jet-A fuel USTs were removed from the site. After UST removal, approximately 2,800 tons of petroleum-contaminated soil were removed from the UST excavation and transported to TRS in Azusa, California for treatment and disposal by low-temperature thermal desorption. Field observations and laboratory analyses of soil samples taken during the UST removals were consistent with the known history that a release of petroleum hydrocarbons has occurred at the site.

¹⁸ https://www.envirostor.dtsc.ca.gov/public/profile_report.asp?global_id=36970008

¹⁹ Geotracker T0607174695

²⁰ https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0607181149

Following a 2014 Work Plan, a 24-hour high vacuum soil vapor extraction test was performed in January of 2016. The total equivalent number of hydrocarbons recovered through vapor extraction during the 1-day event was 3.80 pounds (based on laboratory data), or 7.78 pounds (based on the field organic vapor analyzer data). The highest concentration of TPH (GRO) was 260 ppmv, and the highest concentrations of BTEX and MtBE were <0.20 ppmv, 0.97 ppmv, 0.56 ppmv, 3.5 ppmv, and <0.2 ppmv. The Site was evaluated in accordance with the criteria specified in California's Low-Threat Underground Storage Tank Case Closure Policy. It was concluded that the site does not present a threat to groundwater or a significant threat to human health. Due to the unlikelihood of the property use changing anytime soon, site closure was recommended. The case was closed as of 10/11/2016.

6.4 Environmental Lien Search and Activity and Use Limitations

GSI was not retained to perform a search for environmental liens and activity and use limitations (AULs) at the Site.²¹ We understand Mr. Winters is researching liens through their land title review work and we understand they have not identified any liens or AULs to date.

Databases were searched by ERIS that record information related to environmental liens and AULs and did not include any listings for the Site. The Site also is not on the online listing of deed restricted properties maintained by DTSC²² or SWRCB.²³

7.0 SUMMARY OF FINDINGS

The Site is located in Ontario, California and comprises of approximately 97 acres of the Ontario International Airport that was previously agricultural property or vineyards until the mid to late 1950's. The Site consists of 24 buildings and Hangars, ancillary structures, and parking facilities. The Site is located north of East Avion Street and west of the Cucamonga Creek with a small portion connecting to South Hellman Avenue. The Site is broken down into five parcels, Parcel 61, Parcel 62, Parcel 63, Parcel 67, and Parcel 68.

Historically, Parcel 61 was occupied by Northrop Aircraft Company and Douglas Aircraft in the 1950s. Lockheed Aircraft occupied Hangar 4 between 1955 and 1980. In 1955, GE Engine Services, Inc. moved their operations to the Site and Northrop vacated. The former Los Angeles Police Department (LAPD) Emergency Vehicle Operations Course (EVOC) was previously located in the center of the Site along the western border of Parcel 62. Historical use on Parcel 61 has included the use of chlorinated solvents, the storage and dispensing of fuel, fire suppression chemical storage, and hazardous waste storage and waste treatment (including clarifiers, wash racks, and sumps). Multiple underground storage tanks (USTs) have been documented at the Site and documentation of removal was not identified during this investigation.

Parcel 62 was primarily agricultural until the 1950s. In 1983, the main Hangar and office building were developed, and by 1987, the second Hangar was in use. In 1994, an outbuilding maintenance area was constructed and put into service. A fuel farm was located on the southwestern corner of the Site and two clarifiers, and a maintenance shop have been documented on the Parcel. Historical use of chemicals at Parcel 62 has included chlorinated

²¹ AULs are defined in the ASTM Standard as legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

²² https://www.envirostor.dtsc.ca.gov/public/deed_restrictions.asp

²³ https://www.waterboards.ca.gov/water_issues/programs/deed_restrict/

solvents, and fire suppression chemical storage. Poor housekeeping was identified in the vicinity of unmarked drums and stained concrete around the fire suppressant storage area within the Guardian Jet Center. Multiple USTs have been documented at the Site. Although it appears that the USTs located on Parcel 62 have been removed, closure documentation was not identified, and some impacted soil from at least one leaking UST remains in place at the Site.

Parcels 67 and 68 historically included the Ontario Air National Guard Station (ANGS) with ancillary structures to the south and east. In the 1950s, a Hangar, fire station, fueling station, and wash rack were constructed at the Site. In 1952, the 196th Tactical Air Support Group was assigned to the Ontario Airport. During this time, the facilities were updated, and operations included the maintenance of aircraft vehicles and aerospace ground equipment. A munitions bunker was constructed in the 1950s and later used by Lockheed in the 1990s for storage of ammunition and explosives. The 196th vacated the Site in 1983 and the 148th Combat Communications Squadron (CBCS) occupied the Site from 1984 through 1998. The ANGS was closed in September 1998. Historical use on Parcels 67 and 68 has included the use of clarifiers, Above ground storage tanks (ASTs), and USTs. Although USTs have been removed, documentation of regulatory closure was not identified and there is reference to one UST that was not accounted for during the removal process. Poor housekeeping was identified in the vicinity of a leaking waste drum.

The southern portion of the Site is comprised of Parcel 63 and a small portion of Parcel 61. This location has been primarily agricultural and historically stored a bunker. These parcels are currently utilized for parking and include a large storm drain outlet.

During the three-day Site reconnaissance, many of the features identified in the Parcel descriptions above were identified and added to Table 1 and Figure 3. Historic UST areas were identified next to the former California Air National Guard (CANG) Hangar and southwest of the current Guardian Jet Center Hangars. Three concrete secondary containment structures were observed at 61W-29 where aboveground storage tanks used to be held. Two clarifiers were observed east of the Guardian Jet Center Hangars as well. A wash rack and backfilled clarifier was identified northeast of the CANG Hangar as well as a former fueling station. Multiple locations across the Site were identified to have staining. A concrete pad with red staining was observed to the east of the Guardian Jet Center Hangars. Inside of the Guardian Jet Center southern Hangar, staining was observed around the aqueous film forming foam (AFFF) suppression system. The large hydraulic jacks adjacent to Hangar 1 were observed to be leaking oil that had stained the asphalt underneath them. Two above ground fuel tanks were observed in secondary containers inside a shed at the former CANG maintenance yard. AFFF fire suppression tanks were observed inside the Guardian Jet Center Hangars. A shed to the northeast of Hangar 3 and the ancillary structure next to Hangar 4 were observed to have hazardous waste storage signs. Multiple drums and drains were located throughout the Site.

This assessment has revealed RECs, CRECs, and de minimis conditions in connection with the Site, which are summarized in Section 1.0 and Table 1.

8.0 DATA GAPS OR FAILURES

Standard ASTM E1237-13 defines a “data gap” as a lack of or inability to obtain information required by the Standard despite good faith efforts by the environmental professional to gather the information. Significant data gaps are identified as those which affected the ability to identify RECs. A “data failure” is a type of data gap and is considered a failure to achieve the historical research objectives even after reviewing reasonably ascertainable standard historical sources.

This Phase I ESA has revealed no significant data gaps or data failures and there were no deletions or deviations from ASTM Practice E-1527-13 in conducting this Phase I Environmental Site Assessment.

9.0 CERTIFICATION

The Site is defined as the following:

SITE IDENTIFICATION	
Name:	Proposed 97-Acre Project Magellan Airport Cargo Distribution
Address:	97-Acre Portion of the Ontario International Airport
City:	Ontario
County:	San Bernardino County
State:	California
APN(s):	Parcel 61: 011326106 (approximately 48 acres) Parcel 62: 011326107 (approximately 21 acres) Parcel 63: 011326108 (approximately 2 acres) Parcel 67: 011327101 (approximately 12 acres) Parcel 68: 011327102 (approximately 14 acres)

This environmental review of the Site as defined above was conducted by GSI on behalf of Mr. Winters. The review conducted by GSI meets or exceeds the requirements for a Phase I ESA specified in the ASTM Standard.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Bita Tabatabai, PE

TABLE 1
Site Features - Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Reconnaissance Conducted on October 20-22, 2021

Parcel	Map Feature Number	Within New Building Footprint?	Off-Site	Reference (Report, Interview, APs, or Recon)	ASTM Designation					Description	Explanation of REC	Potential PFAS	Minimum Constituents of Potential Concern (COPC)	Photo Log Number
					Not an REC	de minimus	REC	CREC	HREC					
Site-Wide	Site-Wide	Unknown		Historical Phase I ESAs		•				Historical Agriculture - According to documented history of the Site, until the mid to late 1950's the Site was primarily agricultural with some vineyards.	Pesticides and arsenic are often present in shallow soil at properties that have documented historical agricultural practices. As the Site will remain paved and residential use of the Site is not planned, the potential for these contaminants of concern in shallow soil is unlikely to be the subject of an enforcement action if brought to the attention of appropriate governmental agencies and is considered a <i>de minimus</i> condition.		Pesticides, arsenic	NA
61W	1	•		CDM 1990, SCAQMD Records, Mactec, 2003; SBFD 1993ppp			•			General Electric Hangar 4 Area - This area has been identified as part of the General Electric (GE) Leasehold and is also identified as Hangar 4. GE Engine Services Facility Equipment Report has record of permits (1980s and 1990s) for degreasers that used 1,1,1-trichloroethane (1,1,1-TCA), abrasive blasting, spray booths, amine (or DEA) regeneration, service stations for dispensing and storing gasoline, storage tank 1,1,1 - TCA, miscellaneous inorganic stripping, tank chemical milling, and canceled permits for gasoline storage tanks, fuel oil storage tank, jet engine test cell facility, degreaser 1,1,1-TCA, and tank surface preparation-other acids. According to a historical Phase I ESA for Hangar 4, a septic tank/each field was utilized from approximately 1956 to 1990, when the building was connected to a sanitary sewer system. The historical septic tank/each field location has not been identified and closure or sampling data is not available (Mactec, 2003). Waste removed from GE in 1993 reportedly included spent batteries, waste water pretreatment sludge, aluminum oxide grit residue, oil soaked materials, epoxy resin, corrosive mixtures, flammable liquid, soil contaminated with Stoddard Solvent (likey from UST removal), medal oxide powder, fiberglass with bentonite, RCRA empty drums contaminated with solvents, soil contaminated with jet fuel (likely from UST 11 removal), water and jet fuel, bulked solvents, solvents, waste oil, 1,1,1-TCA distillation sludge, bottom sludge from cooling tower, "Poison B liquid", oil-soaked materials, machine coolant.	Historical use, including the use of chlorinated solvents as well as storage and dispensing of fuel in the vicinity of the GE Leasehold throughout the 1980's and early 1990's was likely to have released contaminants to the environment. Historical use of this area is indicative of a release to the environment and is considered a REC.		Hydrocarbons, VOCs, Stoddard Solvent, Metals, Pesticides, Herbicides	NA
				Reconnaissance			•			Hangar 4 (Outside): Hangar 4 is constructed of corrugated steel (with flaking paint), steel framing, roll up and sliding doors. A truck scale is located north of the hangar. A maintenance/storage shed is located in the northwest corner of the building that is surrounded with a chain-link fence. Electrical transformers/substation is located west of the hangar. An asphalt patch was observed that contained a sewer vault west of the hangar. Fire suppression piping and valves are located west of the hangar and east of a chain-linked fence.	It is GSI's experience that historical maintenance/storage sheds can often store leaking and damaged equipment that release contaminants to the environment. This area is considered part of Hangar 4. Historical use of this area is indicative of a release to the environment and is considered a REC.		Hydrocarbons, VOCs, Metals, PCBs	21 to 24 205 to 206
				Reconnaissance			•			Hangar 4 (Inside): Furniture and office equipment storage, Delcrete/Delpatch-5 gallon buckets (x3), a large electrical box, fire hoses, Flynn scales, fire extinguishers, ash trays, and pallets of leaking of 5 gallon buckets were observed. Buckets: BioSolve pink water (56, 5-gallon capacity; several leaking); AMEREX BC Purple K dry chemical (9, 5-gallon capacity; several leaking); Winsol (13, 5-gallon capacity) containing fire suppression "training foam"; Blue Stx adhesive (1, 5-gallon capacity; one leaking); MET LX (7, 5-gallon capacity), Super Market Wax Stripper (8, 5-gallon capacity), American Traffic Products Inc.-red fast dry paint (1, 5-gallon capacity), Ennis paint-white traffic paint (1, 5-gallon capacity; 7 empty), Ecomate MTC degreaser (1, 5-gallon capacity). The buckets containing fire suppression chemicals may contain PFAS.	GSI observed release of chemicals to the environment from multiple stored chemical buckets, including buckets that may contain PFAS chemicals that are commonly used in AFFF fire suppression foam. This area is considered part of Hangar 4. Observed release to the environment is considered a REC.	•	Hydrocarbons, PFAS, Metals, VOCs, PFAS	24 to 28
				Reconnaissance			•			Hangar 4 Inside Haz Storage Building (61W-23): A hazardous waste storage label was located on the exterior door to the hangar. Observations include: an empty flammable liquid cabinet, Genlabs Lemon Cleaner (1, 5-gallon capacity), traffic paint buckets (9, 5-gallon capacity), International Coatings Traffic Paint (32, 5-gallon capacity), overhead fire suppression system (water only), light bulbs, wood pallets, electronics, electrical meters, fuse boxes, circuit boards, a portable eye wash, station, an empty 55-gallon drum labeled 1A2/Y1.2/100, 2 pallets full of cleaning supplies (approximately 72 boxes), cleaning pads and sweepers, and overhead lighting.	This area is considered part of Hangar 4. It is GSI's experience that historical drum storage areas are indicative of sources of contaminant release to the environment. Historical use of this area for hazardous waste storage is indicative of a release to the environment and is considered a REC.		Hydrocarbons, Metals, VOCs	29 to 30
61W	2			Reconnaissance	•				Included in 61W-1-crane system on top of concrete pad	No REC		NA	NA	
61W	3			Reconnaissance	•				Included in 61W-1-truck scale	No REC		NA	205	
61W	4			Reconnaissance	•				Included in 61W-1-electric substation with a sign that reads "high voltage"	No REC		NA	23	
61W	5			Reconnaissance	•				Sloped concrete patch leading to the back door for 61W-23	No REC		NA	NA	
61W	6			Reconnaissance	•				Inaccessible roll off containers and a concrete pad where large propane ASTs used to stand.	No REC		NA	31	
61W	7			Reconnaissance	•				Fire sprinkler piping and an excavation enclosed with metal poles.	No REC		NA	32	

TABLE 1
Site Features - Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Reconnaissance Conducted on October 20-22, 2021

Parcel	Map Feature Number	Within New Building Footprint?	Off-Site	Reference (Report, Interview, APs, or Recon)	ASTM Designation					Description	Explanation of REC	Potential for PEAS	Minimum Constituents of Potential Concern (COPC)	Photo Log Number
					Not an REC	<i>de minimus</i>	REC	CREC	HREC					
61W	8 and 42			SBCFD Records from 1992.					•	Historical USTs with Removal documentation- Historical documentation identifies this as the approximate historical location of USTs: -One (1) 2,000-gallon Jet A UST (UST 11) excavated and removed in 1992.	Dames and Moore (1992) collected samples during UST removal and identified Jet-A fuel impacts that decreased with depth to the total depth of the excavation of 14 feet. A 2 April 1992 letter from the County of San Bernardino EHS indicates that UST 11 was removed and soil impacted with Jet-A was identified to attenuate to a depth of 14 feet bgs. It appears that the impacted soil was left in place and the SBDEH noted that it was "unlikely that existing contamination poses a threat to the local environment." Additional reference to the "excavation of the Calibration Fluid" notes that the actual extend of affected soil "will be more thoroughly defined after removal activities recommence for Tank 9 and the adjacent Tank 10 (also containing Calibration Fluid)." The remaining impacted soil with documented approval from SBDEH is a CREC.		Hydrocarbons, VOCs, Metals	33
61W	9			Reconnaissance	•					General Telephone underground utility enclosed in fencing.	No REC		NA	34
61W	10			Mactec, 2006 (Figure 2)					•	Hazardous waste storage structure: Concrete slab with concrete secondary containment berm, concrete ramp leading into the containment area, chain-linked perimeter fence, central floor drain, and corrugated steel roof. Several concrete patches (possibly former boring/sampling locations) observed in the concrete slab near the floor drain, and several outside the hazardous waste storage structure. A hazardous yard and EHS sticker was observed on the window of a storage shed located northwest of the hazardous waste storage structure.	It is GSI's experience that historical hazardous waste storage buildings often have stored damaged containers that release contaminants to the environment. This structure has a drain located in the middle of the concrete slab, which may have provided a direct path to the subsurface for any hazardous waste that was released within the structure. Historical use of this area for hazardous waste storage is indicative of a release to the environment and is considered a REC.		VOCs, Hydrocarbons, Metals	35 to 40
61W	10			Reconnaissance, SBFD records					•	Second storage awning: Concrete slab with concrete secondary containment berm, desk supplies, e-waste, office furniture, computer equipment, a water dispenser unit, printers, ink cartridges, keyboards, fluorescent light bulb housing, water bottles and a mini-fridge. A 1993 figure from SBFD agency records identifies this area as the "Expanded Drum Storage Area (HWMU No. 5)"	This drum storage area was identified as a Hazardous Waste management Unit (HWMU) in historical documents. It is GSI's experience that historical drum storage areas are indicative of sources of contaminant release to the environment. Historical use of this area for hazardous waste storage is indicative of a release to the environment and is considered a REC.		Metals	35 to 40
61W	10			Reconnaissance	•					Storage shed: Elevated platform with wood beams, wood floor, painted with corrugated steel and is empty with wood racks inside. Beehive within the east outer-wall.	No REC		NA	35 to 40
61W	10			Reconnaissance	•					Electrical building: This structure is made of concrete blocks and is empty inside.	No REC		NA	35 to 40
61W	11			Reconnaissance, SBFD agency records, 1993.					•	Hangar 3 - Constructed of painted corrugated steel, epoxy coating on the roof, a concrete slab, trench drains in front of the roll-up doors, transformers, a fire line, fire extinguishers, overhead lighting and HVAC, restrooms, false walls, water heaters, a 5 gallon paint bucket, a circuit board, a server room, and broken glass windows Historical records identify this building as the former "Machine Shop and Heat Treat" (Canonie Environmental, 1993).	It is GSI's experience that machine shops are often sources of contaminant release to the environment, however, the Site reconnaissance did not identify anything that would be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. As such, the historical use of Hangar 3 is considered a <i>de minimus</i> condition.		Lead, metals	41 to 42, 41A and 42A
61W	12			Reconnaissance	•					Loading dock and trash enclosure.	No REC		NA	43
61W	13			Reconnaissance	•					Air museum - Constructed of corrugated steel and concrete. Inside: mannequins, historical uniforms and photographs, a model airplane, airport signs, an old tower light, movie posters, an electrical room, IT and storage room, a conference room, and office spaces with file cabinets and desks.	No REC		NA	44 to 45
61W	14			Reconnaissance	•					This area is connected to 61W-16 and is unoccupied office spaces with non-PCB transformers behind it.	No REC		NA	48
61W	15			Reconnaissance	•					Leased offices were not accessible during the Site reconnaissance.	No REC		NA	67
61W	16			Reconnaissance	•					Former Lab - The building material is concrete slab and block walls with roll up doors. Possible drain cleanout from the sink is outside of the building. Kitchen, cubicles, a sink, bathrooms, offices, storage cabinets, an N.D.T Lab sticker on the door window, and an equipment storage area. 61W-14 is connected to this building and contains unoccupied office spaces.	No REC		NA	46 to 48
61W	17A			SBCFD Records from 2005.					•	Hangar 5 - Hangar 5 was historically utilized to repair, overhaul, and clean jet engines and parts. Routine inspection records from the SBFD and DTSC in 2005 identified several violations. Photographs of the violations included oil spillage around a grinding machine and oil leakage around a machine in the Machine shop. Large pit in northwest corner of Hangar 5 containing floor drain.	It is GSI's experience that facilities utilized to repair and clean parts are often sources of contaminant release to the environment. Historical records have identified poor housekeeping with chemicals spilled to the ground surface. Historical use and documentation of release to the environment is considered a REC.		Hydrocarbons, VOCs, Metals	NA

TABLE 1
Site Features - Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Reconnaissance Conducted on October 20-22, 2021

Parcel	Map Feature Number	Within New Building Footprint?	Off-Site	Reference (Report, Interview, APs, or Recon)	ASTM Designation					Description	Explanation of REC	Potential for PEAS	Minimum Constituents of Potential Concern (COPC)	Photo Log Number
					Not an REC	de minimus	REC	CREC	HREC					
61W	17			2006 Hazardous Waste Generator and Materials Inspection Report--reference pit	•					Hangar 2 - Corrugated steel and brick construction material containing large air conditioner units. Inside: storage and is connected to the administration offices. Office furniture, overhead electrical, 5 nitrogen bottles on a trailer, TVs, towing port-a-potty, boxes, luggage, steel officer kiosk for terminals, boxes of files, electrical area, office supplies, a table, file cabinets, bath tissue pallets, 6 pallets of sanitizer, 3 water bottle pallets and copier machines. Southern part of the administration building contains vehicle parking, gym equipment, police offices with enclosures for police dogs, and a red cross storage area (bandages, water, gloves, hand sanitizer, bleach wipes). Northwest corner has a sunken pit (8 feet deep, 30x30 feet) with a drain in the southeast corner and a half court basketball court next to it. The pit historically contained a grinding machine.	No REC	NA	49 to 56	
61W	18			Reconnaissance	•					Building to the east of Hangar 2 (61W-17) constructed of painted corrugated steel. Two cars stored inside and it is otherwise vacant. Overhead electrical and small loft storage area.	No REC	NA	57	
61W	19			Reconnaissance	•					Shed with a broken hangar door constructed of painted corrugated steel. Inside there is an overhead crane system.	No REC	NA	58	
61W	20			Reconnaissance	•					Possible former cafeteria with office spaces. There is a large steel range hood, kitchen sink, old offices, and restrooms.	No REC	NA	59 to 60	
61W	21			AP, Reconnaissance	•					"Stop" is painted on the asphalt.	No REC	NA	61	
61W	22			Reconnaissance	•					Hangar 11 - Building is attached to Hangar 1. It has been included with location 61W-30 as attached building. The building currently contains a propane rack, fire sprinkler system, trash cans, planter bins, and luggage bags organized in a line (possibly for dogs to practice searching).	No REC	NA	76	
61W	22A			Reconnaissance	•					Old empty office spaces. The building is constructed out of concrete blocks. There is a "restricted area" room with false tile floor boards that could possibly be a former technician room.	No REC	NA	62 to 64	
61W	23			2003			•			Hazardous Waste Storage Building - Included in 61W-1	See 61W-1	Hydrocarbons, VOCs, Metals	27 to 30	
61W	24			2003			•			Maintenance/storage Shed - Included in 61W-1	See 61W-1	Hydrocarbons, VOCs, Metals	21 to 22	
61W	25			Reconnaissance	•					Parking lot. There is a drain inlet missing a lid, asphalt patches with utility lids on top, unknown asphalt patches, a sewer trench, an electrical trench, and a water trench.	No REC	NA	65 to 66	
61W	26			Mactec, 2006 (Figure 2)				•		Hazardous Waste Storage Area - Historical reports identified that this area was used for hazardous waste storage. There was no access to this area as it is leased (part of 61W-15). What appears to be a hazardous waste storage area was observed northwest of the building. This shed is covered and is constructed out of corrugated steel (painted).	A hazardous waste storage area was identified in historical reports, but was not observed during the Site Reconnaissance. It is GSI's experience that historical hazardous waste storage buildings often have stored damaged containers that release contaminants to the environment. Documented historical use of this area for hazardous waste storage is indicative of a release to the environment and is considered a REC.	Hydrocarbons, VOCs, Metals	68	
61W	27			Reconnaissance	•					The Site reconnaissance identified a trench drain located underneath a sloped concrete patch and awning.	No REC	NA	56	
61W	28			2006	•					Included in 61W-30A - four garages	No REC	NA	77 to 78	
61W	29			2005 and 2006 SBFD agency files.				•		Historical AST and Waste Treatment Area - This building is located northeast of Hangar 11 and feature 61W-28. Reportedly the location of former GE office space constructed of corrugated steel. No access during the Site reconnaissance. Secondary concrete enclosures were located to the north and east of the building where ASTs were formerly located. One of the enclosures is currently labeled "T23 containment area." Documents identify One 50,000-gallon rinse water storage tank, one 2,000-gallon H ₂ SO ₄ AST and one 3,000-gallon KCL. A 1995 inspection includes a drawing that identifies the ASTs and layout of the area. A sump was present within the building and waste was piped to a treatment and containment area. Waste types treated included waste water from the oil-water separator at the test-cell facility and waste water from tanks at the cleaning line and steam cleaning units located at the EHS department and at Hangar 11. The wastewater treatment system was removed in 2006. A temporary hazardous waste storage area is identified along the western outside wall of the building in a 1993 figure from Canonic Environmental included in SBFD records.	A historical AST and waste treatment area was identified in historical documents but the ASTs were not observed during the Site Reconnaissance. It is GSI's experience that historical ASTs and the associated waste treatment area could be a source of contaminant release to the environment. Documented historical use of this area for waste and the presence of a sump is indicative of a release to the environment and is considered a REC.	Metals, pH	69 to 70	

TABLE 1
Site Features - Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Reconnaissance Conducted on October 20-22, 2021

Parcel	Map Feature Number	Within New Building Footprint?	Off-Site	Reference (Report, Interview, APs, or Recon)	ASTM Designation					Description	Explanation of REC	Potential for PEAS	Minimum Constituents of Potential Concern (COPC)	Photo Log Number
					Not an REC	de minimus	REC	CREC	HREC					
61W	30			2005 and 2006 SBFD agency files			•			<p>Hangar 1 - Corrugated steel (painted) containing air conditioning units, and rolling track hangar doors retrofitted to rollup doors. Large leaking portable airplane hydraulic lifts located outside Hangar 1 and next to a large concrete pad (61W-36). Shed next to the hangar has a "no smoking" and fire extinguisher sign and a concrete perimeter slab containing a berm. Observed in the hangar are a water heater, overhead power and HVAC, a possible drainage sump with missing grates on top in the northeast corner, two long floor drains near the room with sump, electrical rooms, and a room containing an overhead crane in the northwest corner.</p> <p>An inspection report from SBFD from 5 October 2005 indicates that drums of used oil, waste fuel, oily rags, used oil filters, and used absorbent were present on the Site.</p> <p>An inspection report from SBFD from 6 October 2006 indicates the following: cleaning line room: dark purplish color staining from J-88 Cleaner (contains potassium permanganate); concrete beneath Versene cleaning tank (acid) had some corrosion; previous storage locations for T-20 and T-21 - permanganate staining. The report noted the following, "If the above structures are demolished, further action will not be required..." with regard to the observed October 2006 spills.</p>	This area has historically been used for hazardous waste storage, and evidence of release to the environment has been identified. A sump is present in the vicinity of the area of release. It is GSI's experience that historical sumps and drains often funnel waste and contaminants and release contaminants to the environment, and the presence of hydraulic oil leaking from equipment in the area is indicative of a release to the environment and is considered a REC.		Hydrocarbons, VOCs, Metals	71 to 76
61W	30			2005 SBFD records			•			<p>4 Garages North of Hangar 1 - The garages are constructed of corrugated steel containing rollup doors. An overhead crane was present. The garage contains floor drains and may be connected to a sump feature associated with Hangar 1 (61W-30). There appears to be a patch around center and western garage. Steam cleaning room: contained grit blast machine used to clean parts (waste collected in baghouses and stored), drum-rinsing area (waste water collected and pumped to T-23). Photographs of the steam cleaning room and drum rinsing area are included in a 2005 Hazardous Waste Generator and Hazardous Materials handler Inspection Report by SBFD and DTSC.</p>	It is GSI's experience that parts cleaning equipment and drum rinsing area and associated sump are indicative of a release to the environment and are considered a REC.		Hydrocarbons, VOCs, Metals	77 to 78
61W	30			Reconnaissance	•					<p>Ancillary buildings attached to the north side of Hangar 1 - No access was available to the inside of the buildings. Appear to be deteriorating and are made of wood and concrete. Drainage channel outside the rollup doors.</p>	No REC		NA	79 to 80
61W	31			Reconnaissance	•					Included in 61W-30 - Portable airplane hydraulic lifts outside of the hangar.	No REC		NA	72
61W	32			Reconnaissance	•					<p>Building 5 - Located in the northwestern corner of the Site. Four separate structures connect to each other inside. It is painted corrugated steel. Structure 1 and 2: This portion of the building is vacant.</p>	No REC		NA	81 to 88
61W	32			Reconnaissance	•					<p>Building 5 - Structure 3: Storage of aircraft tires, ladders, auxiliary power units, 2 diesel drums in secondary containers containing small volumes of liquid, waste coolant drum-partially filled in secondary container, file cabinets, office furniture, copiers and printers.</p>	No REC		NA	81 to 88
61W	32			Reconnaissance			•			<p>Building 5 - Structure 4: Batteries, scissor lifts, golf carts, a leaking aircraft cart, a power pack cart leaking oil, 3 totes of empty lubricant oil in the back of a golf cart, an anti-freeze container open with contents inside, file boxes, portable airplane hydraulic repair lifts, stands, welders, and aviation electronic equipment.</p>	The observed release to the environment of hazardous substances or petroleum products is a REC.		Hydrocarbons, VOCs, Metals	81 to 88
61W	32			Reconnaissance			•			<p>Building 5 - Outside storage area: A continuation of the inside contents. Trailers, portable airplane hydraulic repair lifts, ducting, crane lifts, airplane equipment, batteries, possible oil tank trailer, and Air Force portable air conditioner trailers with air compressors inside.</p>	The observed release to the environment of hazardous substances or petroleum products within Building 5, Structure 4 is a REC.		Hydrocarbons, VOCs, Metals	81 to 88
61W	33			Reconnaissance	•					Included in 61W-32 - outside storage area	No REC		NA	88
61W	34			Reconnaissance, EarthTech, 2005	•					Historical documentation identified the Site of a former clarifier and during the Site reconnaissance a concrete patch was identified. This area underwent soil vapor investigation by EarthTech in 2006 and no detectable concentrations of VOCs were identified at the time.	Soil vapor investigation did not identify any impact to the subsurface in the vicinity of the former clarifier.		NA	89 to 90
61W	35		•	Reconnaissance	•					ASIG Dirt Lease Area - Large gravel area with scattered shrubs adjacent to OIAA administration building/parking lot.	No REC		NA	91
61W	36			Reconnaissance	•					Included in 61W-30 - concrete pad outside of hangar	No REC		NA	62
61W	37			SBCFD Records from 1992.			•			<p>Historical USTs Historical documentation identifies this as the approximate historical location of USTs: -One (1) 8,000-gallon Stoddard solvent UST (UST 1) -One (1) 8,000-gallon Stoddard solvent UST (UST 2) with oil/water separator.</p>	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.		Hydrocarbons, VOCs, Metals	NA
61W	38			SBCFD Records from 1992.			•			<p>Historical USTs- Historical documentation identifies this as the approximate historical location of USTs: -One (1) 8,000-gallon calibration fluid UST (UST 3) -One (1) 3,000-gallon calibration fluid waste UST (UST 4)</p>	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.		Hydrocarbons, VOCs, Metals	NA
61W	39			SBCFD Records from 1992.			•			<p>Historical USTs- Historical documentation identifies this as the approximate historical location of USTs: -One (1) 6,000-gallon gasoline UST (UST 5) -One (1) 6,000-gallon diesel UST (UST 6) -One (1) 6,000-gallon diesel UST (UST 7)</p>	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.		Hydrocarbons, VOCs, Metals	NA

TABLE 1
Site Features - Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Reconnaissance Conducted on October 20-22, 2021

61W	40			SBCFD Records from 1992.			•			Historical USTs- Historical documentation identifies this as the approximate historical location of USTs: -One (1) 250-gallon calibration fluid waste UST (UST 8)	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and release contaminants to the environment.	Hydrocarbons, VOCs, Metals, pH	NA	
61W	41			SBCFD Records from 1992.			•			Historical USTs- Historical documentation identifies this as the approximate historical location of USTs: -One (1) 6,000-gallon calibration Fluid UST (UST 9) excavated and removed in 1992. -One (1) 2,000-gallon calibration fluid waste UST (UST 10)	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.	Hydrocarbons, VOCs, Metals, pH	NA	
61W	42 and 8			Same as 61W-8			•			Same as 61W-8	Same as 61W-8	Same as 61W-8	NA	
61W	43			SBCFD Records from 1992.			•			Historical USTs - Historical documentation identifies this as the approximate historical location of "Tank 12 and Tank 13 (removed)" was identified during this investigation. SBCFD records include "Figure 1" identifying "Underground Storage Tank Locations." Historical documentation identifies 14 USTs total in the area.	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.	Hydrocarbons, VOCs, Metals	NA	
61W	44			SBCFD Records from 1992.			•			Historical USTs- Historical documentation identifies this as the approximate historical location of "Tank 14 (removed)". No additional information was identified during this investigation,	Documentation of the removal and/or subsurface sampling in the vicinity of the USTs has not been identified. It is GSI's experience that subsurface USTs often leak and are indicative of a release to the environment. The historical presence of USTs with no closure documentation is a REC.	Hydrocarbons, VOCs, Metals	NA	
61S	1	•		Reconnaissance	•					Small surface patches that are possible boring holes.	No REC	NA	17	
61S	2	•		Reconnaissance	•					Storm drain with a concrete inlet 3-foot diameter. Northside is draining to a corrugated outlet on the southside.	No REC	NA	18	
61S	3	•		Reconnaissance	•					Circular concrete patch that tapers off to a straight edge. The westside of the concrete patch is overlaid with asphalt.	No REC	NA	19	
61C	1			AP, Reconnaissance	•					Painted "no aircraft parking" sign.	No REC	NA	1	
61C	2			AP, Reconnaissance	•					Unknown westside pad made of asphalt on the right side and concrete on the left side. Unknown 3x3 square lid north of 61C-1 and 61C-2.	No REC	NA	2	
61C	3			AP, Reconnaissance	•					Unknown asphalt pad with tie downs.	No REC	NA	3	
61C	4			AP, 2001 (pg. 10 and 139), Reconnaissance			•			Historical Clarifier with Wash Racks and Surface Staining - Concrete pad with former tracks for sliding doors to possibly a small former aircraft hangar. Drainage channel east of the concrete pad (possible former aircraft wash rack) containing red staining and the outline of ASTs. Nearby drain inlet may be connected to a former 3-stage clarifier to the south.	It is GSI's experience that clarifiers and wash racks are known to leak contents to the subsurface and impact the vadose zone with petroleum products. Additionally, red staining indicates that fire retardant was released to the environment from historical ASTs. An observed release to the environment and conditions indicative of a release to the environment are a REC.	Hydrocarbons, VOCs, Metals	4 to 6	
61C	5	•		Interview, AP, Reconnaissance	•					UPS storage pods and stacked pallets next to them on a concrete patch.	No REC	NA	7	
61C	6			Interview, AP, Reconnaissance	•					UPS storage pods.	No REC	NA	8	
61C	7	•		Reconnaissance	•					Steel lid utility vault east of the Guardian hangars.	No REC	NA	9	
61C	8	•		AP, Reconnaissance, CTL (2001; photograph on page 139)			•			Historical Clarifier- Possible former clarifier. A long trench appears to extend from a drain inlet that it may have been connected to.	It is GSI's experience that clarifiers are known to leak contents to the subsurface and impact the vadose zone with petroleum products or other waste. The former presence of the clarifier is indicative of a possible release to the environment and is a REC.	Hydrocarbons, VOCs, Metals, SVOCs	10	
61C	9	•		Interview, AP, Reconnaissance	•					Parking lot occupied by UPS. Parked trucks and trailers in the western portion of the parking lot, a sewer vault, power-General Telephone underground utility, a large asphalt patch in western portion, a trench in the ground that leads to a waterline at 61W-1, a drain inlet, and an unspecified utility vault. Secondary parking area to the east is a dirt/asphalt/gravel lot, with concrete patches, UPS trailers, cars, and a snow tire chain pile.	No REC	NA	11 to 16	
62	1	•		Interview, AP, Reconnaissance	•					Possible helicopter pad with a former 3'x3' drain inlet backfilled with asphalt.	No REC	NA	92	
62	2			AP, 2008; SBFD agency records (2002)			•			Clarifier- Historical documents and Site reconnaissance identified a four stage clarifier to the north of 62-8. SBFD records from 23 October 2002 indicate that the "sumps" were tested and "spill boxes - visual fail due to extreme rust and corrosion as per inspectors orders".	It is GSI's experience that clarifiers are known to leak contents to the subsurface and impact the vadose zone with petroleum products. Evidence of rust or corrosion to the clarifiers indicates that these may have released contaminants to the environment. The presence of a clarifier is indicative of a release to the environment and is a REC.	Hydrocarbons, VOCs, Metals, SVOCs, PFAS	93 to 95	

TABLE 1
Site Features - Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Reconnaissance Conducted on October 20-22, 2021

Parcel	Map Feature Number	Within New Building Footprint?	Off-Site	Reference (Report, Interview, APs, or Recon)	ASTM Designation					Description	Explanation of REC	Potential for PFAS	Minimum Constituents of Potential Concern (COPC)	Photo Log Number
					Not an REC	de minimus	REC	CREC	HREC					
62	3			AP, Reconnaissance	•					Asphalt patch with a sewer clean out and tie downs.	No REC		NA	96
62	3A			AP, Reconnaissance	•					Possible helicopter pad with a backfilled drain inlet (3x3 square) in the middle.	No REC		NA	97
62	4			AP, Reconnaissance	•					Two helicopter pads with the northern pad labeled "police only."	No REC		NA	98 to 99
62	5			Interview, AP, Reconnaissance			•			Guardian Jet Center East - Corrugated steel and stucco structure containing a concrete slab. Office space, a reception desk, restrooms, kitchen, and conference room are present within the northern portion of the hangar. Inside the hangar were a machine shop, Amazon aircraft pods, propane bottles, tools, air compressor, circuit breakers, a water heater, oil cans, and an IT room. Within the northwestern portion of the hangar and adjacent to the office space were an above ground AFFF-fire suppression tank and three, 250-gallon capacity Ansulite totes that contain AFFF. The west side of the hangar is office/tenant space and was inaccessible.	It is GSI's experience that AFFF Fire Suppression chemicals and equipment may release PFASs to the environment. The observation of fire suppression equipment is a condition indicative of a release to the environment and is a REC.	•	Hydrocarbons, PFAS, VOCs, Metals	100 to 104
62	6			Reconnaissance	•					Drain line between the Guardian Jet Center East and the southern Guardian Jet Center building	No REC		NA	201
62	7			Interview, AP, Reconnaissance	•					Possible helicopter pad with a former 3x3 drain inlet backfilled with asphalt.	No REC		NA	105
62	8	•		Reconnaissance, SCAQMD Records			•			Guardian Jet Center (southern building) - Corrugated steel structure, concrete slab, floor drains, overhead fire water lines connected to an AFFF fire suppression system, overhead electrical, and floor drains. The hangar is used for storage and maintenance. Other observations include a sand blast machine, six (6) oxygen tanks, four (4) oil drums (for waste and Jet-A), one (1) drum containing a gasoline label and one (1) drum containing an oil label - both partially filled. Used oil filters and absorbent pads present on the lid of the drums (not contained). Other features include a flammable container locker, grease guns, absorbent on the ground, a nitrogen tank, a jet oil cabinet with oil and filters, and a poly drum with unknown liquid is full. One AFFF fire suppression system above ground storage tank, a portable fire extinguisher, a motorized hangar doors, and 4-deep cycle batteries. The AFFF suppression tank contains a label indicating a construction date of 1988. Staining/residue present on the outside of the tank. Batteries contained inside a plastic box, a lavatory service cart, and shop sinks with household cleaners and a washing machine also were observed. One storage room was located upstairs containing computer equipment/parts, files, empty boxes, packaging, printers, office furniture, and aircraft tires. Fire suppression piping inside the upstairs room appears to have leaked from fittings onto plywood flooring. Office space is located along the west side of the hangar. The office spaces contain a restroom, a storage room, an IT room and empty storage room.	Unmarked drums, drums that were missing screw caps, used oil filters, general staining on the floor, and staining on the AFFF AST were observed at the Site. It is GSI's experience that AFFF Fire Suppression chemicals and equipment will release PFAS to the environment and generally poor housekeeping is a source of impact to the environment. The observation of fire suppression equipment as well as generally poor housekeeping in the vicinity of waste storage are conditions indicative of a release to the environment and considered a REC.	•	Hydrocarbons, PFAS, VOCs, Metals	106 to 116
62	9	•		AP, 2008; SBFD agency records (2002)			•			Clarifier - Historical documents and Site reconnaissance identified a four-stage clarifier to the south of 62-8. SBFD records from 23 October 2002 indicate that the "sumps" were tested and "spill boxies - visual fail due to extreme rust and corrosion as per inspectors orders".	It is GSI's experience that clarifiers are known to leak contents to the subsurface and impact the vadose zone with petroleum products. Evidence of rust or corrosion to the clarifiers indicates that these may have released contaminants to the environment. The presence of a clarifier is indicative of a release to the environment and is a REC.		Hydrocarbons, PFAS, VOCs, Metals	94
62	10	•		Reconnaissance	•					Transformer that did not appear to contain PCBs.	No REC		NA	202
62	11	•		AP, Reconnaissance	•					The Site reconnaissance did not identify anything notable at this location.	No REC		NA	202
62	12	•		Interview, AP, Reconnaissance	•					Western most UPS storage pods are on top of a concrete pad.	No REC		NA	117
62	13	•		1990, 2008, July 2018 Closure by SBFD based on 2013 closure report from Advanced GeoEnvironmental			•			Former Beechcraft West Fuel Farm where seven USTs were historically located - Currently a large gravel patch at the southern border of the UPS parking lot (62-15). Historical documents identify the former Beechcraft West fuel farm at the southern border of 2161 East Avion. The fuel farm contained seven USTs with a capacity of 88,000 gallons. The USTs were reported to have been removed in May 2013. Soil samples collected during the excavation were all non-detect except for the samples collected beneath UST T7. Hydrocarbon odors and stained soil were noted in the samples. The area under the UST was excavated to a depth of 21 feet with lateral dimensions of 10 feet by 7 feet, until stained soil was no longer visible. It was recommended that this former UST facility be closed. The former fuel farm was observed to be backfilled with gravel and soil during the Site Reconnaissance.	Some remaining impact appears to have been left below the area of UST T7. No closure documents were identified during this investigation. The removal of USTs without closure documentation and documented impact remaining in the subsurface beneath a former UST is a REC.		Hydrocarbons, VOCs	118
62	14			Reconnaissance	•					6x6 asphalt patch and three concrete patches. Tie downs and i-beams that have been cut off are also present.	No REC		NA	119
62	15	•		Reconnaissance	•					Parking lot full of UPS trucks and cars. There are at least 6 square concrete patches (3.5x3.5), multiple square asphalt patches, and other unknown patches. The southern and central area of the parking lot contains several large asphalt patches.	No REC		NA	120
62	16	•		Reconnaissance	•					The Guardian Air parking lot - adjacent to the Guardian Center hangars. Circular patch-possible storm drain, a transformer, a water valve system that can produce 250 pounds per square inch, a USA So Cal gas marker next to a covered asphalt patch, unknown asphalt patches, Atlas Air crew parking spaces.	No REC		NA	121 to 122

TABLE 1
Site Features - Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Reconnaissance Conducted on October 20-22, 2021

Parcel	Map Feature Number	Within New Building Footprint?	Off-Site	Reference (Report, Interview, APs, or Recon)	ASTM Designation					Description	Explanation of REC	Potential for PEAS	Minimum Constituents of Potential Concern (COPC)	Photo Log Number
					Not an REC	<i>de minimus</i>	REC	CREC	HREC					
63	1	•		Reconnaissance	•					Southern portion of vacant parking lot - Sewer vault, drainage channel (east to west) with inlet side to the west and outlet side to the east, precast vault (unknown utility), another drainage channel along the southside of the property followed by railroad tracks, and a So Cal gas company lid surrounded by an asphalt patch. There's access to a road that leads to the former GE facility test cell, south of the northern drainage channel.	No REC		NA	20, 123 to 124
67	1			Reconnaissance	•					Asphalt pad with no known use.	No REC		NA	125
67	2			Reconnaissance	•					Asphalt pad with no known use.	No REC		NA	126
67	3			Reconnaissance	•					Two vaults on a large concrete pad that we were not able to open.	No REC		NA	127
67	4			Interview, Reconnaissance	•					Drain inlet north of 67-3.	No REC		NA	128
67	5			CDM, 1990		•				Shooting Range - Historical documents identify that the area around Parcel 67 and 68 included a skeet shooting range in the mid-1940's.			Lead, metals	None
68	1			Interview, Reconnaissance	•					Drain inlet.	No REC		NA	129
68	2			Reconnaissance; CTL, 2001			•			Historical Clarifier and Wash Rack - A former wash rack containing a large concrete pad and former drain inlet were observed. The drain inlet appears to be backfilled and may have been connected to a former clarifier to the south.			Hydrocarbons, VOCs, Metals	130
68	3			Reconnaissance, AP	•					Concrete walkway along the eastern Site boundary. A drain inlet is located off-site btw Cucamonga Channel and the Site.	No REC		NA	131
68	4			Reconnaissance, AP	•					Large asphalt area that leads to the taxiway.	No REC		NA	132
68	5			Reconnaissance, AP	•					Asphalt patch.	No REC		NA	133
68	6			EI Capitan, 1995; CTL, 2001			•			Historical USTs - Two rectangular concrete pads separated by a gravel field were observed. The southern most patch is next to a panel labeled "control switch for north east floodlights is located at N.E. corner of fuel dump fence." A 1995 UST Closure Report (EI Capitan) indicates that the USTs were removed, and impacted soil was excavated and removed. Confirmation samples from the USTs and fueling pad area were collected and "no further action" was recommended for the former USTs. However, no documentation of regulatory closure of the UST area was identified during this investigation.	The USTs were closed and no further action was recommended. However, no documentation of regulatory closure of the UST area was identified during this investigation, so this area is considered a REC.		Hydrocarbons, VOCs, Metals	134 to 136
68	7				•				Historical USTs - The Site reconnaissance and historical documentation identifies a large gravel area near 68-6 which is a former UST area that has been backfilled. A 1995 UST Closure Report (EI Capitan) indicates that the USTs were removed, and impacted soil was excavated and removed. Confirmation samples from the USTs and fueling pad area were collected and "no further action" was recommended for the former USTs. However, no documentation of regulatory closure of the UST area was identified during this investigation.			Hydrocarbons, VOCs, Metals	137 to 138	
68	8			Reconnaissance, AP	•					Open area with light poles going down the center in a line. The electrical line may be buried beneath the soil.	No REC		NA	139
68	9			Reconnaissance, AP	•					Two concrete walkways that lead to doors along the eastern side of the National Guard hangar.	No REC		NA	140
68	10			Reconnaissance; CTL, 2001	•					Paint on the ground and square patches in straight line.	No REC		NA	141
68	11			Reconnaissance, AP	•					Unknown concrete patch with soil and flowers surrounding it, followed by an asphalt patch.	No REC		NA	142
68	12			Reconnaissance; Encorp, 1997; CTL, 2001			•			Historical Autoshop and Fire House - A former Autoshop (1997) and Fire House (2001) - The building is constructed of concrete (painted), containing a concrete floor slab.		•	PFAS, Hydrocarbons	143 to 144

TABLE 1
Site Features - Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Reconnaissance Conducted on October 20-22, 2021

Parcel	Map Feature Number	Within New Building Footprint?	Off-Site	Reference (Report, Interview, APs, or Recon)	ASTM Designation					Description	Explanation of REC	Potential for PEAS	Minimum Constituents of Potential Concern (COPC)	Photo Log Number
					Not an REC	<i>de minimus</i>	REC	CREC	HREC					
68	13			Reconnaissance, AP, Interview	•					Former National Guard Hangar - The building construction material is brick, pane glass, painted corrugated steel, and wood. This is a filming hangar last occupied by express jet in 2008 as a maintenance hangar. There is an asphalt patch in front of hangar that is a possible water line repair. Inside: circuit breakers, 4 office spaces, a hallway leading to outside, overhead power and lights, and fire extinguishers scattered across the walls. Older U-shaped building that surrounds newer hangar: The east side was a maintenance building and the west side of the hangar was an operations building. Both buildings are deteriorating with HVAC and ceiling on the ground in the upstairs portion of the maintenance building. The operations building contains the 196th commander office, LAPD offices, a driver's training office, and multiple other rooms.	No REC	NA	145 to 152	
68	14			Reconnaissance	•					No issues	No REC	NA	NA	
68	15			Reconnaissance; Encorp, 1997; CTL, 2001	•					Former National Guard Motorcycle Shop - Newer structure than 68-13. The building construction material is corrugated steel, glass, and a concrete foundation. Inside: overhead power and HVAC, drywall, a room with hardwood floors, and circuit breakers.	No REC	NA	153 to 154	
68	16			Reconnaissance	•					Ancillary Hangar Building - The building construction material is concrete slab, wood, and corrugated steel. A shop sink, palette and a half of insulation and a circuit breaker are inside the building.	No REC	NA	155 to 156	
68	17			Reconnaissance; Encorp, 1997			•			Boiler room - Construction materials appear to be brick exterior walls and a concrete floor slab. The boilers appear to have been constructed in 1952 (placard present). Other equipment/materials observed in the boiler room include a hot water tank, electrical main circuit breaker, air compressors, a water heater, and associated electrical panels and plumbing for the boilers. A waste oil drum (<55-gallon capacity) with a secondary containment drip pan is present. The drip pan appears to contain oil. An additional 55-gallon capacity drum (appears to be full) and 5-gallon capacity bucket (1/3 full) were present. A larger blue drum (approximately 85 gallons) is 1/4 full that is connected to an "ultrafilter" system.	An observed leaking waste drum located within a containment drip pan is representative of historical use and indicative of release to the environment and is a REC.	Hydrocarbons, VOCs, Metals, PCBs	157 to 161	
68	18			AP	•					Shed - The building construction material is brick, painted corrugated steel, glass panes, concrete, steel piping, concrete ceiling, overhead plumbing and electrical, and concrete slabbing. A hazardous placard #4 is located on the glass north of awning.	No REC	NA	162 to 164	
68	19			AP	•					Transformer in front of the boiler room labeled as "non-PCB". The transformer is labeled Sierra 150 and is a metal enclosed oil cut out. A tower with three more transformers is above.	No REC	NA	165 to 166	
68	20			EI Capitan, 1995; CTL, 2001			•			Historical USTs - A 1995 Report (EI Capitan, 1995 - Figure 3) indicates that one UST was removed from this area. However, a 2001 Phase I ESA (CTL Environmental Services) indicates that two USTs were located in this area and the second UST was not identified. A backfilled asphalt patch is located to the west of the boiler room. This is the location of a possible former diesel UST. A trench connects to this patch from 68-25. A 1995 UST Closure Report (EI Capitan) indicates that these USTs were removed, and impacted soil was excavated and removed. Confirmation samples were collected and "no further action" was recommended for the former USTs. However, no documentation of regulatory closure was identified during this investigation. In addition, a 2001 Phase I ESA indicates that a second UST was present in this area and was not accounted for during the removal of the USTs.	The USTs were closed and no further action was recommended. However, no documentation of regulatory closure of the UST area was identified during this investigation. In addition, a 2001 Phase I ESA indicates that a second UST was present in this area and was not accounted for during the removal of the USTs. The potential presence of a remaining UST as well as the lack of documented closure for the UST that was removed in this area is a REC.	Hydrocarbons, VOCs, Metals	167 to 168	
68	21			AP	•					Southern California Edison vault near 68-26.	No REC	NA	169	
68	22		•	1990	•					Off-Site National Guard yard - Old maintenance yard with stockpile bays full of sand and 14 scattered stockpiles of soil, boulders, cobbles, gravel, mixed, mulch, asphalt. Ground water monitoring well (approx. 6 inches in diameter), a trench between buildings 2 and 3, a transformer, and an unknown concrete pad with a power trench between buildings 2 and 3.	No REC	NA	170 to 179	
68	22-1			Reconnaissance			•			Historical Clarifier and Fuel ASTs - Building #1 contains block walls, HVAC system, a collapsed roof, deteriorated wood roof, and a concrete floor. There are five rooms within the building and a possible clarifier located south of the building.	It is GSI's experience that clarifiers are known to leak contents to the subsurface and impact the vadose zone with petroleum products or other waste. The former presence of the clarifier is indicative of a release to the environment and is a REC.	Hydrocarbons, VOCs, Metals	180 to 181, 203	
68	22-2			Reconnaissance	•					Building #2 is roughly the same as 68-22 building 1. The building is concrete slab, wood roof, and is also deteriorating. The building is a former mess hall with a kitchen, sinks, wash tubs, ovens, walk in refrigerator and pantry. There is a drain outside.	No REC	NA	182 to 183	
68	22-shed 1			Reconnaissance		•				Shed #1 - constructed of corrugated steel with flaking paint. Steel racks, a drum containing EA-200 (used to control algae/bacteria/fungi), 3 seat-mounted sweepers, and 2 above ground fuel tanks in secondary containers.	It is GSI's experience that historical fuel ASTs are a source of contaminant release to the environment. However, no leakage was observed in the secondary containment, and this area is considered to be <i>ade minimus</i> condition.	Hydrocarbons, VOCs, Oxy	186 to 188	
68	22-3			Reconnaissance	•					Building #3 - concrete with wood roof and beams, deteriorating. Two unknown concrete squares outside the front of the building. A possible maintenance garage with old lawn mower bags, a safety board, bags of fertilizer, and a work bench. Bee hive outside of the building by the east entrance.	No REC	NA	184 to 185, 204	

TABLE 1
Site Features - Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Reconnaissance Conducted on October 20-22, 2021

Parcel	Map Feature Number	Within New Building Footprint?	Off-Site	Reference (Report, Interview, APs, or Recon)	ASTM Designation					Description	Explanation of REC	Potential for PEAS	Minimum Constituents of Potential Concern (COPC)	Photo Log Number
					Not an REC	de minimis	REC	CREC	HREC					
68	22-shed 2			Reconnaissance	•					Shed #2 - painted corrugated steel that is flaking and is labeled state of CA maintenance shed. Inside: orange traffic barricades, an old air compressor line, and a "no smoking within 50 feet" sign.	No REC		NA	189
68	23		•	Reconnaissance	•					Off-Site former fuel farm was not visible. Observed a survey monument, a concrete stockpile, and a drainage channel.	No REC		NA	190 to 191
68	24			Reconnaissance	•					Rectangular back filled area with possible tie down for power.	No REC		NA	192
68	25			Reconnaissance	•					Water line to boiler room and water meters.	No REC		NA	193 to 194
68	26			Reconnaissance	•					Powerlines at the southwest corner of the former National Guard lease area.	No REC		NA	195
			•	Reconnaissance	•					Surrounding Properties - offsite to the east of CANG and Guardian hangars: Former vehicle maintenance area, UST 96' generator maintenance area, former rocket storage area (by the tower now), and fire station 10 that has a fuel tank and old plane full of holes from practicing putting out fires.	No REC		NA	196 to 200

Reference:
ASTM International, 2021, Designation E1527-21, Standard Practice for Environmental Site Assessment Process.

Definitions (from ASTM E1527-21)

Please reference the text of the Phase I ESA for any definitions that are not included below.

REC = recognized environmental conditions—(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

CREC = controlled recognized environmental condition—**recognized environmental condition** affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

HREC = historical recognized environmental condition—a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). **A historical recognized environmental condition is not a recognized environmental condition.**

de minimis condition = a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. **A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.**

PFAS = Per- and polyfluoroalkyl substances (PFASs). PFOA are persistent in the environment and resistant to typical environmental degradation processes. Fire-fighting foam contains PFAS and has been historically utilized at the Site.

Housekeeping = This term often pertains to the improper storage of hazardous materials which may result in impact to the subsurface.

NA = not applicable

APs = Aerial Photographs

Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail

RB Case No:	2081300	Stop Method:	
Local Case No:	36370024	CUF Case:	NO
Begin Date:	5/18/1990	Case Worker:	AK
File Location:	Regional Board		
Lead Agency:	SANTA ANA RWQCB (REGION 8)		
Local Agency:			
Potential COC:	Tetrachloroethylene (PCE), Trichloroethylene (TCE)		
Potential Media of Concern:	Aquifer used for drinking water supply		
How Discovered:	* GOV		
How Discovered Description:			
Stop Description:			
CalWater Watershed Name:	Santa Ana River - Middle Santa Ana River - Chino (Split) (801.21)		
DWR GW Subbasin Name:	Upper Santa Ana Valley - Chino (8-002.01)		
Disadvantaged Community:	Severely Disadvantaged Community		
CalEnviroScreen Score:	96-100% (highest scores)		
Site History:			

The Site has been operated by GE Engine Services as an aircraft engine facility since 1956. Chlorinated solvents were used in the 1950s and 1960s. In early 1970s, 1,1,1-TCE replaced TCE. From 1981 to 1996, isopropyl alcohol was the only solvent used at the facility. Prior to 1974, some waste water flowed to the wash area along the north side of the facility. In 1974, two dry wells were constructed (Area A & B). Some waste water were discharged to dry wells. From 1980 until 2006, waste water were treated at the Site. Site investigations were completed between 1985 and 1998. On-site and off-site ground investigations were performed between 1994 and 1998. Another phase of off-site GW investigation occurred in 2001 and 2002. Another phase is scheduled for 2009. GW plume extend approximately in southwesterly direction to Grove Ave. On-site soil remediation have been completed and GE is working with DTSC to complete the closure process in 2009.

City: RIVERSIDE

Cleanup Program Sites from GeoTracker Search - Regulatory Profile (as of May 29, 2021)

Project Status: OPEN - VERIFICATION MONITORING AS OF 2/5/2010
Cuf Claim No: OPEN - VERIFICATION MONITORING AS OF 2/5/2010
CUF Priority Assign: TETRACHLOROETHYLENE (PCE), TRICHLOROETHYLENE (TCE)
CUF Amount Paid: AQUIFER USED FOR DRINKING WATER SUPPLY
Composting Method: REGIONAL BOARD
File Location: REGIONAL BOARD
User Defined Beneficial Use: MUN, AGR, IND, PROC - Note: Also incl parts of 481.21 and 481.23 (R4).
Designated Beneficial Use: Municipal and Domestic Supply, Agricultural Supply, Industrial Service Supply, Industrial Process Supply - Note: Also incl parts of 481.21 and 481.23 (R4).
Designated Beneficial Use Desc: MUNICIPAL AND DOMESTIC SUPPLY, AGRICULTURAL SUPPLY, INDUSTRIAL SERVICE SUPPLY, INDUSTRIAL PROCESS SUPPLY - Note: Also incl parts of 481.21 and 481.23 (R4).

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code Details

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Past Use that Caused Contam:					AIRCRAFT MAINTENANCE, JET FUEL STORAGE/REFUELING	
Potential Media Affected:					OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR	
Potential Contaminant of Concern:						

CHROMIUM VI
 UNCATEGORIZED
 VOLATILE ORGANICS (8260B VOCS)

Site History:

General Electric has operated a jet engine test facility at this site from 1956 to the present. Both commercial and military engines are tested at the facility. About 6,000 gallons of hazardous waste were disposed of in dry wells. There was an estimated 600 cubic yards of waste and contaminated soil on the site. Results of a preliminary investigation in 1987, indicated the presence of 1,1,1-trichloroethane (TCA), tetrachloroethene (PCE), chloroform, naphthalene, 2-methylnaphthalene, and volatile aromatic (xylene, toluene, ethylbenzene) in soils near the dry wells. Hazardous substances disposed of in dry wells may potentially enter groundwater and contaminate drinking water supplies. Worker exposure concerns at the facility to volatile organic compounds if contaminated subsurface soils, are excavated or disturbed was raised. General Electric performed soil sampling in 1984, and 1987, to identify contaminated areas on the facility. General Electric has performed a site investigation to fully characterize the site. A Consent Order between General Electric and DHS was signed September 28, 1988, for both groundwater and soil remediation.

System operation of the vapor extraction treatment systems in areas A, B and C began on May 17, 1996. Quarterly reports on the status of operation have been submitted to DTSC since commencing remediation. Concentrations of VOCs in shallow soils in areas A, B, and C at the site have reached acceptable closure levels. The shallow extraction wells in areas A, B, and C will be maintained in operational condition until sufficient data can be obtained to evaluate rebound data.

In 2008, GE submitted the Second Five-Year Review Report recommending completion of the VOC remediation at both shallow and deep soils. On 10/24/2013, DTSC discussed this recommendation with RWQCB which recommended DTSC to hold the decision until the confirmation data are taken from soil vapor probes to assess whether VOCs are migrating from soil to groundwater.

At the RWQCB's request, GE prepared a work plan to install additional groundwater wells and soil vapor probes. The workplan approval is expected to be by the end of 2013. In February 2014, RWQCB informed DTSC that GE recently completed drilling and installation of a new multi-depth groundwater monitoring well, as well as an adjacent multi-depth vapor monitoring well. Both wells are located near the southern boundary of the site, close to where the original release of TCE occurred. The purpose of the groundwater well is to replace a previous well that had become dry, while the vapor well is to evaluate any remnant VOCs in the vadose zone that could be a continuing source for the groundwater contamination. Agencies to consider the information from the new vapor wells when making the remediation completion closure determination.

In April 2015, RWQCB concurred, in a phone conversation, that soil is no longer a source of the releases to groundwater. DTSC will proceed with a land use covenant (LUC) to complete the site soil vapor remediation. Groundwater monitoring continues under the RWQCB's oversight.

In April 2019, RWQCB contacted DTSC regarding the increasing trends of VOC observed in the offsite groundwater monitoring data. RWQCB may request additional soil/soil gas investigation for source evaluation. The project was transferred to SARWQCB on May 6, 2019 to minimize overlap of investigation between two agencies and expedite the environmental investigation and cleanup activities.

Document Type:					* CEQA	
Date Completed:					9/16/1994	
Comments:					The Department approved the final Remedial Action Plan for the General Electric Jet Engine Test Cell Facility. The CEQA (Negative Declaration) documents have also been approved. The remedial alternative recommended for the site consists of in situ soil vapor extraction to reduce VOC levels at the known source areas of the site. Groundwater investigation and cleanup will be under the oversight of the RWQCB.

Site History:

General Electric has operated a jet engine test facility at this site from 1956 to the present. Both commercial and military engines are tested at the

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

facility. About 6,000 gallons of hazardous waste were disposed of in dry wells. There was an estimated 600 cubic yards of waste and contaminated soil on the site. Results of a preliminary investigation in 1987, indicated the presence of 1,1,1-trichloroethane (TCA), tetrachloroethene (PCE), chloroform, naphthalene, 2-methylnaphthalene, and volatile aromatic (xylene, toluene, ethylbenzene) in soils near the dry wells. Hazardous substances disposed of in dry wells may potentially enter groundwater and contaminate drinking water supplies. Worker exposure concerns at the facility to volatile organic compounds if contaminated subsurface soils, are excavated or disturbed was raised. General Electric performed soil sampling in 1984, and 1987, to identify contaminated areas on the facility. General Electric has performed a site investigation to fully characterize the site. A Consent Order between General Electric and DHS was signed September 28, 1988, for both groundwater and soil remediation.

System operation of the vapor extraction treatment systems in areas A, B and C began on May 17, 1996. Quarterly reports on the status of operation have been submitted to DTSC since commencing remediation. Concentrations of VOCs in shallow soils in areas A, B, and C at the site have reached acceptable closure levels. The shallow extraction wells in areas A, B, and C will be maintained in operational condition until sufficient data can be obtained to evaluate rebound data.

In 2008, GE submitted the Second Five-Year Review Report recommending completion of the VOC remediation at both shallow and deep soils. On 10/24/2013, DTSC discussed this recommendation with RWQCB which recommended DTSC to hold the decision until the confirmation data are taken from soil vapor probes to assess whether VOCs are migrating from soil to groundwater.

At the RWQCB's request, GE prepared a work plan to install additional groundwater wells and soil vapor probes. The workplan approval is expected to be by the end of 2013. In February 2014, RWQCB informed DTSC that GE recently completed drilling and installation of a new multi-depth groundwater monitoring well, as well as an adjacent multi-depth vapor monitoring well. Both wells are located near the southern boundary of the site, close to where the original release of TCE occurred. The purpose of the groundwater well is to replace a previous well that had become dry, while the vapor well is to evaluate any remnant VOCs in the vadose zone that could be a continuing source for the groundwater contamination. Agencies to consider the information from the new vapor wells when making the remediation completion closure determination.

In April 2015, RWQCB concurred, in a phone conversation, that soil is no longer a source of the releases to groundwater. DTSC will proceed with a land use covenant (LUC) to complete the site soil vapor remediation. Groundwater monitoring continues under the RWQCB's oversight.

In April 2019, RWQCB contacted DTSC regarding the increasing trends of VOC observed in the offsite groundwater monitoring data. RWQCB may request additional soil/soil gas investigation for source evaluation. The project was transferred to SARWQCB on May 6, 2019 to minimize overlap of investigation between two agencies and expedite the environmental investigation and cleanup activities.

Preliminary Assessment Done: Facility is located in the Ontario International Airport. Test Area is 1/3-mile east along Avion. Operations consist of cleaning, overhauling, and testing of aircraft engines. In operation since 1956 (dry wells 1974-1980). Discharge to sewer. Preliminary Assessment submitted to U.S. EPA. DTSC approved the remedial design for the GE Company site. As part of a Cost Recovery Settlement between GE (the Responsible Party) and DTSC, for the period July 1, 1998 to June 30, 1997 for Invoice No. 13637, GE settled the disputed amount. DTSC received settlement payment pursuant to the settlement signed on 09/15/98 by GE and DTSC. DHS/TSCD Inspection: No violations found. O&M agreement being reviewed by OLC. Quarterly progress reports, weekly operation logs and O&M Manual have been submitted by GE. GE conducted soil gas sampling of deep and shallow soils in October 1999. There were some operational soil vapor extraction for rebound and closure data in areas A, B and C for shallow soils. The final closure decision will be based on an evaluation of rebound concentrations in shallow soil extraction wells over time. The remediation for deeper wells in each area will continue. The Pilot Test and deep soil monitoring protocol RAP implementation document was submitted to DTSC. Facility Identified: RWQCB files - aircraft parts mfg. SVE System was installed this month. Facility Drive-By: Active firm. Large, secured, paved complex. Reassessment was reviewed by Region 4 staff recommended AWP. Draft O&M Agreement sent to GE. DHS/HMMS Inspection: No violations found. Military and commercial jet engine testing facility. Contaminants include petroleum hydrocarbons, TCA, PCE, volatile and semi-volatile organic compounds, chloroform, naphthalene, 2-methylnaphthalene, and volatile aromatics (xylene, toluene, ethyl benzene). Core samples from two dry wells show 1,1,1-trichloroethane, TCE, PCE, and dibromochloroethane. Enforceable Agreement for Operation and Maintenance was signed by DTSC and GE. EPA submitted a reassessment recommending NFA. The Department approved the final Remedial Action Plan for the General Electric Jet Engine Test Cell Facility. The CEQA (Negative Declaration) documents have also been approved. The remedial alternative recommended for the site consists of in situ soil vapor extraction to reduce VOC levels at the known source areas of the site. Groundwater investigation and cleanup will be under the oversight of the RWQCB. RMDL: Installation, operation and maintenance of three (3) separate soil vapor extraction and treatment systems (VETS) was completed on 10/09/1996. In January 2001, DTSC issued conditional closure of the shallow soils in Areas A, B, and C. In October 4, 2001, DTSC supported closure of shallow soils at Areas A,B, and C and recommended cessation of deep soil vapor extraction operations in Area A. The VETS effluent concentration at Area A is being closely monitored. The VETS is being operated in accordance with the requirements of the Regional Water Quality Control Board (RWQCB). The individual VETS are being operated with the intent to operate deep soil VETS at each of the areas, A,B, and C until asymptotic conditions are achieved. It is recommended that there is resolution of two issues relating to the extent of deep soil VETS operation required at this site, which are: 1) A determination of the contamination specific clean up objectives for each of the five extraction wells in each VETS based on the distance from the screened interval of each individual well to groundwater; 2) An analysis of the relationship of contaminant levels in deep extraction wells to the level of contamination in groundwater and the proximity of the screened interval to groundwater.

Background:

General Electric has operated a jet engine test facility at this site from 1956 to the present. Both commercial and military engines are tested at the facility. About 6,000 gallons of hazardous waste were disposed of in dry wells. There is an estimated 600 cubic yards of waste and contaminated soil on the site. Results of a preliminary investigation in 1987, indicated the presence of 1,1,1-trichloroethane (TCA), tetrachloroethene (PCE), chloroform, naphthalene, 2-methylnaphthalene, and volatile aromatic (xylene, toluene, ethylbenzene) in soils near the dry wells. Hazardous substances disposed of in dry wells may potentially enter groundwater and contaminate drinking water supplies. The workers on the facility may be exposed to volatile organic compounds if contaminated subsurface soils, are excavated or disturbed. General Electric performed soil sampling in 1984, and 1987, to identify contaminated areas on the facility. General Electric has performed a site investigation to fully characterize the site. A Consent Order between General Electric and DHS was signed September 28, 1988, for both groundwater and soil remediation. System operation of the vapor extraction treatment systems in areas A, B and C began on May 17, 1996. Quarterly reports on the status of operation have been submitted to DTSC since commencing remediation. Concentrations of VOCs in shallow soils in areas A, B, and C at the site have reached acceptable closure levels. The shallow extraction wells in areas A, B, and C will be maintained in operational condition until sufficient data can be obtained to evaluate rebound data.

Location Longitude: -117.598644

Violation/Evaluation Summary

Note: NO RECORDS: As of Jun 2021, there are no Compliance Monitoring and Enforcement (violation) records associated with this facility (EPA ID).

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: No
Transfer Facility: No
Onsite Burner Exemption: No
Furnace Exemption: No
Underground Injection Activity: No
Commercial TSD: No
Used Oil Transporter: No

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
Used Oil Transfer Facility:		No				
Used Oil Processor:		No				
Used Oil Refiner:		No				
Used Oil Burner:		No				
Used Oil Market Burner:		No				
Used Oil Spec Marketer:		No				

Hazardous Waste Handler Details

Sequence No: 1
 Receive Date: 19960901
 Handler Name: USANG ONTARIO AIR NATIONAL GUARD STATION
 Federal Waste Generator Code: 2
 Generator Code Description: Small Quantity Generator
 Source Type: Implementer

Hazardous Waste Handler Details

Sequence No: 1
 Receive Date: 19990208
 Handler Name: USANG ONTARIO AIR NATIONAL GUARD STATION
 Federal Waste Generator Code: 1
 Generator Code Description: Large Quantity Generator
 Source Type: Notification

Waste Code Details

Hazardous Waste Code: D000
 Waste Code Description: DESCRIPTION

Hazardous Waste Code: D001
 Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D004
 Waste Code Description: ARSENIC

Hazardous Waste Code: D005
 Waste Code Description: BARIUM

Hazardous Waste Code: D008
 Waste Code Description: LEAD

Hazardous Waste Code: D009
 Waste Code Description: MERCURY

Hazardous Waste Code: F001
 Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
 Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
 Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F027
Waste Code Description: DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Site History:

Ontario Air National Guard Station (OANGS) is located in the City of Ontario south of Ontario Airport in San Bernardino County. The Station closed in September 1998 and is under the jurisdiction of the Air Force Base Conversion Agency. It is a formerly used defense (FUD) installation. RWQCB issued them a CAO to investigate the GW around 1989 and has been overseeing their SI activities. OANGS is an approximately 11 acre site that borders the southern boundary of the Ontario Airport. There are three Installation restoration Program Sites (SS-01, ST-02, and ST-03) and five area of concerns (AOCs). IRP Site SS-01, which covered the open space area between the maintenance shop (Bldg. 03) and shed (Bldg. 14) and the Cucamonga Creek channel has been approved closed by DTSC and RWQCB based on confirmation samples. IRP Site ST-02 and IRP Site ST-03 contained 3 underground storage tanks that were closed under the supervision of San Bernardino County. The five AOCs included the Septic Tank and Leach Field which were removed and disposed on 1999, two concrete Oil/Water Separators at Bldg. 06 and 14 removed in 1995, a wash rack at Bldg. 10 and a former Fire Training ARea were investigated in 1999 and found clean. Buildings 2, 6, 10, 14 and the Former Fire Training Area are located on OANGS. Building 2 is a Supply Warehouse that was constructed in 1949 and used as a supply shop. Building 6 was constructed in 1962; and was used for aerospace ground equipment maintenance and also as the generator maintenance shop. Hazardous wastes were stored at both facilities. Bldg 10 was a wash rack used to rinse dumpsters and Bldg 14 a vehicle parking shed. Current site conditions and analytical test data indicated that no further action is warranted at all IRP Sites and AOCs.

Document Type:		Preliminary Endangerment Assessment Report				
Date Completed:		12/13/1999				
Comments:		PEA - BLDGS: Site investigations were conducted at Buildings 10, 14 and at the Former Fire Training Area. Based on the sampling results, these sites are considered no further action sites. In addition, the removal actions at buildings 2 and 6 consisted of removing the 750 gallon tanks, associated leach field piping, contaminated soils, residual liquids, sludges, and other waste. The tanks were crushed in place, then hauled by ECI to their facility in Fontana, California for recycling. Based on the confirmation sampling conducted these two sites were clean-closed. The excavations were backfilled with imported clean fill and compacted.				
Title:		Reuse - Site Specific Environmental Baseline Survey

Document Type:		Environmental Baseline Survey				
Date Completed:		8/29/2000				
Comments:		FOST - 3.2055 acres: The purpose of this finding of Suitability to Terminate Lease (FOSTL) is to document the environmentally- related findings and suitability to release the Air Force from the current lease with the City of Los Angeles, Department of Airports (Lessor). The property will continue to be used as an aviation support area. ` SSEBS - 3.2055 acres: The purpose of this Supplemental Environmental Baseline Survey (SEBS) is to document the environmental findings as related to the storage, release or disposal of hazardous substances, and other environmental conditions over the area's history, in order to establish a baseline for use in making decisions concerning real property transactions. The Air Force will terminate the lease with the City of Los Angeles, Department of Airport. The property will continue to be used as an aviation support area.

Site History:

Ontario Air National Guard Station (OANGS) is located in the City of Ontario south of Ontario Airport in San Bernardino County. The Station closed in September 1998 and is under the jurisdiction of the Air Force Base Conversion Agency. It is a formerly used defense (FUD) installation. RWQCB issued them a CAO to investigate the GW around 1989 and has been overseeing their SI activities. OANGS is an approximately 11 acre site that borders the southern boundary of the Ontario Airport. There are three Installation restoration Program Sites (SS-01, ST-02, and ST-03) and five area of concerns (AOCs). IRP Site SS-01, which covered the open space area between the maintenance shop (Bldg. 03) and shed (Bldg. 14) and the Cucamonga Creek channel has been approved closed by DTSC and RWQCB based on confirmation samples. IRP Site ST-02 and IRP Site ST-03 contained 3 underground storage tanks that were closed under the supervision of San Bernardino County. The five AOCs included the Septic Tank and Leach Field which were removed and disposed on 1999, two concrete Oil/Water Separators at Bldg. 06 and 14 removed in 1995, a wash rack at Bldg. 10 and a former Fire Training Area were investigated in 1999 and found clean. Buildings 2, 6, 10, 14 and the Former Fire Training Area are located on OANGS. Building 2 is a Supply Warehouse that was constructed in 1949 and used as a supply shop. Building 6 was constructed in 1962; and was used for aerospace ground equipment maintenance and also as the generator maintenance shop. Hazardous wastes were stored at both facilities. Bldg 10 was a wash rack used to rinse dumpsters and Bldg 14 a vehicle parking shed. Current site conditions and analytical test data indicated that no further action is warranted at all IRP Sites and AOCs.

Violations

Violation Date:	09/22/2020	Violation Source:	CERS
Violation Program:	HMRP	Violation Division:	San Bernardino County Fire Department
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)		
Violation Notes:			

Returned to compliance on 10/16/2020. OBSERVATION: The CERS inventory submitted on 6/30/2020 was found to be incomplete. Hazardous materials and hazardous waste were observed on site above reporting thresholds that were not disclosed on the CERS inventory. It was also found that

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

the 2000 gallon diesel tank is no longer on site and can be removed from the plan inventory. CORRECTIVE ACTION: Submit an updated hazardous materials inventory in CERS.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date:	09/22/2020	Violation Source:	CERS
Violation Program:	HMRRP	Violation Division:	San Bernardino County Fire Department
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)		
Violation Notes:			

Returned to compliance on 10/16/2020. OBSERVATION: The site map that was submitted in the 2/28/2020 CERS submittal was rejected because it was incomplete. The following items must be indicated on the site map: north orientation, loading areas, adjacent streets, storm and sewer drains, access and exit points, utility emergency shutoff, evacuation staging areas, hazardous material handling and storage areas, and emergency response equipment. CORRECTIVE ACTION: Submit an accurate and complete site map into CERS.

Violation Description:

Failure to complete and electronically submit a site map with all required content.

Description of Events:	DURING TRANSIT THE STRAPS THE DRIVER HAD USED TO SECURE THE LOAD CAME LOOSE. THIS CAUSED 83 55-GALLON DRUMS OF MATERIAL THAT HE WAS HAULING TO SHIFT. THIS RESULTED IN THE HOOK AT THE END OF THE STRAP TO BECOME IMBEDDED INTO THE SIDE OF ONE DRUM NEAR ITS BOTTOM LIP. THE PUNCTURE RELEASE APPROXIMATELY 20 GALLONS OF PRODUCT TO LEAK ONTO THE FLOOR OF THE TRAILER. HAZPAK INC WAS CONTRACTED AND RESPONDED TO THE SPILL. THEY CLEANED THE LEAKED MATERIAL FROM THE TRAILER FLOOR AND OVERPACKED THE DAMAGED DRUM. THE DRIVER WILL RECEIVE ADDITIONAL INSTRUCTION ON BLOCKING AND BRACING.

El ID:	10053517	El Description:	Chemical Storage Facilities
El ID:	10053517	El Description:	Hazardous Waste Generator

Violations

Violation Date:	10/31/2016	Violation Source:	CERS
Violation Program:	HW	Violation Division:	San Bernardino County Fire Department
Citation:	HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple		
Violation Notes:			

Returned to compliance on 11/01/2016. Failure to retain Hazardous Waste Manifests for at least 3 years (CCR 66262.40(a)) Disposal records for 2016 not available for review.

Violation Description:

Hazardous Waste Generator Program - Administration/Documentation - General

Violations

Violation Date:	10/29/2019	Violation Source:	CERS
Violation Program:	HW	Violation Division:	San Bernardino County Fire Department
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)		
Violation Notes:			

Returned to compliance on 10/29/2019. OBSERVATION: At time of inspection, (1) 55 gallon drum of waste paint located in the wheel department area of facility was observed without a hazardous waste label. CORRECTIVE ACTION: Properly label all hazardous waste containers. This was corrected on site during time of inspection.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date:	10/31/2016	Violation Source:	CERS
Violation Program:	HMRRP	Violation Division:	San Bernardino County Fire Department
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)		
Violation Notes:			

Returned to compliance on 03/28/2017. Inventory observed not consistent with the hazardous materials inventory submitted to CERS.

Violation Description:

Failure to electronically update business plan within 30 days of any one of the following events:

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

A 100 percent or more increase in the quantity of a previously disclosed material.
 Any handling of a previously undisclosed hazardous materials at or above reportable quantities.
 A change of business address, business ownership, or business name.
 A substantial change in the handler's operations that requires modification to any portion of the business plan.

Violations

Violation Date: 10/29/2019 **Violation Source:** CERS
Violation Program: HW **Violation Division:** San Bernardino County Fire Department
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Notes:

Returned to compliance on 11/11/2019. OBSERVATION: At time of inspection, observed (2) 55 gallon drums of waste paint with accumulation start date of 2-18-2019 and (1) 55 gallon drum of waste paint with accumulation start date of 1-17-2019 in the hazardous waste storage area by paint mixing booth. Hazardous waste must be hauled off site for disposal within 180 days from accumulation start date. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

Violation Description:

- Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:
- (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.
 - (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).
 - (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violations

Violation Date: 10/29/2019 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** San Bernardino County Fire Department
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Notes:

OBSERVATION: At time of inspection, observed (5) 152 cubic feet cylinders of Helium/Argon gas, (23) 55 pound boxes of paint primer, (3) 251 cubic feet cylinders of oxygen and (5) 125 cubic feet cylinders of oxygen and approximately 1,600 gallons of propane on site. These quantities are over 100 percent more in quantity than quantity listed on hazardous materials inventory submitted via CERS on 8-7-2019. CORRECTIVE ACTION: Submit the updated business plan information via CERS within 30 days from this inspection date.

Violation Description:

- Failure to electronically update business plan within 30 days of any one of the following events:
 A 100 percent or more increase in the quantity of a previously disclosed material.
 Any handling of a previously undisclosed hazardous materials at or above reportable quantities.
 A change of business address, business ownership, or business name.
 A substantial change in the handler's operations that requires modification to any portion of the business plan.

TETRACHLOROETHYLENE (PCE)

Site History:

The subject property was agricultural land from 1938 to 1985. From 1988 to 2015 the property use involved industrial/manufacturing, including metal cutting, grinding, drilling, assembly, welding and additional metalwork operations. This site was identified as generating hazardous waste including liquids with lead, other organic solids, unspecified oil-containing waste, waste and mixed oil, hydrocarbon solvents and tetrachloroethene (PCE). Currently the property consists of a vacant concrete tilt-up building and parking lot. The surrounding land use is industrial/manufacturing.

Potential Media Affected: OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL
Site History:

The site is a test facility for commercial and military jet engines that has operated from 1956 to the present. About 6,000 gallons of hazardous waste were disposed of in dry wells. There is an estimated 600 cubic yards of waste and contaminated soil on the site. Results of a preliminary investigation in 1987 indicated the presence of 1,1,1-trichloroethane (TCA), tetrachloroethene (PCE), chloroform, naphthalene, 2-methylnaphthalene, and volatile aromatic (xylene, toluene, ethylbenzene) in soils near the dry wells. Hazardous substances disposed of in dry wells may potentially enter groundwater and contaminate drinking water supplies. The workers on the facility may be exposed to volatile organic compounds if contaminated subsurface soils are excavated or disturbed. General Electric performed preliminary assessment soil sampling in 1984 and 1987 to identify contaminated areas on the facility. A Consent Order between General Electric and DHS was signed September 28, 1988, for both groundwater and soil remediation. A Remedial Investigation / Feasibility Study was done in 1993 to fully characterize the site. DTSC approved the final Remedial Action Plan on September 16, 1994. System operation of the vapor extraction treatment systems in areas A, B and C began on May 17, 1996. An Enforceable Agreement for Operation and Maintenance was signed by DTSC and GE on August 28, 1998. Quarterly reports on the status of operation have been submitted to DTSC since commencing remediation. Concentrations of VOCs in shallow soils in areas A, B, and C at the site have reached acceptable closure levels. The shallow extraction wells in areas A, B, and C will be maintained in operational condition until sufficient data can be obtained to evaluate rebound data.

Potential Contaminant of Concern:

VOLATILE ORGANICS (8260B VOCS)

Status: INACTIVE - NEEDS EVALUATION

Site History:

FROM THE CORPS PUBLIC GIS SYSTEM: Property Description - The site comprised 875.49 acres in Ontario, California. The site encompasses all of the present airport property west of Archibald Avenue and sections south of Mission Blvd. between Grove and Turner Streets. The City of Ontario subsequently expanded the airport to the east to lengthen the runways and taxiways and named the airport Ontario International Airport. Over the years the City of Ontario leased portions of the airport to numerous companies for commercial and industrial purposes. Aerospace companies built, tested, overhauled, and refurbished aircraft within and adjacent to the airport. In 1985, the City of Ontario deeded title of the airport property to the City of Los Angeles, Department of Airports (LADA). From 1967 to 1985, the LADA operated and maintained the airport for the City of Ontario under an agreement. AAF improvements included maintenance and fueling facilities for aircraft and motor vehicles, taxiways and hardstands, subsistence, recreation, storage and operations buildings, utilities, and an ammo dump.

Property History - The airfield was a training site for Army Air Corps P-38 fighter pilots. In 1942, the U.S. took control of the airport and adjacent agricultural land. After 1945, the airport was returned to the city of Ontario and rededicated to civil aviation.

Site History:			

FROM THE CORPS PUBLIC GIS SYSTEM: Property Description - The former Ontario Air National Guard Training Site (ANGS) consisted of 30.62 acres leased to the U.S. Air Force by the City of Ontario and 7.93 acres fee owned by the U.S. Air Force and leased to the California Air National Guard (CANG). It is on 1280 S. Tower Drive, Ontario, California. The site is located along the south-central border of Ontario International Airport. In 1985, the city of Ontario conveyed the entire airport to the City of Los Angeles, Department of Airports (LADA). This ANG's was included in that conveyance. By supplemental agreement dated 11 May 1988, 27.41 acres were deleted from the lease between the Air Force and the City of Los Angeles, reducing the size of the ANG's. The Air Force still leases 3.21 acres from LADA and still owns 7.93 acres fee. This area is currently used by the CANG, 148th Combat Communications Squadron. This portion contains supply and administrative facilities and a motor pool, and is ineligible for consideration under DERP-FUDS. Since 1988, the eligible portion of the site has been leased to various tenants whom have used the hangar.

Property History - The site has been used as an airport and for Air National Guard training. The former Ontario Air National Guard Training Site is located on a small portion of the former Ontario Army Airfield (DERP Site No. J09CA053100). The U.S. Air Force acquired the site for the use of the California Air National Guard (CANG). The CANG used the site from 1949 to about 1980 for ANG flight training. The former ANG site was disposed of to the City of Los Angeles, Department of Airports (LADA) in 1988. LADA has leased this area to various tenants whom have used the hangar located on this site.

Potential Contamin of Concern:

Comments:			

Further investigation is anticipated this (96/97) fiscal yr. DTSC and The Gas Company signed a Consent Order providing for DTS oversight of a supplemental investigation and remediation of the site. Removal Action Workplan. Removal of 4700 cubic yards of PAH contaminated soil. Soil will be transported to a licensed treatment and disposal facility. Clean soil will be used to backfill and grade the site. REMOVAL ACTION and CERT: Removal of 17,000 cubic yards of PAH contaminated soil. Soil was transported to a licensed treatment and disposal facility. clean soil will be used to backfill and grade the site. Transition to Chapter 6.5 - Amendment to the existing Voluntary Cleanup Agreement, Docket No. 96/97-020 signed by the RP. A Removal Action Work Plan for Operable Unit 2 was approved by DTSC. Removal Action field work OUZ completed. DTSC independently sampled property of concerned occupant and owner at 628 Maitland Street. The property is located adjacent to 624 Maitland Street from which 50 cy of PAH contaminated was removed. PAH-contaminated soil was removed from 3 adjacent residential properties located at 608, 614, & 624 Maitland Street. These properties are located across the street from the main site. Contamination has been remediated to background levels.

Background:

Former MGP operated from 1909 to 1917. The site is now utilized as an unmanned natural gas meter and regulator station. The PEA report submitted in June 1993 revealed site soil impacted with a black tarred material, PAH's and TPH. The PEA recommends fencing the site and removal of some soil. Further characterization of the lateral and vertical extent of contamination and a baseline HRA is required.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program:

DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Jun 25, 2021

National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Jun 25, 2021

Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Jun 25, 2021

SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Mar 23, 2021

Inventory of Open Dumps, June 1985:

ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites:

[SEMS ARCHIVE](#)

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: May 25, 2021

Comprehensive Environmental Response, Compensation and Liability Information System -

[CERCLIS](#)

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:

[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:

[RCRA CORRACTS](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jun 14, 2021

RCRA non-CORRACTS TSD Facilities:

[RCRA TSD](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Jun 14, 2021

RCRA Generator List:

[RCRA LQG](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jun 14, 2021

RCRA Small Quantity Generators List:

[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jun 14, 2021

RCRA Very Small Quantity Generators List:

[RCRA VSQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jun 14, 2021

RCRA Non-Generators:

[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jun 14, 2021

Federal Engineering Controls-ECs:

[FED ENG](#)

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 23, 2021

Federal Institutional Controls- ICs:

[FED INST](#)

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Feb 23, 2021

Land Use Control Information System:

[LUCIS](#)

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Emergency Response Notification System:

[ERNS 1982 TO 1986](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System:

[ERNS 1987 TO 1989](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System:

[ERNS](#)

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Jul 26, 2021

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:

[FED BROWNFIELDS](#)

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Aug 20, 2021

FEMA Underground Storage Tank Listing:

[FEMA UST](#)

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan:

[FRP](#)

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 2, 2020

Historical Gas Stations:

[HIST GAS STATIONS](#)

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries:

[REFN](#)

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Jul 10, 2020

Petroleum Product and Crude Oil Rail Terminals:

[BULK TERMINAL](#)

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Apr 28, 2020

LIEN on Property:

[SEMS LIEN](#)

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: May 25, 2021

Superfund Decision Documents:

[SUPERFUND ROD](#)

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Jun 28, 2021

State

State Response Sites:

[RESPONSE](#)

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Jun 14, 2021

EnviroStor Database:

[ENVIROSTOR](#)

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Jun 14, 2021

Delisted State Response Sites:

[DELISTED ENVS](#)

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Jun 14, 2021

Solid Waste Information System (SWIS):

[SWF/LF](#)

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Jul 20, 2021

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels:

[SWRCB SWF](#)

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

EnviroStor Hazardous Waste Facilities:

[HWP](#)

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Jun 14, 2021

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report:

[SWAT](#)

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Construction and Demolition Debris Recyclers:

[C&D DEBRIS RECY](#)

This listing of Construction and Demolition Debris Recyclers is maintained by the California Intergrated Waste Management Board-common C&D materials include lumber, drywall, metals, masonry (brick, concrete, etc.), carpet, plastic, pipe, rocks, dirt, paper, cardboard, or green waste related to land development.

Government Publication Date: Jun 20, 2018

Recycling Centers:

[RECYCLING](#)

This list of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Nov 2, 2020

Listing of Certified Processors:

[PROCESSORS](#)

This list of Certified Processors that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Oct 27, 2020

Listing of Certified Dropoff, Collection, and Community Service Programs:

[CONTAINER RECY](#)

This list of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Dec 16, 2020

Land Disposal Sites:

[LDS](#)

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Jun 22, 2021

Leaking Underground Fuel Tank Reports:

LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Jun 22, 2021

Delisted Leaking Storage Tanks:

DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Jun 22, 2021

Permitted Underground Storage Tank (UST) in GeoTracker:

UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Jul 25, 2021

Proposed Closure of Underground Storage Tank Cases:

UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: May 5, 2021

Historical Hazardous Substance Storage Information Database:

HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Statewide Environmental Evaluation and Planning System:

UST SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) is a historical listing of active and inactive underground storage tanks made available by the California State Water Resources Control Board (SWRCB).

Government Publication Date: Oct 1, 1994

Aboveground Storage Tanks:

AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

SWRCB Historical Aboveground Storage Tanks:

AST SWRCB

A list of aboveground storage tanks made available by the California State Water Resources Control Board (SWRCB). Effective January 1, 2008, the Certified Unified Program Agencies (CUPAs) are vested with the responsibility and authority to implement the Aboveground Petroleum Storage Act (APSA).

Government Publication Date: Dec 1, 2007

Oil and Gas Facility Tanks:

TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Jun 28, 2021

Delisted Storage Tanks:

DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Jul 25, 2021

California Environmental Reporting System (CERS) Tanks:

CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Apr 29, 2021

Delisted California Environmental Reporting System (CERS) Tanks:

DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Apr 29, 2021

Historical Hazardous Substance Storage Container Information - Facility Summary:

HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in the 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions:

LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Jun 14, 2021

CALSITES Database:

CALSITES

This historical database was maintained by the Department of Toxic Substance Control (DTSC) for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

Government Publication Date: May 1, 2004

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions:

HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Feb 18, 2021

Deed Restrictions and Land Use Restrictions:

DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Jun 22, 2021

Voluntary Cleanup Program:

VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Jun 14, 2021

GeoTracker Cleanup Program Sites:

CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Jun 22, 2021

Delisted County Records:

DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands:
LUSTs on Tribal/Indian Lands in Region 9, which includes California.
Government Publication Date: Apr 8, 2020

[INDIAN LUST](#)

Underground Storage Tanks (USTs) on Indian Lands:
USTs on Tribal/Indian Lands in Region 9, which includes California.
Government Publication Date: Apr 8, 2020

[INDIAN UST](#)

Delisted Tribal Leaking Storage Tanks:
Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.
Government Publication Date: Apr 14, 2020

[DELISTED ILST](#)

Delisted Tribal Underground Storage Tanks:
Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.
Government Publication Date: Apr 14, 2020

[DELISTED IUST](#)

County

San Bernardino County - CUPA List:
A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Bernardino County. This list is made available by San Bernardino County Fire Department which is the CUPA for all areas of the County except the city of Victorville.
Government Publication Date: May 28, 2021

[SANBERN CUPA](#)

Additional Environmental Record Sources

Federal

PFOA/PFOS Contaminated Sites:
List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).
Government Publication Date: Mar 1, 2021

[PFAS NPL](#)

Facility Registry Service/Facility Index:
The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).
Government Publication Date: Nov 2, 2020

[FINDS/FRS](#)

Toxics Release Inventory (TRI) Program:
The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.
Government Publication Date: Feb 19, 2020

[TRIS](#)

Perfluorinated Alkyl Substances (PFAS) Releases:

[PFAS TRI](#)

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Water Quality:

[PFAS WATER](#)

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

Hazardous Materials Information Reporting System:

[HMIRS](#)

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs:

[NCDL](#)

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Oct 5, 2020

Toxic Substances Control Act:

[TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA:

[HIST TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

[FTTS ADMIN](#)

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing:

[FTTS INSP](#)

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:

[PRP](#)

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Jun 25, 2021

State Coalition for Remediation of Drycleaners Listing:

[SCRD DRYCLEANER](#)

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):

[ICIS](#)

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Jun 14, 2021

Drycleaner Facilities:

[FED DRYCLEANERS](#)

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: May 5, 2021

Delisted Drycleaner Facilities:

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: May 5, 2021

Formerly Used Defense Sites:

[FUDS](#)

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: May 26, 2021

Former Military Nike Missile Sites:

[FORMER NIKE](#)

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents:

[PIPELINE INCIDENT](#)

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS):

[MLTS](#)

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites:

[HIST MLTS](#)

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Nov 3, 2020

Surface Mining Control and Reclamation Act Sites:

SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Dec 18, 2020

Mineral Resource Data System:

MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2006

Uranium Mill Tailings Radiation Control Act Sites:

URANIUM

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

Government Publication Date: Mar 4, 2017

Alternative Fueling Stations:

ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Jul 12, 2021

Registered Pesticide Establishments:

SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Apr 13, 2021

Polychlorinated Biphenyl (PCB) Notifiers:

PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 19, 2020

State

Dry Cleaning Facilities:

DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Feb 22, 2021

Delisted Drycleaners:

[DELISTED DRYCLEANERS](#)

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Feb 22, 2021

Non-Toxic Dry Cleaning Incentive Program:

[DRYC GRANT](#)

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2018

Per- and Polyfluoroalkyl Substances (PFAS):

[PFAS](#)

List of sites from the State Water Resources Control Board (SWRCB)'s GeoTracker at which one or more of the potential contaminants of concern are in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Jun 22, 2021

PFOA/PFOS Groundwater:

[PFAS GW](#)

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Oct 22, 2020

Hazardous Waste and Substances Site List - Site Cleanup:

[HWSS CLEANUP](#)

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: May 20, 2021

List of Hazardous Waste Facilities Subject to Corrective Action:

[DTSC HWF](#)

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement:

[INSP COMP ENF](#)

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Apr 29, 2021

School Property Evaluation Program Sites:

[SCH](#)

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Jun 14, 2021

California Hazardous Material Incident Report System (CHMIRS):

[CHMIRS](#)

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 21, 2021

Historical California Hazardous Material Incident Report System (CHMIRS):

[HIST CHMIRS](#)

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Hazardous Waste Manifest Data:

[HAZNET](#)

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Oct 24, 2016

Historical Hazardous Waste Manifest Data:

[HIST MANIFEST](#)

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

DTSC Registered Hazardous Waste Transporters:

[HW TRANSPORT](#)

The California Department of Toxic Substances Control (DTSC) maintains this list of Registered Hazardous Waste Transporters.

Government Publication Date: Oct 19, 2020

Registered Waste Tire Haulers:

[WASTE TIRE](#)

This list of registered waste tire haulers is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Dec 16, 2020

California Medical Waste Management Program Facility List:

[MEDICAL WASTE](#)

This list of Medical Waste Management Program Facilities is maintained by the California Department of Public Health. The Medical Waste Management Program (MWMP) regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations. This list contains transporters, treatment, and transfer facilities.

Government Publication Date: Dec 31, 2020

Historical Cortese List:

[HIST CORTESE](#)

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders:

[CDO/CAO](#)

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

California Environmental Reporting System (CERS) Hazardous Waste Sites:

[CERS HAZ](#)

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Feb 9, 2021

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites:

[DELISTED HAZ](#)

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker:

[GEOTRACKER](#)

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Jun 22, 2021

Mines Listing:

MINE

This list includes mine site locations extracted from the Mines Online database, maintained by the California Department of Conservation. Mines Online (MOL) is an interactive web map designed with GIS features that provide information such as the mine name, mine status, commodity sold, location, and other mine specific data. Please note: Mine location information is provided to assist experts in determining the location of mine operators in accordance with California Civil Code section 1103.4 and reflects information reported by mine operators in annual reports provided under Public Resources Code section 2207. While the Division of Mine Reclamation (DMR) attempts to populate MOL with accurate location information, the DMR cannot guarantee the accuracy of operator reported location information.

Government Publication Date: Jan 12, 2021

Recorded Environmental Cleanup Liens:

LIEN

The California Department of Toxic Substance Control (DTSC) maintains this list of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

Government Publication Date: Nov 16, 2020

Waste Discharge Requirements:

WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Jun 22, 2021

Toxic Pollutant Emissions Facilities:

EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2019

Clandestine Drug Lab Sites:

CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/ clandestine drug laboratories.

Government Publication Date: Jan 19, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

San Bernardino County - Medical Waste Facility List:

MED WST SANBERN

This list of San Bernardino County medical waste facilities is maintained by the County of San Bernardino Department of Public Health Medical Waste Program. The Medical Waste Program regulates generators of medical waste based on the Medical Waste Management Act. The program inspects medical waste facilities, facilities with on-site medical waste treatment units, and common storage areas annually. This program also investigates complaints regarding mishandling of medical waste and facilities that may be operating without a valid health permit. Some facilities that may generate medical waste include hospitals, skilled nursing facilities, blood banks, and doctors, dental and veterinarian offices.

Government Publication Date: Dec 22, 2020

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Property Information

Order Number:	21083000634p
Date Completed:	August 30, 2021
Project Number:	5925

Detail Report.....	28
Radon Information.....	49
Appendix.....	50
Liability Notice.....	52

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Geologic Information

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Q

Unit Name:	Quaternary alluvium and marine deposits
Unit Age:	Pliocene to Holocene
Primary Rock Type:	alluvium
Secondary Rock Type:	terrace
Unit Description:	Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine, but includes marine deposits near the coast.

Soil Information

SSURGO Soils

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit Db (40.01%)

Map Unit Name:	Delhi fine sand
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Somewhat excessively drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Delhi(85%)	
horizon H1(0cm to 46cm)	Fine sand
horizon H2(46cm to 152cm)	Sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Db - Delhi fine sand

Component: Delhi (85%)

The Delhi component makes up 85 percent of the map unit. Slopes are 0 to 2 percent. This component is on alluvial fans. The parent material consists of sandy alluvium derived from granite. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat excessively drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 3e. This soil does not meet hydric criteria.

Component: Unnamed (5%)

Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Component: Unnamed (5%)

Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Component: Tujunga (5%)

Generated brief soil descriptions are created for major soil components. The Tujunga soil is a minor component.

Map Unit HaC (0.12%)

Map Unit Name:	Hanford coarse sandy loam, 2 to 9 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Hanford(85%)	
horizon H1(0cm to 30cm)	Sandy loam
horizon H2(30cm to 152cm)	Coarse sandy loam
horizon H2(30cm to 152cm)	Fine sandy loam
horizon H2(30cm to 152cm)	Sandy loam

Component Description:

Soil Information

Minor map unit components are excluded from this report.

Map Unit: HaC - Hanford coarse sandy loam, 2 to 9 percent slopes

Component: Hanford (85%)

The Hanford component makes up 85 percent of the map unit. Slopes are 2 to 9 percent. This component is on alluvial fans. The parent material consists of alluvium derived from granite. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 2e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

Component: Greenfield (10%)

Generated brief soil descriptions are created for major soil components. The Greenfield soil is a minor component.

Component: Tujunga (5%)

Generated brief soil descriptions are created for major soil components. The Tujunga soil is a minor component.

Map Unit Hr (0.04%)

Map Unit Name:	Hilmar loamy fine sand
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Hilmar(85%)

horizon A(0cm to 33cm)	Loamy fine sand
horizon C1(33cm to 41cm)	Loamy sand
horizon C2(41cm to 58cm)	Loamy sand
horizon 2C3(58cm to 152cm)	Stratified loamy sand to loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Hr - Hilmar loamy fine sand

Component: Hilmar (85%)

The Hilmar component makes up 85 percent of the map unit. Slopes are 0 to 2 percent. This component is on alluvial fans, alluvial plains. The parent material consists of alluvium derived from granite. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 4w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. The soil has a slightly saline horizon within 30 inches of the soil surface.

Component: Delhi (10%)

Generated brief soil descriptions are created for major soil components. The Delhi soil is a minor component.

Component: Tujunga (5%)

Generated brief soil descriptions are created for major soil components. The Tujunga soil is a minor component.

Map Unit TuB (59.83%)

Map Unit Name:	Tujunga loamy sand, 0 to 5 percent slopes
----------------	---

Soil Information

Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Somewhat excessively drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Tujunga(85%)

horizon A(0cm to 15cm)	Loamy sand
horizon C1(15cm to 46cm)	Loamy sand
horizon C2(46cm to 152cm)	Loamy sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: TuB - Tujunga loamy sand, 0 to 5 percent slopes

Component: Tujunga (85%)

The Tujunga, loamy sand component makes up 85 percent of the map unit. Slopes are 0 to 5 percent. This component is on alluvial fans, alluvial plains. The parent material consists of alluvium derived from granite. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat excessively drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria.

Component: Tujunga (10%)

Generated brief soil descriptions are created for major soil components. The Tujunga soil is a minor component.

Component: Hanford (5%)

Generated brief soil descriptions are created for major soil components. The Hanford soil is a minor component.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *SAN BERNARDINO* County: **2**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L

Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L

Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *SAN BERNARDINO* County

No Measures/Homes:	17
Geometric Mean:	0.5
Arithmetic Mean:	0.7
Median:	0.7
Standard Deviation:	1
Maximum:	2.9
% >4 pCi/L:	0
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of California conducted during 1989-90. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Federal Sources

FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data

US WETLAND

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System

FED USGS

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

Oil and Gas Wells

OGW

A list of Oil and Gas well locations. This is provided by California's Department of Conservation Division of

Appendix

Oil, Gas and Geothermal Resources.

Periodic Groundwater Level Measurement Locations

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

MONITOR WELLS

Well Completion Reports

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.

WATER WELLS

RE: CITY DIRECTORY RESEARCH
Ontario Airport
Ontario Airport Ontario, CA

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

All of East Avion
Beg-2000 of South Vineyard Avenue

1.0 - INTRODUCTION

The Department of Airports (DOA) authorized Camp Dresser & McKee Inc. (CDM) to conduct Phase I and Phase II Environmental Assessments of four vacant parcels located on the south side of Ontario International Airport. Phase I Environmental Assessment activities were conducted in July and August of 1990. The findings of Phase I assessments are presented in this report.

Recommendations for Phase II activities are included in Section 2.8.2.

2.0 - PHASE I ENVIRONMENTAL ASSESSMENT

2.1 GEOGRAPHICAL SETTING

This section will discuss the geographic setting of the area, which includes location, climate, physiography, hydrogeology, and groundwater quality.

2.1.1 LOCATION

Ontario International Airport (ONT) is a 1,463-acre parcel of land located in the southwestern corner of San Bernardino County, within the corporate boundaries of the city of Ontario, California. The facility lies near the center of the Pomona Valley and Chino Basin. It is surrounded by the communities of Rancho Cucamonga and Upland to the north, Fontana and San Bernardino to the east, Riverside to the southeast, Corona and Chino to the south, and Pomona and Montclair to the west.

2.1.2 CLIMATE

The climate of the Chino Basin is temperate, characterized by warm temperatures, low precipitation, and mild winters. The character of the climate of the Chino Basin is intermediate between the mild marine climate typical of coastal southern California and the climate of the inland deserts. Annual temperatures in the region average approximately 62°F with summer temperatures averaging 75°F and winter temperatures averaging 51°F.

Extremes in temperatures from 20°F during winter months to over 100°F during summer have been recorded. Precipitation varies widely within the region, averaging from 13 to 25 inches per year. Near ONT, an annual precipitation rate of approximately 15 inches can be expected.

Over 85 percent of the annual rainfall occurs between the months of December and April with typically less than 2 percent occurring during the summer months. Winds in the region are highly variable in their intensity with prevailing winds averaging 5 to 15 mph. Storms or other meteorological conditions, including "Santa Ana" conditions occasionally cause strong winds to blow from the desert through the Cajon Pass to the southwest. These winds can gust to over 80 mph and reduce relative humidity to less than 10%.

2.1.3 PHYSIOGRAPHY

The Chino Basin is a structural depression surrounded by the San Gabriel Mountains, San Bernardino Mountains, Santa Ana Mountains and the Puente Hills, which have been uplifted and eroded. The depression has been filled with materials eroded from the surrounding mountain ranges. Several faults, including the San Andreas, Chino, Whittier, and Colton-Rialto, pass through or near the area.

The valley floor of the Chino Basin is a broad, smooth plain which is flat along an east-west transect and slopes from the San Gabriel Mountains on the north to the Santa Ana River on the south, at an average of 1 to 2 percent. Surficial features which bound the basin include the San Gabriel Mountains, which rise to 10,064 feet above MSL to the north, the Chino Hills and Santa Ana Mountains which rise to 1,781 and 5,687 feet above MSL to the west, the Jurupa Mountains which rise to 2,000 feet above MSL and the Pedley Hills rising to 1,300 feet above MSL to the south. The approximate elevation of ONT is 940 feet above MSL.

2.1.4 HYDROGEOLOGY

ONT overlies the Chino Groundwater Basin which consists of about 220 square miles of Upper Santa Ana River watershed. The basin is bounded by several

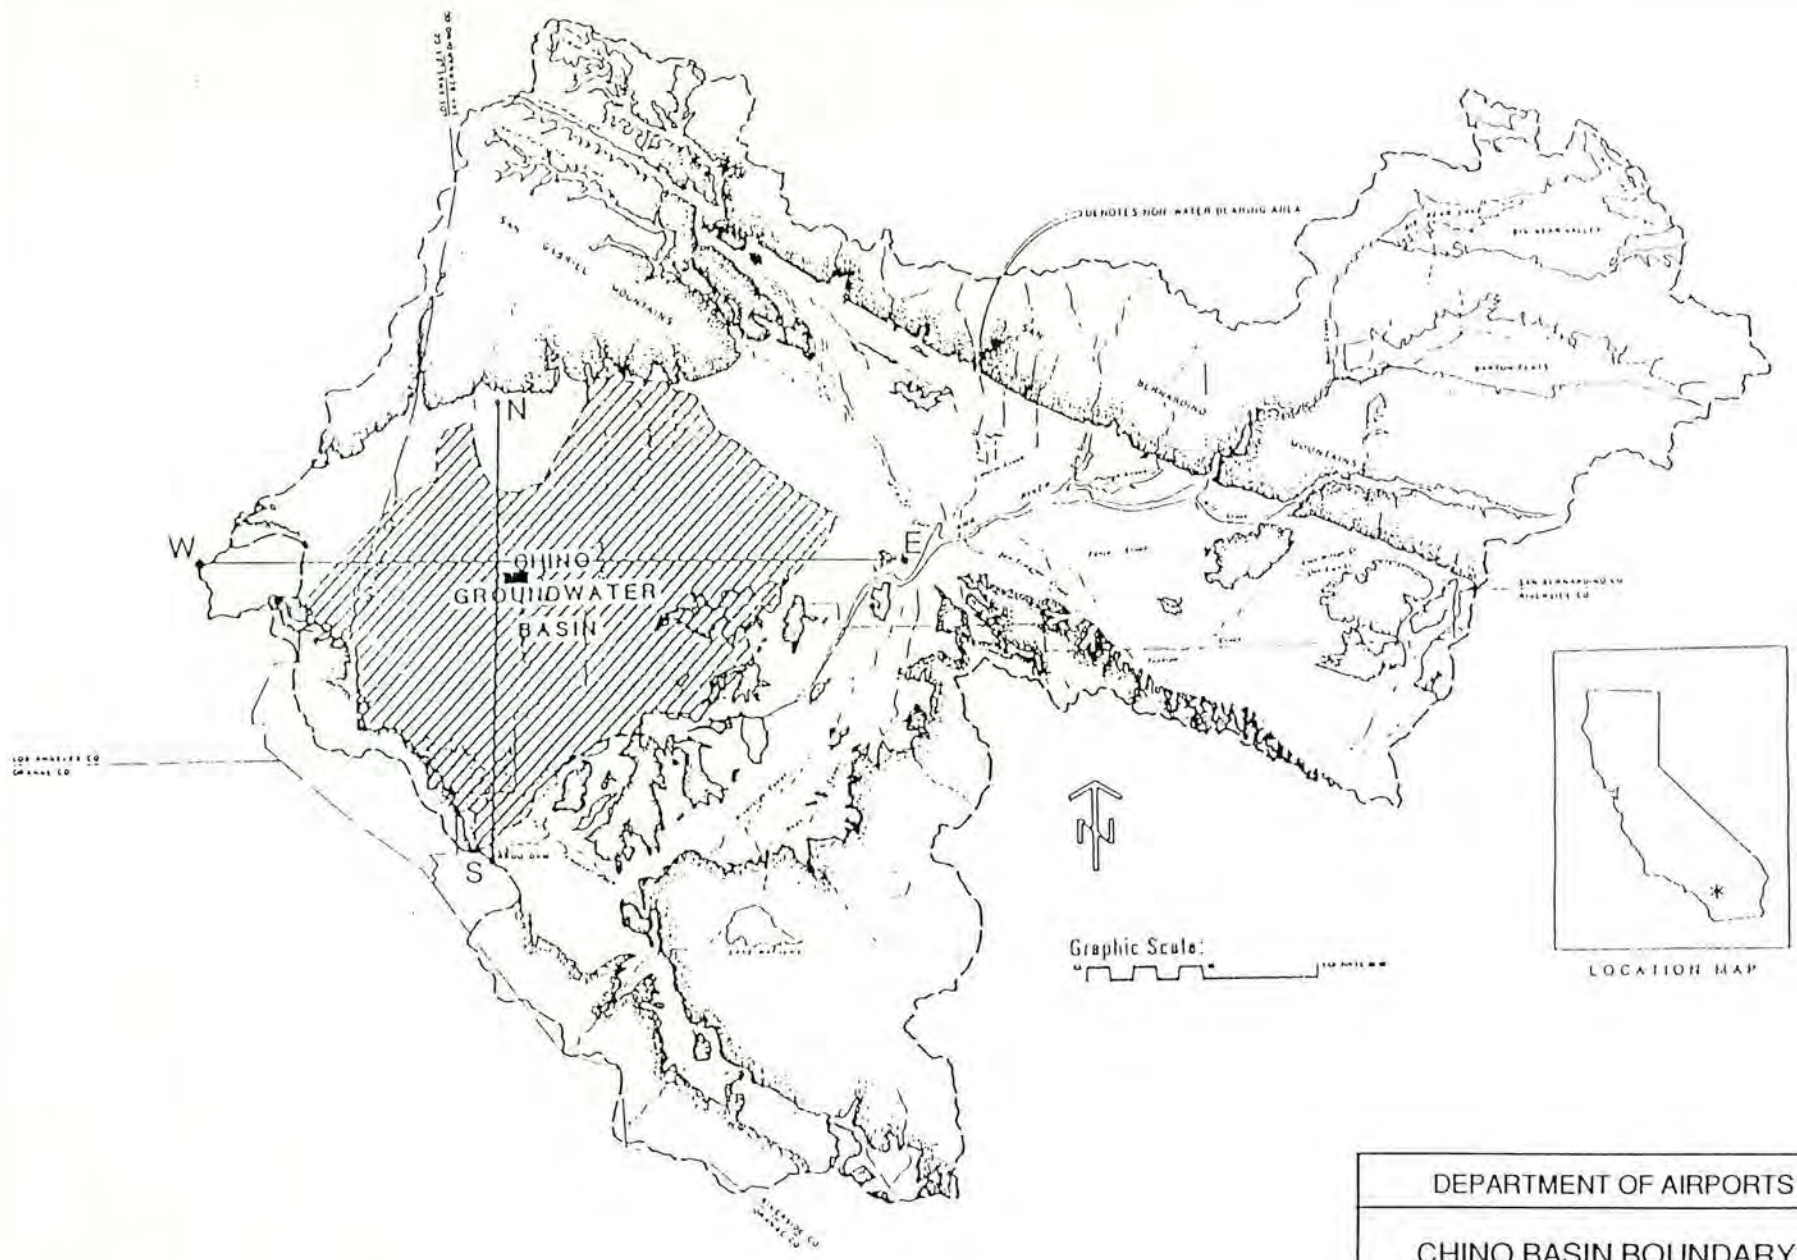

mountain ranges, faults, and a river (Figure 1). The San Gabriel Mountains, the Red Hill Fault, and the San Jose Fault make up the northeast barrier. The Chino Hills and Santa Ana Mountains form the western boundary and the Santa Ana River forms the southern boundary.

The basin was formed as eroded sediments from the surrounding mountains filled a structural depression, which was caused by the downdropping of the Perris block. The basin was filled during two main episodes creating, water-bearing alluvial deposits from the Holocene (younger) and Pleistocene (older) ages. The unconsolidated alluvial deposits, range in grain size from boulders to clay, and vary in depth throughout the basin with a typical depth of approximately 400 feet. The deposits overlie a basement complex of Mesozoic age crystalline rocks of the southern California Batholith. Geologic cross sections in the area are shown in Figure 2. The basement complex and the surrounding granitic mountains do not transmit water except for small quantities in cracks or fissures or where the rock is deeply weathered.

Several fault systems pass through the basin and form ground water barriers marked by discontinuities in ground water elevations. In the south and southeastern parts of the basin, the water-bearing formations pinch out against the basement complex of the Perris block. Faults which form groundwater barriers include the Rialto-Colton, San Jose, Central Avenue, and Chino faults, and the Cucamonga Fault zone.

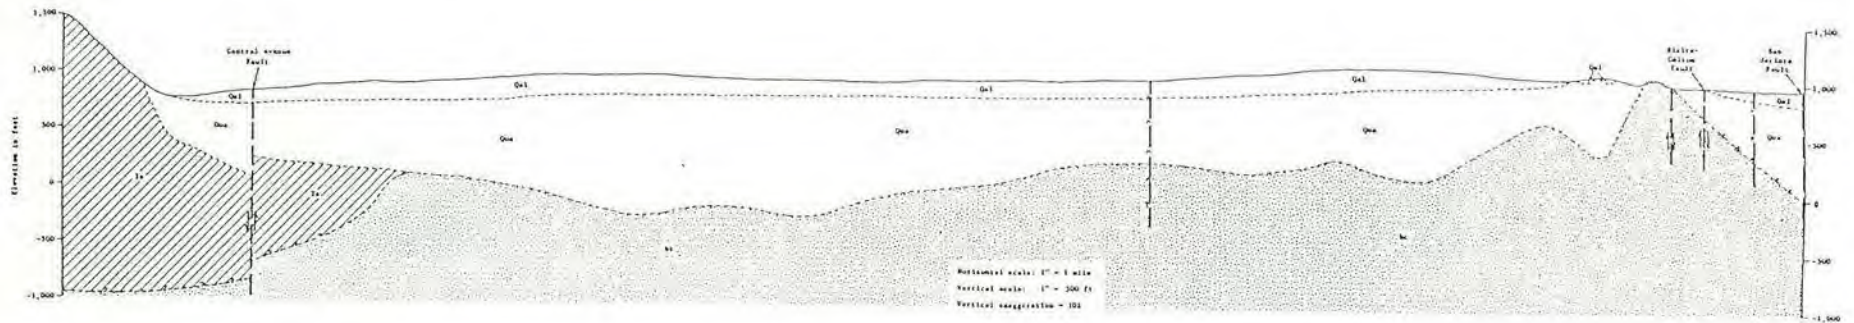

The water-bearing strata in the Chino Basin consists of laterally-discontinuous clays, silts, sands, and gravels. These unconsolidated sediments have been deposited on the basement complex to form one aquifer. The aquifer is generally unconfined but becomes semi-confined to the south towards the Santa Ana River. Values for transmissivity and permeability for Chino Basin range from 80,000 to 400,000 gpd/ft in the southern portion, and 400 to 800 gpd/ft in the northern portion. Well yields in the Basin are typically on the order of 500 to 1500 gallons per minute.

Groundwater levels in the Chino Basin have dropped significantly since 1950. During the late 1960s, increased pumping and low recharge led to

overdraft conditions and rapid decreases in groundwater levels. Improved water management has decreased overdraft in recent years.

Based on hydrologic data from local agencies, the minimum depth to groundwater in the area of ONT is 300 to 350 feet below ground surface, and well into the Pleistocene alluvial deposits.

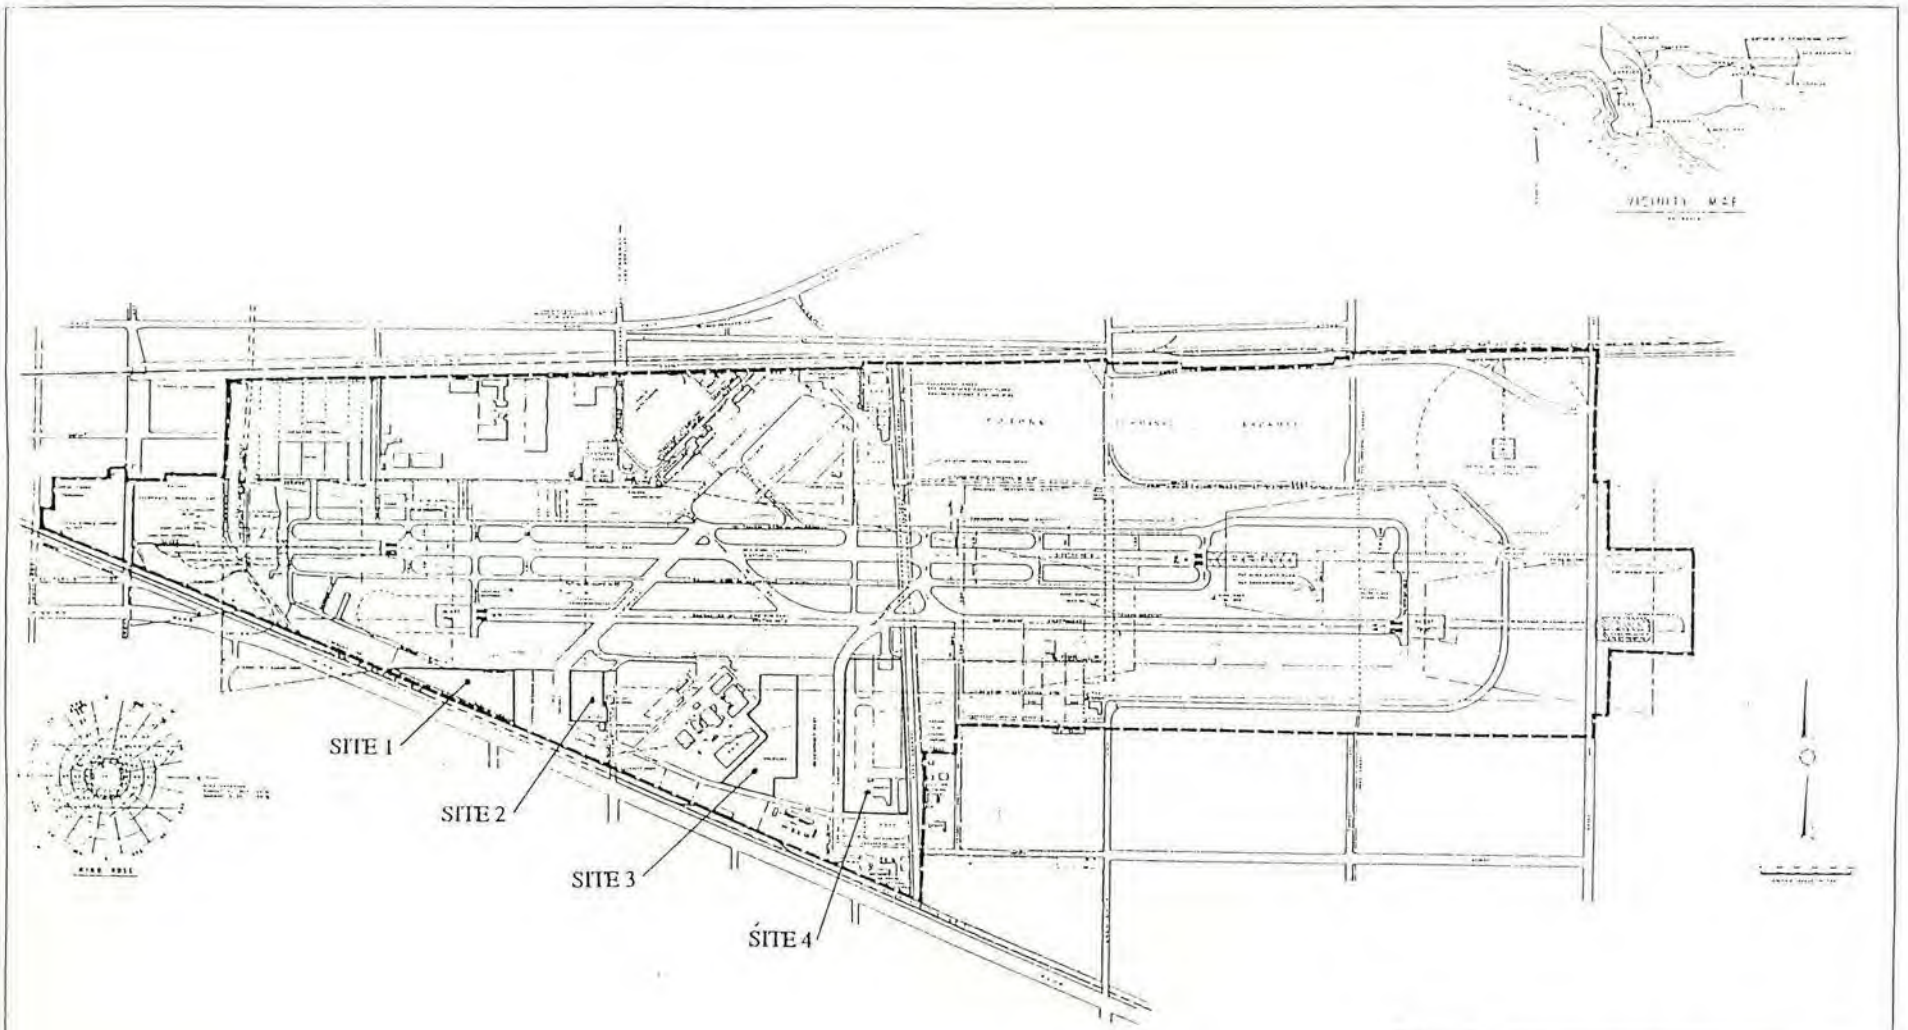

2.1.5 GROUNDWATER QUALITY

Groundwater quality in the Chino Basin has deteriorated due to increasing concentrations of total dissolved solids, nitrates, chlorides, and alkaline earth metals. Evidence of contamination from organic chemicals has also been documented. Over 20 volatile organic compounds (VOCs), several pesticides, herbicides, and fumigants have been found in groundwater samples. Trichloroethylene (TCE, degreasing agent); trihalomethanes (THMs, disinfection by-product); 1,2-dibromo-3-chloropropane (DBCP, formerly used as a soil fumigant); and tetrachlorethylene (PCE, a degreaser and dry cleaning solvent); have been identified in municipal water and agricultural wells throughout the Basin. Several wells have been abandoned due to high VOC concentrations. Samples taken in 1988 from a well located along Cucamonga Creek, approximately two miles downgradient of ONT, have shown concentrations of TCE at 95 ppb. No wells upgradient of ONT have detected TCE. Investigations by water management officials into sources of these pollutants are continuing, with several industries and landfills being investigated as potential point sources of ground water deterioration.

2.2 SITE LOCATIONS AND DESCRIPTIONS

The four subject properties are located in the southern part of Ontario International Airport, as shown in Figure 3. The sites have been termed sites 1 through 4 in this report for identification purposes.

Site 1 is an 8.754 acre empty parcel covered by of grass with some paved areas. No buildings or structures exist on the site. It is bound by an aircraft taxiway to the north, a service road to the west and south, and by

DEPARTMENT OF AIRPORTS	
ONTARIO AIRPORT LAYOUT PLAN AND SITE LOCATIONS MAP	
CDM	FIGURE 3

Site Plan Courtesy of Los Angeles Department of Airports

the Federal Express leasehold to the east. An inactive auto gas station with USTs lies near the northwest boundary of the site. This gas station will be addressed as part of the ongoing Underground Tank and Hazardous Substances (UTAHS) program.

Site 2 is 5.321 acres, and is primarily asphalt with a small grass area in the southeast part of the property. No buildings or structures exist on the site. Directly south of the site is Otto's Instrument Services, east is an inactive fire station, and north and west are aircraft taxiways.

Site 3 is a 13.369-acre parcel covered by asphalt, with a small grass area in the southern-most part of the site. Site 3 is bounded by General Electric to the west, Beechcraft West to the east, Avion Drive to the south, and an aircraft taxiway to the north.

Site 4 is covered by asphalt with a large hanger located in the south-central part of the property. Site 4 encompasses 22.8689 acres. Directly east of the site lies Cucamonga Creek, to the north is an aircraft taxiway, and to the west is a DOA service road. Beyond the service road is a 110 feet wide grass field. West of the field is the Beechcraft West taxiway. To the south of the site is the California Air National Guard and an inactive Lockheed underground fuel tank farm.

2.3 MAP AND AERIAL PHOTOGRAPH REVIEW

Several maps showing the airport layout from the 1940s to present were reviewed. These maps showed the expansion of ONT, illustrating any development that occurred on the sites. Eight sets of aerial photographs dated 4-14-33, 9-8-35, 2-5-39, 11-19-45, 8-24-48, 7-18-49, 8-7-52, and 11-19-52 were reviewed to confirm the site maps and to verify activities at each site. These photographs revealed that the sites underwent few changes during this time period.

Site 1 was planted in vineyards until the early 1940s when the aircraft taxiway and tie-down areas were constructed. No buildings were evident from the photos and the site remains today as it appeared in the 1940s.

Site 2 has undergone few changes. The aerial photos revealed that this site remained planted in vineyards from 1933 to 1952.

Site 3 remained unchanged with the exception that between 1939 and 1945, some of the vineyards were removed so the aircraft tie downs and taxiway could be constructed.

Site 4 has undergone the most changes. Until the mid to late 1950s, Site 4 remained mostly planted in vineyards. In 1945 a dirt access road to Cucamonga Creek was present across the mid part of the site. Directly north of the dirt road, along the west edge of the site, a skeet range was present. This skeet range was also illustrated in the 1945 Army map. Along the north edge of the site were some small buildings which the 1945 Army map identified as Post Engineers storage sheds. The 7-18-49 photograph showed that two additional clearings in the vineyard were made along the west edge of the site, but no structures were erected. By 8-7-52 the clearings had returned to vineyards. The 8-7-52 photo also showed that on area on the west side of Cucamonga Creek contained mounds of imported soil.

2.4 REGULATORY REVIEW

A regulatory review has been conducted to determine if any of the sites have been issued any notice of violations or if other environmental action has been taken by any of the regulatory agencies. The following agencies were contacted:

<u>Agency</u>	<u>Contact</u>
California Regional Water Quality Control Board (CRWQCB), Santa Ana Region	Mike Adackapara Pat Wong (714) 782-4130
County of San Bernardino Department of Health Services (DHS)	
- Hazardous Substance Enforcement	Elizabeth Parmenter (714) 387-3044
- Solid Waste Management	Bonnie Butler (714) 387-4655

<u>Agency</u>	<u>Contact</u>
South Coast Air Quality Management District (SCAQMD)	Charlene Christopher (818) 572-6463
Environmental Protection Agency (EPA)	Ida Tolliver (415) 974-7931
City of Ontario Fire Department (OFD)	Chief Dingman (714) 986-4579

A search of CRWQCB, DHES, SCAQMD, and OFD files has shown that no actions or violations have occurred at the sites. Written responses from the remaining agencies are still pending. Should any of the responses show that action has taken place at any of the sites then an addendum will be made to this Phase I study.

2.5 SITE HISTORIES

Ontario Airport began operations in late 1929 on a 30-acre parcel of land located at the southwest corner of the current airport site. During the 1940s, airport expansion and development continued with the construction of two concrete runways. Shortly after the U.S. entered into World War II, the federal government took control of the airport for use as an observation base which evolved into an Army Air Corps fighter training base and was the site of constant military activity. After the war, the airport was returned to the city of Ontario and rededicated to civil aviation.

Site 1 had vineyards that were removed in the early 1940s. Part of the site was paved for aircraft tie-downs and taxiways. According to 1945 Army map and aerial photographs reviewed no structures were located on the site.

Site 2, according to the 1945 Army map notations and to DOA personnel, never had structures on the site. The site remained covered in vineyards until the mid 1950s or 1960s when the vineyards were removed and part of the site was paved for an aircraft taxiway. The site is presently limited to vehicle parking on the grass area and to aircraft tie-down on the paved areas. No known vehicle or aircraft maintenance occurred at this location.

along the eastern boundary of the site were an engine test cell and Quonset huts. An above ground tank for the storage of fuel was also located in the northeast corner of the site. A plane wash rack was located east of the hanger with its waste water draining to a nearby clarifier and then into Cucamonga Creek. Four 25,000 gallon and one 12,000 gallon USTs were installed during the 1950s and 1960s which stored aircraft fuel and heating oil. The test cell and the Quonset huts no longer exist, however, the clarifier and the fuel USTs still remain on the site, but are inactive. The USTs were abandoned at various times during the 1960s and 1970s by filling the tanks with a soda/water mixture and remain in this condition. These USTs will be addressed as part of the ongoing UTAHS program.

2.6 SITE SURVEY

Two site surveys were conducted on July 25, 1990 and August 22, 1990 by CDM personnel. The purpose of the surveys was to verify documented structures and determine, if possible, that no additional structures or USTs existed on the sites. In addition, an attempt was made to determine the location of the former gas station in relation to Site 1 and locate potential areas requiring Phase II investigations.

2.6.1 SURVEY RESULTS

The location of the former gas station relative to Site 1 was determined by triangulation from known points. The former gas station was determined to have been located approximately 50 feet to the north of Site 1, near the west end. The survey of Site 1 also revealed no visible evidence of previous structures and that the eastern edge of the site is currently being used as additional parking for Federal Express vehicles. The aircraft revetments (dispersal points for aircraft parking) are still located on Site 1 as originally shown on 1945 Army map.

The survey of Site 2 showed a 55 gallon drum on the grass area near the east fence. Site 2 lies adjacent to the inactive DOA fire station at which a UST is still present. This UST is scheduled to be removed as part of the

ongoing UTAHS program. During the site visit it was observed that aircraft parking occurs on the west tarmac area.

Site 3 is presently a high speed driving training area for the San Bernardino County Sheriffs Department. No structures exist on the property, however, evidence of previous structures is visible. Along the eastern border, the base of former blast fencing is visible. This fencing was removed in the early 1980s. A DOA employee said that the area underneath the blast fencing was used for storage. What materials were stored there was not documented. The northwestern area of the site housed several small administration buildings and the outline of the buildings are visible. An old electrical box was also observed on the eastern edge of the site. Two rectangular areas of discolored asphalt were observed in the northern half of Site 3. These areas are comparatively dark in color, however, cause of the phenomenon was not readily apparent.

Site 4 shows the current use of the hanger on Site 4 is DOA and police storage. DOA stores furniture, documents, and some "light" water mix (3-6%), which is used as a fire-fighting agent. The police store vehicles and training equipment in the southern part of the hanger. A 2-stage clarifier is east of the hanger; one stage contained a dark fluid, the other could not be opened for viewing. Along the eastern edge of the site were foundation pads of former small buildings and the housing of a former electrical box. Further north along the eastern border is a pad for a former aboveground storage tank. Documentation of the contents of the tank was not found. According to DOA employees, the northeast corner of the site was an above-ground storage tank facility. Along the western border there is a small grass area where Marston-Mat, temporary metal runway, is located.

2.7 SURROUNDING LAND USE

The surrounding land use review, which included review of the UTAHS report and interviews with surrounding leaseholders, has shown that USTs and/or hazardous substances are present at many of the adjacent leasehold sites. These surrounding uses may be of concern to the subject sites.

To the northwest of Site 1 lies a gas station which has been inactive since 1982. The integrity of the UST has not been determined and is within 50 feet of Site 1. To the west of the study site are two 10,000 gallon USTs on the Federal Express lease. These tanks were installed in 1987, are regularly inventoried, and are equipped with a leak detection system.

Within 30 feet of the eastern Site 2 boundary, there is an UST present at the inactive DOA fire station. This tank is scheduled to be removed and the surrounding soils assessed under the UTAHS program. To the south of Site 2 lies Otto's Instrument Services, which is known to use and store drums of trichlorethylene and lacquer thinner.

Site 3 has several bordering off-site activities of concern. To the south is a Beechcraft West fuel farm that contains seven USTs with a total capacity of 88,500 gallons. These were installed in 1983, are inventoried regularly, annually pressured tested, but are not outfitted with any other monitoring system. West of Site 3 is the General Electric Maintenance Facility which uses significant amounts of several hazardous materials.

To the south of Site 4 is a fuel farm operated by Lockheed. Fuel spills have occurred at this location which are currently under investigation. Also to the south is California Air National Guard (CANG). Activities at this site are primarily limited to vehicle storage and no use of hazardous substances is known to occur. There is an inactive UST at the south of the CANG site near Jurupa Road. Cucamonga Creek, to the east of Site 4, is currently a concrete lined channel with low potential for contributing contamination to the site from upstream sources.

2.8 PHASE I CONCLUSIONS AND RECOMMENDATIONS

The conclusions of the Phase I Environmental Assessment and recommendations are presented in the following sections.

2.8.1 CONCLUSIONS

Based on the findings of the Phase I Environmental Assessment, there may have been some hazardous material use or storage on/near some of the sites

that may warrant further investigation. No evidence of USTs, that were not previously reported in 1988 UTAHS report, were found.

At Site 1, contaminated soils from the inactive gas station north of the site will be addressed under the UTAHS program and require no action from this assessment. The aircraft revetment that lies within Site 1 should be further investigated. Historically, revetments were the site of fueling and maintenance of aircraft and soil contamination may have occurred. Although Federal Express uses part of Site 1 as additional parking, no known maintenance occurs. Therefore, the potential for soil contamination from this activity is minimal.

Site 2 is near an UST at the inactive DOA Fire Station, which will be addressed in the UTAHS program. The contents of the 55-gallon drum are unknown. The fence line of Otto's Instruments may be a problem because of the drums of hazardous materials stored there.

Site 3 may contain areas of soil contamination from several sources. The Beechcraft West fuel farm, the former electric box, the discolored asphalt areas in the north-central part of the site, and the border of General Electric. General Electric uses and stores numerous types and quantities of hazardous substances. Several drums and tanks of unknown status are stored along the fence line and may potentially have impacted Site 3.

Site 4 contains areas of potential soil contamination near the former AST, the Test Cell, and electrical box. The dark fluid present in the clarifier is unknown. Although aerial photographs indicated soil was imported to the northeast corner of the site, DHS officials had no documentation that hazardous substances were disposed of there.

2.8.2 RECOMMENDATIONS

Site 1 is potentially contaminated as a result of aircraft activities in the area, possibly including maintenance. It is recommended that two soil borings be advanced within the revetment perimeter, on opposite sides. With each boring, soil samples will be collected in each boring at the soil

surface, and 2.5, 5, 10 and 15 feet below the surface. If field screening of these samples finds significant levels of contamination, a third boring with soil sampling is recommended. This third boring will also be located within the other two borings. Field screening, using a Flame Ionization Detector along with lithologic and depth information, will be used to determine which samples will be laboratory analyzed. Laboratory analyses using methods 8010, 8020 and 8015M and 418.1 will be performed on the selected samples.

Site 2 is potentially contaminated as a result of drummed hazardous materials storage in two areas: the abandoned 55-gallon drum and the fence line of Otto's Instruments. It is recommended that one sample be collected from the abandoned drum's contents and the neighboring surface soil. It is also recommended that two borings be advanced along the fence line of Otto's Instruments with soil samples collected at the surface, and 2.5', 5', 10' and 15' below the surface. Field screening as above will determine which samples will be laboratory analyzed. Laboratory analyses using methods 8010, 8020 and 8015M and 418.1 will be performed on the selected soil samples.

Site 3 is potentially contaminated in four areas as a result of USTs and hazardous materials usage. The areas near the General Electric fence line, the Beechcraft West fuel farm, the areas of different colored soils and the former electrical box. Using the soil boring and analytical protocols specified for Site 1, two borings are recommended at the GE fence line, one boring each near the Beechcraft West fuel farm, and the areas different colored soil. Another boring is recommended near the former electrical box with samples analyzed for petroleum hydrocarbon (method 418.1) and polychlorinated biphenyls (PCBs) (method 8080).

Site 4 is potentially contaminated in five areas. At the electric station, it is recommended that a soil sample be collected using criteria detailed for Site 3. At the clarifier, it is recommended that samples of fluid be collected at both stages, and analyzed using methods 601, 602, 8015M, 413.2 and 608. Because the clarifier may have leaked or overflowed, one boring is recommended at both the influent and effluent ends, completed as detailed for Site 1.

Borings are also recommended for both the former engine Test Cell and former AST location, the area suspected of having imported soil, and near the former electrical box.

In summary, the Phase I Assessment has revealed several potential locations within the sites which may contain contaminated soils. The recommendations for the Phase II Investigation are summarized below:

- Site 1) Soil/Gas survey on/near aircraft revetment.
- Site 2) Soil/Gas survey along Otto's Instrument fenceline extending to westernmost border nearest to Fluor's property.
 -) Sampling and removal of the observed 55 Gallon drum.
- Site 3) Sampling of soils around the transformer pad for possible PCBs. This pad is located along the eastern edge of the property.
 -) Soil/Gas survey on different colored areas, north end of site.
 -) Soil/Gas survey along General Electric border near storage area.
 -) Soil/Gas survey near Beechcraft West fuel farm.
- Site 4) Sampling, characterization, and proper disposal of clarifier fluid.
 -) Soil/Gas survey near clarifier.
 -) Sampling at electrical station on eastern border for possible PCBs.
 -) Soil/Gas survey near former Engine Test Cell location.
 -) Soil/Gas survey at former AST location along eastern edge of property.
 -) Soil boring at northeast corner at former disposal site.

3.0 - PHASE II INVESTIGATION

The Phase II Environmental Assessment of the subject sites was conducted by CDM personnel on September 24 and 25, 1990. Ninyo & Moore provided field assistance to CDM personnel during drilling and sampling. Field activities included discrete tasks which are described in the following sections of this document.

3.1 DRILLING AND SAMPLING PROGRAM

All boring locations were approved by Underground Service Alert after contacting all applicable underground utility companies.

Beylik Drilling, Inc., of La Habra, California, was contacted to perform borehole drilling and sampling services. Drilling was performed using a Mobile B-61 hollow stem auger rig and two-man crew. A 2-inch diameter split-spoon sampler was utilized for subsurface soil sample collection. A total of 16 borings were drilled. Samples were nominally collected at 0.0, 2.5, 5.0, 10.0, and 15.0 feet below ground surface. Appendix A shows individual borehole logs and actual sample locations. Each sample collected was field screened for volatile organic emissions utilizing a Foxboro 128 Flame Ionization Detector (FID) and the screening data was recorded on the boring log. The boring locations at each site are shown in Figures 4 through 7.

Drilling activities began with mobilization to Site 3 on September 24, 1990. Boring B-1 was placed near the Beechcraft West fuel farm. Field FID readings showed readings of 0 from all of the samples collected. Borings B-2 and B-3 were placed along the General Electric property fenceline. FID readings in B-2 showed a slight response of 5 to 7 ppm throughout the boring and up to 6.5 ppm in boring B-3. Boring B-4 was placed on the "discolored" area noted in the Phase I assessment. No FID response was detected in any of the samples collected from the boring. B-5 was placed along the east side of the site near the electrical housing box. The FID showed a response of 14 ppm at 0.0 feet, 10 ppm at 2.5 feet, and 4 ppm at 5.0 feet.

Upon completion of drilling at Site 3, Site 1 was investigated. Boring B-6 was placed on the east side of the former revetment and B-7 was placed on the west side. Field FID screenings showed little to no response, so a third boring at the revetment was determined to be not warranted.

Drilling moved to Site 2 following activities at Site 1. Borings B-8, B-9, and B-10 were drilled and placed along Otto's Instrument Service property line. Field FID screening was not conducted on samples collected from these borings because of a malfunction of the instrument.

On September 25, 1990, drilling resumed at Site 4. Borings B-11 and B-12 were placed near the clarifier east of the hangar. FID readings up to 210 (influent) and 60 ppm (effluent) respectively, were observed. The maximum values at both locations were at 5.0 feet, which is at the level just below the bottom of the clarifier. Boring B-13 was placed near the former electrical housing and FID readings averaged about 110 ppm from 2.5 feet down to 15.0 feet. B-14 was located at the former above ground storage tank site and at the 5.0 foot depth, an FID reading of 210 ppm was measured. B-15 was placed at the former test cell location and the FID showed no indication of organic vapors present. The final boring, B-16 was drilled to investigate soils adjacent to the former tank pad and to sample the area reported to be imported soil. The FID showed a reading of 225 ppm at a depth of 5.0 feet at this location.

As the boring logs indicate, the subsurface lithology consisted primarily of sand, silt, and gravel. No groundwater was encountered during any of the drilling.

Upon completion of the drilling activities at each site, the boreholes were backfilled with native materials with the exception of borings B-12, B-13, B-14, and B-16. These borings showed comparatively high FID readings and were therefore backfilled with a 5 percent bentonite cement grout mixture. Soil cuttings from these boreholes were contained in separate 55-gallon drums and later picked up by DOA personnel and stored pending laboratory results.

3.2 TWO-STAGE CLARIFIER SAMPLING

Samples were collected from the two-stage clarifier east of the hangar at Site 4. Each stage appeared to be about 3/4 full. The clarifier had a very pungent odor similar to old, stagnant water. Near the inlet point of stage 1, the surface of the fluid was frothy, but no surficial oil or sheen was noticed. Fluid was collected from each stage using a new disposable bailer for each stage. Samples of the fluid collected appeared to be clear, but had green algae type particles floating in it. After delivery to the laboratory, corresponding containers from each stage were composited and analyzed.

3.3 EQUIPMENT DECONTAMINATION

All downhole equipment (drill rods and bits) were decontaminated by steam cleaning prior to each use. The sampling spoons were decontaminated by an alconox solution wash, tap water rinse, double rinse with DI water, and a final rinse with methanol.

3.4 SAMPLE HANDLING

After collection, the soil samples and water samples were promptly labeled and placed into ice-filled coolers. All samples were accompanied with chain of custody forms and hand delivered to Terra Tech Labs in Huntington Beach, California for analysis. Appendix B shows copies of the original chain of custody forms.

4.0 - FINDINGS

During the Phase II investigation, a total of 77 samples were collected. Seventy-five were soil samples from the borings and the remaining 2 were water samples from the clarifier at Site 4.

During the soil boring operation, five samples were not collected due to refusal of the sampling tool or the sample was lost due to its dry composition and fine-grained texture. These samples include: B-1-15.0, B-4-10.0, B-6-15.0, B-11-10.0, and B-14-15.0.

Not all samples were chosen for laboratory analysis. Most selected samples were chosen based on elevated field FID readings and/or visual evidence of possible contamination. The chain of custody forms in Appendix B show, with a check mark, the samples selected and the analyses performed.

The California Water Resources Control Board has developed, within its Leaking Underground Fuel Tank (LUFT) manual, guidelines for determining cleanup levels for soil at contaminated sites. The guidelines help to classify sites into categories based on the degree of contamination. Table 1 illustrates the LUFT work sheet for determining the maximum allowable soil concentrations for benzene, toluene, xylene, and ethylbenzene. The work sheet shows that the maximum allowable concentrations for the above substances based on the character of the site are 1/50/50/50 ppm, respectively. The maximum allowable total petroleum hydrocarbons (TPH) for gasoline and diesel are 1,000 and 10,000 ppm, respectively. Based on these criteria, none of the samples analyzed are above the allowable concentrations with the exception of B-4-2.5 which has an anomalous value of 25,000 ppm of TPH (Table 2). The metals analyses of samples B-14-2.5 and B-15-5.0 appear to be elevated but the concentrations reported are still below the Total Threshold Limit Concentration (TTLC) as defined by the Environmental Protection Agency (Table 3). The clarifier sample results showed that no volatile organics, pesticides, PCBs, or unusual levels of metals were present. However, a trace amount of cyanide was reported (Table 4).

TABLE 1
LUFT MANUAL WORKSHEET

Leaching Potential Analysis for Gasoline and Diesel
Using Total Petroleum Hydrocarbons (TPH)
and Benzene, Toluene, Xylene and Ethylbenzene (BTX&E)

The following table was designed to permit estimating the concentrations of TPH and BTX&E that can be left in place without threatening ground water. Three levels of TPH and BTX&E concentrations were derived (from modeling) for sites which fall into categories of low, medium or high leaching potential. To use the table, find the appropriate description for each of the features. Score each feature using the weighting system shown at the top of each column. Sum the points for each column and total them. Match the total points to the allowable BTX&E and TPH levels.

SITE FEATURE	S	SCORE	S	SCORE	S	SCORE
	C	10 PTS	C	9 PTS	C	5 PTS
	O	IF CON-	O	IF CON-	O	IF CON-
	R	DITION	R	DITION	R	DITION
	E	IS MET	E	IS MET	E	IS MET

4.0 - FINDINGS

During the Phase II investigation, a total of 77 samples were collected. Seventy-five were soil samples from the borings and the remaining 2 were water samples from the clarifier at Site 4.

During the soil boring operation, five samples were not collected due to refusal of the sampling tool or the sample was lost due to its dry composition and fine-grained texture. These samples include: B-1-15.0, B-4-10.0, B-6-15.0, B-11-10.0, and B-14-15.0.

Not all samples were chosen for laboratory analysis. Most selected samples were chosen based on elevated field FID readings and/or visual evidence of possible contamination. The chain of custody forms in Appendix B show, with a check mark, the samples selected and the analyses performed.

The California Water Resources Control Board has developed, within its Leaking Underground Fuel Tank (LUFT) manual, guidelines for determining cleanup levels for soil at contaminated sites. The guidelines help to classify sites into categories based on the degree of contamination. Table 1 illustrates the LUFT work sheet for determining the maximum allowable soil concentrations for benzene, toluene, xylene, and ethylbenzene. The work sheet shows that the maximum allowable concentrations for the above substances based on the character of the site are 1/50/50/50 ppm, respectively. The maximum allowable total petroleum hydrocarbons (TPH) for gasoline and diesel are 1,000 and 10,000 ppm, respectively. Based on these criteria, none of the samples analyzed are above the allowable concentrations with the exception of B-4-2.5 which has an anomalous value of 25,000 ppm of TPH (Table 2). The metals analyses of samples B-14-2.5 and B-15-5.0 appear to be elevated but the concentrations reported are still below the Total Threshold Limit Concentration (TTLC) as defined by the Environmental Protection Agency (Table 3). The clarifier sample results showed that no volatile organics, pesticides, PCBs, or unusual levels of metals were present. However, a trace amount of cyanide was reported (Table 4).

5.0 - RECOMMENDATIONS

Based on an evaluation of the analytical data from the soil borings and the water samples, subsurface contamination originating from on-site sources does not appear to be present at Site 1, Site 2, Site 3, and Site 4. An anomolous elevated TPH value was encountered at depth 2.5 feet at soil boring location B-4 at Site 3. This sample was taken beneath a thick layer of asphalt which may have been incorporated into the sample causing an elevated TPH measurement. The other analyses performed on the sample indicate that all other constituents are below detectable levels and also the sample B-4-0.0, which directly overlies B-4-2.5, showed nondetection of TPH and all other constituents analyzed. Field FID measurements of the sample indicated no presence of volatiles and suggests that the elevated TPH value in the laboratory report may in fact be an analytical error and not soil contamination at Site 3.

The following recommendations are hereby made for the sites:

Site 1 - No further action required

Site 2 - Removal of the empty 55-gallon drum

Site 3 - No further action required

Site 4 - Removal of clarifier fluid by reputable disposal contractor. The intake of the clarifier should then be blocked to prevent further use.

Approved

The samples were received by TERRA TECH LABS, Inc. in a chilled state, intact and accompanied by the Chain-of-Custody Record.
Acceptance of samples by Terra Tech Labs, Inc. is not an indication of condition upon receipt.
Laboratory Results apply only to the sample matrix analyzed and may not apply to an apparently identical or similar sample.
The Laboratory Report is the property of the client to whom it is addressed.
The Laboratory Results are only a portion of the Laboratory Report.

1.0 INTRODUCTION

El Capitan Environmental Services, Inc. (El Capitan), has been retained by the Department of Airports (DOA) of the City of Los Angeles to remove five underground storage tanks (USTs) and the associated pipings, appurtenances, and incidentals from the California Air National Guard site located at Ontario International Airport, Ontario, California under the project entitled "Underground Tank Removals - Phase 2". The work has also included excavating and disposing of hydrocarbon-impacted soil, backfilling excavated pits, and compacting to grade surface.

This report describes the tank contents and UST removal activities, post-removal soil sampling, excavating and disposing contaminated soil, confirmation soil sampling, and backfilling and compaction of excavated pits; and also presents conclusions and recommendations.

2.0 SITE DESCRIPTION

The subject site is located at the south-western portion of Ontario International Airport's property boundary (see Figure 1 for Site Location Map). The tanks were located within the former California Air National Guard facility. Five USTs (T5 through T9) were located at the site. Tanks T5 through T8 were located south of taxi way #2, to the west of the Cucamonga Creek channel (see Figure 2 for tank locations). The capacity of each of the former gasoline tanks was 25,000 gallons. Tank T9 was located to the west of the boiler room (see Figure 3 for the location of the tank). The capacity of tank T9 was 10,000 gallons, and it was used to store diesel fuel.

Environmental Services, Inc.

3.0 REMOVAL OF SODA WATER

Tanks T5 through T8 were believed to be filled with soda water, chemical analysis, however, showed that the water was impacted with dissolved gasoline and its constituents (benzene, toluene, ethylbenzene and xylenes, BTEX). Four water samples (T-5 through T-8), one from each tank, were collected to profile the contaminated water. The samples were collected, using teflon bailers, in 40-ml clear glass vials and capped with teflon-lined screw caps with zero head space. The vials were labeled and placed in an ice chest with blue ice. All samples were delivered within 24 hours, under chain-of-custody, to Applied P & Ch Laboratory (APCL), Pomona, California, for pH analysis by EPA Method 150.1/9040, total petroleum hydrocarbons (TPH) as gasoline, by EPA Method 8015 Modified, and volatile organic compounds (VOCs) by EPA method 624. APCL is a state-certified laboratory for chemical analysis.

The detailed chemical analysis and chain-of-custody documentation are attached in Appendix B. The summary of the results are presented in Table 1. Chemical analysis showed that the water was contaminated with gasoline and BTEX. The level of TPH and BTEX precluded the discharge of water into a storm drain or a sewer line without prior treatment. The water was manifested as hazardous waste liquid, pumped out by vacuum trucks, and hauled to the Norris Environmental Services facility (NES), Los Angeles, California for treatment. A total of 102,400 gallons of contaminated water was hauled to NES for treatment. Copies of the water disposal manifests are attached in Appendix A.

Environmental Services, Inc.

4.0 UST REMOVAL

The UST removal permits were obtained from San Bernardino County Department of Environmental Health Services (SBCDEHS) and City of Ontario Fire Safety Control Bureau (COFSCB). Copies of the permits are attached in Appendix A. On December 1, 1994, El Capitan removed all USTs (T5 through T9) and their associated piping, filters, and dispensers from the subject site, in accordance with the Ontario Municipal Code and the Standard Specifications for Public Works Construction. The USTs were uncovered by excavating the soil with the aid of a track-mounted excavator. The excavated soils were stockpiled on site. Visibly contaminated soils were segregated from clean soils. Continuous air monitoring was performed for VOC, during the excavation, by a photoionization detector (PID), as per requirements of SCAQMD rule 1166.

Residual product inside the tanks was pumped out by Western Environmental Engineers Co. (WEECO), Santa Ana, California. The tanks and the associated pipings were rinsed with pressurized water by WEECO and the generated rinseate was transported to DeMenno Kerdoon, of Compton, California, for treatment. Copies of the rinseate manifests are attached in Appendix A. Windows were cut in the tanks for visual inspection and dry ice was placed in the tanks to suppress the explosive atmosphere inside the tanks. Visual soil contamination was observed at UST locations T5 through T8. No visual soil contamination or odor was observed at UST location T9.

All tanks were made of single wall steel, and they appeared to be intact, with no visible cracks or holes. The removed tanks were taken to the American Metal Recycling, Inc. (AMR) facility, Ontario, California, for recycling. Copies of the tank disposal certification are included in Appendix A. UST removal was witnessed by Mr. Michael Ward of SBCDEHS, as well as by Mr. Frank

Environmental Services, Inc.

Haddleston and Mr. Thomas Mitchell of COFSCB.

4.1 Soil Sampling During UST Removal

After removing the USTs, several soil samples were collected from the inverts of the former USTs. Soil samples were collected under the direction of Michael Ward of SBCDEHS on December 1, 1994.

Ten soil samples were collected at approximately 3 ft below the tank inverts. Two soil samples were collected from each tank location (see Figures 2 and 3 sample locations). The tank numbers and the corresponding sampling identification numbers are as follows:

<u>Tank No.</u>	<u>Sample ID No.</u>
T5	T5-A, T5-B
T6	T6-A, T6-B
T7	T7-A, T7-B
T8	T8-A, T8-B
T9	T9-A, T9-B

4.2 Sampling Procedure

Soil samples from the UST pits were collected using the bucket of an excavator. A hand driven sampler equipped with a precleaned, 2-inch diameter, 6-inch long, brass sleeve was used to collect an undisturbed portion of soil from the backhoe bucket. Soil samples were retained in the brass liner, then removed and immediately

Environmental Services, Inc.

covered at each end with teflon sheets, capped, and sealed with tape. All samples were labeled with the date, location, sample identification number, and sampler's initials, then immediately stored in a chilled container under blue ice. Proper chain-of-custody protocols were observed throughout all phases of the sample handling process.

4.3 Analytical Results

Soil samples collected during the USTs removal were submitted to APCL and were analyzed as applicable for BTEX by EPA Method 8020, TPH as gasoline and diesel by EPA Method 8015 Modified, and total lead by EPA Method 7420. Detailed laboratory analysis, laboratory QA/QC, and chain-of-custody documentation are included in Appendix B. The summary of the analytical results is presented in Table 2 and is discussed below:

- Soil sample collected from tank invert of T9 was not impacted with TPH or BTEX. The measured concentrations of TPH and BTEX were non-detectable (ND).
- Soil samples collected from tank inverts of T5 through T8 were impacted with TPH and BTEX. TPH concentrations ranged from ND to 3,750 mg/kg; benzene concentrations ranged from ND to <0.5 mg/kg; toluene concentrations ranged from ND to 16.2 mg/kg;

Environmental Services, Inc.

ethylbenzene concentrations ranged from ND to 8.8; total xylene concentrations ranged from ND to 86 mg/kg.

- Lead concentrations ranged from ND to 32 mg/kg and are believed to represent the native soil conditions.

5.0 POST-TANK REMOVAL EXCAVATION

El Capitan submitted to SBCDEHS a workplan for excavation of the contaminated soil at the area of former tanks No. 5 through 8 (El Capitan, December 7, 1994). The SBCDEHS reviewed the workplan and provided its comments in its letter dated December 22, 1994 (SBCDEHS, December 22, 1994). Copies of SBCDEHS correspondences are provided in Appendix D.

On January 6, 1995, El Capitan excavated the hydrocarbon-impacted soil from the western side of the former T7 and T8 locations. The excavated area is depicted in Figure 4. The excavated pit was 29 ft deep bgs, and it measured 16 ft from east to west and 34 ft from north to south. The excavation was achieved by making a ramp of 1 to 1 slope at the north-western corner of the tank's pit utilizing a track-mounted excavator.

The excavated soil was monitored both visually and also by an organic vapor analyzer (OVA), to determine the extent of

Environmental Services, Inc.

excavation. OVA was also used for air monitoring in compliance with SCAQMD Rule 1166. The excavated impacted soils were segregated from the clean soils, and they were stockpiled on site (see Figure 5).

Nine confirmation samples were collected from the bottom and walls of the pit, under the direction of SBCDEHS Inspector, Mr. Ronald A. Ripley (see Figure 4 for sample locations). Three samples (SB-1 @ 29' through SB-3 @ 29' bgs) were collected from the bottom of the pit. One sample (SW-1 @ 27') was collected from the south wall, at 27 ft bgs; two samples (WW-1 @ 26' and WW-2 @ 26') were collected from the west, wall at 26 ft bgs; one sample (NW-1 @ 26') was collected from the north wall, at 26 ft bgs; and two samples (EW-1 @ 27' and EW-2 @ 27') were collected from east wall, at 27 ft bgs. The samples were analyzed for TPH and BTEX by APCL. Detailed laboratory analysis, QA/QC data, and chain-of-custody documentation are attached in Appendix B. The summary of the results is presented in Table 3 and is discussed below:

- TPH and BTEX concentrations were ND in soil samples collected from the south, west, and north walls. However, soil samples collected from the bottom of the pit and east wall still showed the presence of elevated concentrations of TPH and BTEX. TPH concentrations ranged from 730 to 1,800 mg/kg. Therefore, additional excavation was performed at those

Environmental Services, Inc.

Therefore, additional excavation was performed at those locations, as described in the next section.

5.1 Additional Excavation

El Capitan performed the additional excavation on January 30, 1995 to remove the remaining contaminated soil at the bottom and east wall of the pit. Prior to the excavation, the concrete slabs, found beneath the former tanks T5 through T8, were broken and removed on January 20, 1995.

The additional excavation was performed at the bottom and at the eastern wall of the existing pit utilizing a track-mounted excavator. The plot plan of the boundary of this new excavated pit is shown in Figure 4. The depth of the pit was 35 ft bgs, and it measured 35 ft from east to west and 42 ft from north to south.

The excavation was performed in the same way as described in the previous section.

On January 30, 1995, six new soil confirmation samples were collected from the bottom and the walls of the excavated pit, under the direction of SBCDEHS Inspector, Ms. Catherine Richards (see Figure 4 for the sample locations). Two samples (SB-4 @ 35' and SB-5 @ 35') were collected from the bottom of the pit, at 35 ft bgs; one sample (NW-2 @ 30') was collected from the north wall, at

Environmental Services, Inc.

wall, at 35 ft bgs; one sample (EW-3 @ 35') was collected from the east wall, at 35 ft bgs; and one sample (SEW @ 33') was collected from the south-east wall, at 33 ft bgs.

The soil samples were analyzed by APCL for TPH (jet fuel and gasoline) and BTEX. Detailed laboratory analysis, QA/QC data, and chain-of-custody documentation are attached in Appendix B. The summary of the analytical results is presented in Table 3 and discussed below:

- All the six confirmation samples, except SEW @ 33' and SB-4 @ 35', did not show the presence of detectable concentrations of TPH and BTEX. Sample SEW @ 33' registered 450 mg/kg of TPH as jet fuel and 41 mg/kg as gasoline, < 0.05 mg/kg of benzene, 0.154 mg/kg of ethylbenzene, and 2.38 mg/kg of total xylenes. Sample SB-4 @ 35' contained trace amount of total xylenes (0.044 mg/kg) and no TPH or other VOCs.

6.0 STOCKPILE PROFILING

During the UST removal and contaminated soil excavation, the hydrocarbon-impacted soils were segregated from the non-contaminated soils, and, as a result, a total of seven stockpiles were generated at the site. One stockpile was generated in the T9 area, and the remaining six stockpiles (stockpile #1 through stockpile #6) were generated in the T5 through T8 areas (see Figure

Environmental Services, Inc.

3 and 5 for stockpile locations).

The stockpile in the T9 area and stockpiles # 1 through # 3 were not contaminated according to visual observation and OVA field monitoring. One soil sample (SP-2-1) was collected from stockpile #1. Sixteen soil samples were collected from stockpiles # 4 through #6 which appeared to be contaminated according to field observations. Six samples (SP-1-1 and SP4-1 through SP4-5) were collected from stockpile #4; five samples (SP5-1 through SP5-5) were collected from stockpile #5, and five samples (SP6-1 through SP6-5) were collected from stockpile #6.

The samples were analyzed by APCL for BTEX by EPA Method 8020, TPH by EPA Method 8015 Modified, TRPH by EPA Method 418.1 and total lead by EPA Method 7420. Detailed laboratory analysis, QA/QC data, and chain-of-custody documentation are presented in Appendix B. The summary of the laboratory results is presented in Table 4 and is discussed below:

- Soil sample collected from stockpile #1 did not show the presence of detectable concentrations of BTEX, TPH, or total lead.
- Soil samples collected from stockpile #4 through #6 showed the presence of significant concentrations of TRPH, ethylbenzene,

Environmental Services, Inc.

total xylenes, and trace concentrations of benzene and toluene. TRPH concentrations ranged from 175 to 2,910 mg/kg; ethylbenzene concentrations ranged from ND to 3.47 mg/kg; total xylenes concentrations ranged from ND to 33.9 mg/kg; benzene ranged from ND to .013 mg/kg; and toluene ranged from ND to <0.05 mg/kg. Therefore, these stockpile (#4 through #6) soils were shipped off site for treatment.

7.0 SOIL DISPOSAL

El Capitan manifested and arranged for transportation of the contaminated soils (stockpiles #4 through #6) to TPS Technologies (TPS), Adelanto, California for thermal desorption. Copies of the soil disposal manifests are provided in Appendix C. A total of 1,838.42 tons of contaminated soil was shipped to TPS between February 9 and February 10, 1995.

8.0 BACKFILLING

The excavated pits were backfilled with excavated, non-contaminated soil (stockpiles No. 1 through No.3) and with clean soil provided by DOA, to 90% and 95% relative compaction, up to natural grade surface. Compaction was performed and tested under the supervision of the DOA.

Environmental Services, Inc.

9.0 CONCLUSIONS AND RECOMMENDATIONS

The former UST T9 location was found to be not impacted with TPH or BTEX. However, the subsurface soil at the former UST of T5 through T8 location was found to have been impacted with petroleum hydrocarbons. The contaminated soil was removed by two stages of excavations. Post-excavation confirmation samples showed that the contaminated soil has been effectively removed except for minor or insignificant residual concentrations. The contaminated soils were hauled off site to TPS facility for thermal desorption. The UST pits were backfilled with clean soil. El Capitan recommends no further action at former UST locations.

CTL Environmental Services

PHASE I ENVIRONMENTAL SITE ASSESSMENT

of:

**Former Air National Guard & Surrounding Area
Ontario, California**

Prepared for

Los Angeles World Airports

CTL Project Number 601-0195

Reported : August 30, 2001

CTL Environmental Services 24404 South Vermont Avenue, Suite 307
Harbor City, CA 90710 (310) 530-5006 Fax (310) 530-0792

Los Angeles World Airports

Date: October 5, 2001

Memo To: Jens O. Rivera, Airport Manager
Attn: Robin Rollins

From: Maurice Laham, Airport Environmental Manager

Subject: **ONT – Former Air National Guard Hangar & Surrounding Area
(2132 Avion Drive) – Phase 1 Environmental Site Assessment**

The Environmental Management Division (EMD) directed LAWA's consultant CTL Environmental Services to perform a Phase I Environmental Assessment on the above referenced site. An inspection of the Hangar and surrounding area was conducted on August 23, 2001 and a records review of all known hazardous databases was performed. The results are presented in the August 30, 2001 report (three copies attached) entitled, "**Phase I Environmental Site Assessment of Former Air National Guard & Surrounding Area Ontario, California.**" Provided below is a summary of the investigation results and conclusions:

Findings

1. The military, Army Air Corps and the Air National Guard, utilized the site from the early 1940s through the mid-1980s. According to a U.S. Army Corps of Engineers (USACE) representative, an "Inventory Project Report" has been prepared for the site however, it has not been signed by headquarters and is therefore unavailable for review. The report reportedly would provide the most current accounting of activities at the site.
2. Six underground tanks have been associated with the site: four tanks at the former fueling pad and two tanks from the boiler units. Soil analysis results from 1994 identified only five USTs. The second UST near the boiler has not been accounted for. Elevated concentrations of Total Petroleum Hydrocarbons (TPH) and Benzene, Toluene, Ethyl Benzene & Xylenes (BTEX) were detected at the fueling pad.
3. The military utilized the site for aircraft repair/overhaul as well as aircraft washdown. A USACE report from March 1991, indicated the use of fuel, paint strippers, solvents, etc.
4. Prior to the 1970s, chemicals and washdown waters were discharged into dirt ditches that emptied into the unlined Cucamonga Creek. An oil/water separator was installed after 1970 when the Creek reportedly was channelized. Based on aerial photographs, the creek was lined between 1976 and 1980. Many of the drains at the site are connected to this separator which empties to the creek. A second washdown area is located at the west part of the site. It is unknown if the drain discharges into the separator, discharges to the storm drain system, or drains directly into the Creek.
5. A septic system and leach field is located south from the hangar. This system was used until the 1970s when a sanitary sewer system reportedly was installed.

6. A concrete pit is located inside the south part of the hangar. The use is unknown, but may have been used as a neutralization pit.
7. A munitions bunker has been located at the center part of the site since the 1950s. Three other bunker-type buildings also were present in this area from the 1950s to early 1970s.
8. Two unidentified buildings were located at the south part of the site from at least 1965 to the early 1970s. These buildings also may have been associated with repair/overhaul, as a military plane was noted next to the buildings in a 1965 aerial photograph.
9. An airport storm drain outlet is located in the fenced vehicle storage area at the center part of the site. A yellowish-green discharge, later identified as containing surfactants, and a heavy build-up of algae was noted at the outlet. Based on EMD's inspection of the outlet, it discharges into the Cucamonga Creek.
10. Two open dirt channels/ditches traverse the site. One runs along the south boundary of the site and reportedly receives surface runoff water from the south part of the airport. The other runs east/west along the south part of the site, north from the GE Test Center facility. Available maps show these channels/ditches discharge to the Cucamonga Creek.
11. Encorp's asbestos survey at the hangar identified asbestos in various floor tile/mastic, boiler insulation, thermal insulation, coating on the interior/exterior of corrugated walls, roofing material, and drywall mud. The majority of these materials were in poor to fair condition. Only the boiler and thermal insulation was identified as friable. LAWA has locked many of the hangar rooms and has placed an asbestos notification on the boiler room. Encorp recommended abatement and/or isolation of asbestos-containing materials.
12. Encorp's lead survey at the hangar identified lead throughout the building with some identified damaged materials. Encorp recommended "that at a minimum interim action measures" be taken for the damaged LBP. CTL found a sample number discrepancy in this section of their report.
13. Encorp's PCB and mercury survey identified PCB-containing light fixtures and suspect mercury-containing fluorescent lights at the hangar. Encorp recommend proper disposal of PCB and mercury-containing fixtures upon renovation or demolition activities.
14. The General Electric (G. E.) Test Cell facility, adjacent to the site on the east, has documented solvent-contaminated soil and groundwater. Three out of four soil areas have been successfully remediated. The RWQCB has identified G. E. as the Potentially Responsible Party (PRP) for the solvent plume that extends southwest from the facility about 8,000 feet.

Recommendations

1. Request status updates from the USACE regarding the release of the "Inventory Project Report." In addition to the areas of concern identified in CTL's conclusions, this report should provide a comprehensive accounting of activities at the site. EMD will request this report.
2. EMD has reviewed the sample number discrepancy identified in Encorps lead survey. Although there is a discrepancy in the starting number for the samples, the results as indicated in the body of the report appear correct.
3. Lead and Asbestos abatement is required for building rehabilitation or demolition. The chance exists that additional suspect ACMs or lead-containing materials may be exposed during demolition and/or renovation activities. Such materials should be sampled and analyzed prior to any renovation and/or demolition activities which disturbs ACMs or lead-containing materials. If airborne lead levels are above OSHA requirements, additional monitoring and respiratory protection may be required as well as engineering controls such as containments and personal protective clothing.
4. Records of proper abandonment of the Underground Storage Tanks onsite were not located. EMD should investigate further with the San Bernardino County Fire Department.
5. The airport Industrial Storm Water Pollution Prevention Plan prohibits non-storm water discharges to the storm drain. EMD is investigating potential sources of the discharge.
6. The washracks, a wastewater clarifier associated with the east washrack, and a sump located inside the hangar should be properly abandoned. EMD has contracted CDM to further investigate storm drains at ONT, including those on the former CANG Hangar site. EMD will make this information available once the report is completed.
7. A copy of this memo should be attached to each copy of the Phase I report prepared by CTL.

Otherwise, no additional environmental investigation is recommended at this time.

Should you have any questions, please contact Steven Durkee or Gary Brown of my staff at 6-3853.

1.0 EXECUTIVE SUMMARY

CTL Environmental Services (CTL) conducted a Phase I Site Assessment for the former California Air National Guard (CANG) facility, Ontario Airport, Ontario, California. The assessment was prepared for Los Angeles World Airports (LAWA) in August 2001. The purpose of the assessment was to identify potential environmental concerns associated with current and previous uses of the site and adjacent properties following the ASTM Standard Practice for Environmental Site Assessments E 1527.

Property Description

At the time of CTL's inspection on August 23, 2001, the northeast part of the site was occupied by an aircraft apron, former small building foundations, an aircraft wash rack, a two-story aircraft hangar with offices, a one-story fire vehicle storage building, a former aircraft fueling pad, a grassy area (identified as the septic system & leach field), and associated asphalt parking areas. The north center and northwest parts of the site were occupied by a former taxiway and dirt areas. A second wash rack was identified along the west boundary of the site. The center part of the site was occupied by a fenced area, containing a munitions bunker and vehicle storage lot, and a large asphalt pad. The south part of the site was occupied by undeveloped land. Two drainage ditches traverse east/west across the south part of the site. An airport storm water discharge drain is located in the fenced area. Avion Place crosses through the site.

Site History

Historical review indicates that the U.S. Army Air Corps was located at the Ontario Airport, including the site, from 1942 to 1947. The Air National Guard then occupied the site until the mid 1980s when ownership reverted to the City of Los Angeles.

Review of available U.S. Army Air Corps/Air National Guard records indicate that the military utilized the site for aircraft repair/overhauls. The northeast part of the site was occupied by a skeet range and bomb storage area in 1946. The existing hangar, fire station, fueling station, and wash rack were constructed in the mid-1950s over the skeet range. During the 1960s, a test cell building and electronic components buildings were built east of the apron. The existing munitions bunker also appears to have been constructed in the 1950s. Other buildings, which appeared to be munitions bunkers, were located in the vicinity of the existing bunker from as early as 1946 to the early 1970s. Two unidentified buildings were noted on the extreme south part of the site from at least 1965 to the early 1970s. An aircraft was noted near these buildings in a 1965 aerial photograph.

The munitions bunker was occupied by Lockheed in the 1990s for storage of ammunition and explosives. The hangar has been most recently occupied by the police department.

On-Site Issues

In assessing on-site concerns, CTL inspected and researched the site for evidence of the current and historical use, release, and/or storage of hazardous materials. Due to the military history at the site, detailed records of activities and operations at the site were limited. According to GillCarlo Gonzalez (USACE), an "Inventory Project Report" has been prepared for the site however, it has not been signed by headquarters and is therefore unavailable for review. Mr. Gonzales stated that this report would provide the most complete accounting of activities at the site.

Chemicals reportedly used at the site included fuel, paint strippers, solvents, etc. Prior to the early 1970s, the aircraft apron and wash rack rinse materials were routed through earth ditches into the Cucamonga Creek. In the 1970s, an oil/water separator and storm drains were installed and connected to the wash rack. The contents still discharged into the Cucamonga Creek which was concrete-lined sometime between 1976 and 1980. Buildings adjacent east from the apron (existing building foundations only) were used for aircraft radar and jeep radio component overhauls. Drains from these buildings also connected to the oil/water separator. An engine test cell, located at the northeast corner of the apron, was used to hot test aircraft engines.

An airport storm drain outlet is located in the fenced vehicle storage area at the center part of the site. A yellowish-green discharge (appeared to be antifreeze) and a heavy build-up of algae was noted at the outlet. Based on available maps, the outlet discharges to the sanitary sewers. The drain runs past the airport maintenance area and the General Electric Facility (northwest from the site) and through the airport runways.

Two open dirt channels/ditches traverse the site. One runs along the south boundary of the site and reportedly receives surface runoff water from the south part of the airport. The other runs east/west along the south part of the site, north from the GE Test Cell facility.

A septic system and leach field are located south from the hangar. This system reportedly was abandoned in the early 1970s when a sewer system was installed.

Past reports have identified six USTs at the site; four USTs in the fueling area and two USTs associated with the boiler. There is discrepancy in the contents of the tanks. A previous consultant identified the tanks and contents as four 25,000-gallon soda water (installed 1963); one 12,000-gallon stove oil (contents unknown; installed possibly 1962), and one 12,000-gallon (contents & installation date unknown). USACE maps identify the contents as JP4 jet fuel and diesel. In 1994, soil analysis for four "former" 25,000-gallon gasoline USTs at the fueling pad and one "former" 10,000-gallon diesel UST near the boiler showed elevated concentrations of total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and xylene at the fueling pad. Records of the removal or soil sampling for the assumed remaining UST was not located by LAWA or CTL through the file searches. Additionally, reports concerning the remediation of the contamination was not found.

Located in the rear room of the hangar was a covered concrete-lined pit that measured approximately 3' x 25' x 20'. A metal ladder extended down into the pit. Based on CTL's prior experience, this may be a neutralization pit (e.g., batteries). Murky water, depth unknown, was observed in the bottom of the pit.

Off-Site Issues

There are three monitoring wells located on the site. One well is located west from the adjacent GE facility in an undeveloped area and the other two wells are located on Avion Place, north from the GE facility. The most recent monitoring results from January 2001 indicate that a solvent plume extends southwest from the GE facility, encompassing the south part of the site, for approximately 8,000 feet. According to Mr. Kamron Saremi, RWQCB, the contamination has been traced to the GE facility and that GE has been identified as the responsible party for this plume.

The US Air Force/Air National Guard have occupied adjacent facilities. Reports indicate that they have acted as a responsible party for cleanup activities.

Non-CERCLA Issues

A "Hazardous Materials Survey Report" was conducted at the site hangar in January 1997 by Encorp (Culver City, CA). The report addressed asbestos-containing materials (ACMs), lead-based paint (LBP), polychlorinated biphenyls (PCBs), and mercury. Discrepancies noted by CTL in the LBP section are that the sample numbers reported in the Analytical Results and the Lead-Based Paint Worksheet (technician personal notes) are not the same as reported in the Map 4 Scitec XRF Data Findings. An error in the sample number appears to have occurred in documenting the very first reading.

Encorp identified asbestos in various floor tile/mastic, boiler insulation, thermal insulation, coating on interior/exterior of corrugated walls, roofing material, and drywall mud throughout the hangar building. The majority of these materials were in poor to fair condition. Only the boiler and thermal insulation was identified as friable. LAWA has locked many of the hangar rooms and has placed an asbestos notification on the boiler room. Encorp recommended abatement and/or isolation of asbestos-containing materials.

Encorp identified lead throughout the hangar building with some materials noted as damaged. Encorp recommended "that at a minimum interim action measures" be taken for the damaged LBP.

Encorp identified PCB-containing light fixtures and suspect mercury-containing fluorescent lights at the hangar. Encorp recommended action upon renovation or demolition activities.

Conclusions

Based on CTL's investigation, this assessment has revealed no evidence of recognized environmental conditions in connection with the site except for the following:

- The site was utilized by the military, Army Air Corps and the Air National Guard, from the early 1940s through the mid 1980s. According to a USACE representative, an "Inventory Project Report" has been prepared for the site however, it has not been signed by headquarters and is therefore unavailable for review. The report reportedly would provide the most complete accounting of activities at the site.
- Six underground tanks have been associated with the site: four tanks at the former fueling pad and two tanks for the boiler units. Soil analysis results from 1994 identified only five USTs. The second UST near the boiler has not been unaccounted for. Elevated concentrations of TPH and BTEX were detected at the fueling pad.
- The military utilized the site for aircraft repair/overhaul as well as aircraft washdown. A USACE report from March 1991, indicated the use of fuel, paint strippers, solvents, etc.
- Prior to 1970s, chemicals and washdown waters were discharged into dirt ditches that emptied into the unlined Cucamonga Creek. An oil/water separator was installed after 1970 when the Creek reportedly was channelized. Based on aerial photographs, the creek was lined between 1976 and 1980. Many of the drains at the site are connected to this separator which empties to the creek. A second washdown area is located at the west part of the site. It is unknown if the drain discharges into the separator, discharges to the storm drain system, or drains directly into the Creek.
- A septic system and leach field is located south from the hangar. This system was used until the 1970s when a sanitary sewer system reportedly was installed.
- A concrete pit is located inside the south part of the hangar. The use is unknown, but may have been used as a neutralization pit.
- A munitions bunker has been located at the center part of the site since the 1950s. Three other bunker-type buildings also were present in this area from the 1950s to early 1970s.
- Two unidentified buildings were located at the south part of the site from at least 1965 to the early 1970s. These buildings also may have been associated with repair/overhaul as a military plane was noted next to the buildings in a 1965 aerial photograph.
- An airport storm drain outlet is located in the fenced vehicle storage area at the center part of the site. A yellowish-green discharge (appeared to be antifreeze) and a heavy build-up of algae was noted at the outlet. Based on available maps, the outlet discharges to the sanitary sewers. The drain runs past the airport maintenance area and the General Electric Facility and through the airport runways.

- Two open dirt channels/ditches traverse the site. One runs along the south boundary of the site and reportedly receives surface runoff water from the south part of the airport. The other runs east/west along the south part of the site, north from the GE Test Cell facility. Available maps show these channels/ditches discharge to the Cucamonga Creek.
- Encorp's asbestos survey at the hangar identified asbestos in various floor tile/mastic, boiler insulation, thermal insulation, coating on interior/exterior of corrugated walls, roofing material, and drywall mud. The majority of these materials were in poor to fair condition. Only the boiler and thermal insulation was identified as friable. LAWA has locked many of the hangar rooms and has placed an asbestos notification on the boiler room. Encorp recommended abatement and/or isolation of asbestos-containing materials.
- Encorp's lead survey at the hangar identified lead throughout the building with some identified damaged materials. Encorp recommended "that at a minimum interim action measures" be taken for the damaged LBP. Note: CTL found a sample number discrepancy in this section of their report.
- Encorp's PCB and mercury survey identified PCB-containing light fixtures and suspect mercury-containing fluorescent lights at the hangar. Encorp recommended action upon renovation or demolition activities.
- GE Test Cell facility, adjacent to the site on the east, has documented solvent-contaminated soil and groundwater. Three out of four soil areas have been successfully remediated. The RWQCB has identified GE as the PRP for the solvent plume that extends southwest from the facility about 8,000 feet.

Recommendations

- Request status updates from the USACE regarding the release of the "Inventory Project Report." In addition to the areas of concern identified in CTL's conclusions, this report should provide a comprehensive accounting of activities at the site.
- LAWA should request clarification from Encorp for the sample number discrepancy in their lead survey.
- The chance exists that additional suspect ACMs or lead-containing materials may be exposed during demolition and/or renovation activities. Such materials should be sampled and analyzed prior to any renovation and/or demolition activities that disturbs the ACM or lead-containing materials. If airborne lead levels are above OSHA requirements, additional monitoring and respiratory protection may be required as well as engineering controls such as containments and personal protective clothing.

2.0 INTRODUCTION

CTL Environmental Services (CTL) conducted a Phase I Site Assessment for the former California Air National Guard (CANG) facility, Ontario Airport, Ontario, California. The assessment was prepared for Los Angeles World Airports (LAWA) in August 2001. The purpose of the assessment was to identify potential environmental concerns associated with current and previous uses of the site and adjacent properties following the ASTM Standard Practice for Environmental Site Assessments E 1527.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The site is located north of Mission Boulevard and east from the Cucamonga Creek, in the City of Ontario, County of San Bernardino, California. The subject site can be found on the Guasti Quadrangle (Topographic Map, 1966 Photorevised 1981) in Section 27, Township 1 South, Range 7 West. The site is located at approximate West Longitude 117° 36' and approximate North Latitude 34° 03'. The site also is depicted as Parcels 7, 8, and a section of Parcel 6 on page 26 and as Parcels 1 and 19 on page 27 in the San Bernardino County Assessor's Mapbook Number 113. The assessor's parcel map and topographic map are reproduced in Appendix A.

3.2 Site and Vicinity Characteristics

Properties in the vicinity of the subject site are commercial and residential. See Section 3.6 for detailed site vicinity description.

3.2.1 General Setting

The site is approximately 900 feet above mean sea level (USGS Topographic Map). The site topography is flat with regional topography generally sloping downward to the south.

The site is located at the southwest part of the Ontario Airport. Major geographic features within the site vicinity include the Cucamonga Creek, located adjacent to the site on the east and the San Bernardino (10) Freeway, located approximately 1.0 mile north from the site.

3.2.2 Geologic Setting

A soil boring log from the adjacent GE Test Cell Facility generally showed silty sand to 10 feet below ground surface (bgs), sand to 25 feet bgs, sand to gravel to 35 feet bgs, silty sand to 60 feet bgs, sand to 90 feet bgs, sand to gravel to 95 feet bgs, sand with some silt to 100 feet bgs, and sand to 110 feet bgs. (Dames & Moore; GEAE Test Cell Facility; 3/96).

3.2.3 Hydrology

The site is located in the Chino Basin. Groundwater information from the City of Ontario and reports from nearby contaminated facilities indicate that groundwater is in excess of 250 feet below ground surface and flows to the south/southwest.

3.3 General Description of Structures/Improvements to Property

At the time of CTL's inspection on August 23, 2001, the northeast part of the site was occupied by an aircraft apron, former small building foundations, an aircraft wash rack, a two-story aircraft hangar with offices, a one-story fire vehicle storage building, a former aircraft fueling pad, a grassy area (identified as the septic system & leach field), and associated asphalt parking areas. The north center and northwest parts of the site were occupied by a former taxiway and dirt areas. A second wash rack was identified along the west boundary of the site. The center part of the site was occupied by a fenced area, containing a munitions bunker and vehicle storage lot, and a large asphalt pad. The south part of the site was occupied by undeveloped land. Two drainage ditches traverse east/west across the south part of the site. An airport storm water discharge drain is located in the fenced area. Avion Place crosses through the site. A site and vicinity map is provided in Appendix A.

3.4 Specialized Knowledge

No specialized knowledge or experience that is material to recognized environmental conditions in connection with the property has been reported to CTL.

3.5 Current Usage of the Property

At the time of CTL's investigation, the airport stored abandoned cars and broken airport vehicles in the fenced area and stored emergency fire equipment in the former fire station. The munitions bunker and aircraft hangar were vacant.

3.6 Current Usage of Adjacent Properties

CTL conducted a reconnaissance of properties adjacent to the site to evaluate their actual or potential impact to the site. Surrounding businesses/properties are as follows:

North: Airport Taxiways
South: Railroad spurs with East Mission Blvd and warehouse/offices beyond
East: GE Test Cell facility, Across Cucamonga Creek – Former Air National Guard, Control Tower, Airport Safety offices
West: LAWA Maintenance facility, aircraft hangars

4.0 RECORDS REVIEW

Several local and State regulatory agencies were contacted by CTL to obtain information in regard to previous land use (s), structures, underground tanks/pipelines, and any other information pertinent to the site. The findings are summarized below.

4.1 Historic Information

Historical review indicates that the U.S. Army Air Corps was located at the Ontario Airport, including the site, from 1942 to 1947. The Air National Guard then occupied the site until the mid 1980s when ownership reverted to the City of Los Angeles.

Review of available U.S. Army Air Corps/Air National Guard records indicate that the military utilized the site for aircraft repair/overhauls. The northeast part of the site was occupied by a skeet range and bomb storage area in 1946. The existing hangar, fire station, fueling station, and wash rack were constructed in the mid-1950s over the skeet range. During the 1960s, a test cell building and electronic components buildings were built east of the apron. The existing munitions bunker also appears to have been constructed in the 1950s. Other buildings, which appeared to be munitions bunkers, were located in the vicinity of the existing bunker from as early as 1946 to the early 1970s. Two unidentified buildings were noted on the extreme south part of the site from at least 1965 to the early 1970s. An aircraft was noted near these buildings in a 1965 aerial photograph.

The munitions bunker was occupied by Lockheed in the 1990s for storage of ammunition and explosives. The hangar has been most recently occupied by the police department.

4.1.1 Site Records Review

CTL visited the City of Ontario Building Department to obtain site records. Building permits associated with the on-site structures were not found.

Information pertaining to site history/activities were collected from the County of San Bernardino Fire Department, United States Army Corps of Engineers (USACE), the internet (CANG websites), and LAWA. According to GillCarlo Gonzalez (USACE), an "Inventory Project Report" has been prepared for the site however, it has not been signed by headquarters and is therefore unavailable for review. Mr. Gonzales stated that this report would provide the most complete accounting of activities at the site. The information summarized in the following paragraphs pertains to the 27.41 acres of the site formerly occupied by the National Guard Training Site (NGTS) unless otherwise noted. Maps and reports are presented in Appendices E & F, respectively.

Maps

February 1946 – The north part of the site (27.41 acre) was occupied by a skeet range and three unidentified buildings (possibly bomb storage or munitions storage based on reports). The west center part of the site (southwest from the 27.41 acre parcel) was occupied by numerous small, unidentifiable buildings (possibly munitions bunkers).

Late 1950s – The site was occupied by the existing hangar, the crash/fire station, an aircraft fuel system (east from the hangar), and an aircraft wash rack.

1961 - The site was occupied by the existing hangar, the crash/fire station, an aircraft fuel system (east from the hangar), and an aircraft wash rack. An aircraft parking apron was located north from the hangar.

August 15, 1991 - The site was occupied by the existing hangar with an addition to the southwest corner, the fire station, an aircraft fueling area (east from the hangar), an aircraft wash rack, a munitions pad, electrical component shop, the aircraft apron, and an engine test cell building (NE corner). Diesel tanks were noted near the boiler room at the south end of the hangar and JP-4 tanks were noted in the fueling area. A septic tank and a leach field were designated adjacent to the south of the fueling area.

Reports

July 1988 – “Phase I Environmental Audit Final Report” prepared by Camp Dresser & McKee (CDM). Areas of possible contamination identified included USTs, dump (unknown materials disposed of in airport property), wash racks (unknown materials discharged), septic tanks, old fire fighter drill pit. A grease and wash rack at the motor and truck repair facility located at the Lockheed Air Terminal (LAT) maintenance yard may have discharged into an open channel (that flows east-west across the site) and into the Cucamonga Creek. Six USTs identified at the site included: four 25,000-gallon soda water (installed 1963); one 12,000-gallon stove oil (contents unknown; installed possibly 1962), one 12,000-gallon (contents & installation date unknown).

May 1990 – “Summary Trip Report.” The site hangar is designated as Building No. 8. Two abandoned heating oil tanks are located outside of the boiler room. Four 25,000-gallon tanks are located east from the building. Two of the tanks contain a pickled sodium hydroxide solution. The contents of the other two tanks were not reported. The tanks were scheduled for removal by the airport.

March 1991 - "Site Visit DERP Preliminary Assessment National Guard Training Site..." Reportedly, fuel, paint strippers, solvents, etc. were discharged through the wash rack to the Cucamonga Creek. Prior to the early 1970s, earth ditches drained the aircraft apron and wash rack to the Creek. Post 1970, an oil/water separator and storm drains were connected to the wash rack; the Creek also was channelized at that time. Buildings adjacent east of the apron were used for aircraft radar and jeep radio component overhauls. Drains from these buildings also connected to the oil/water separator. An engine test cell, located at the northeast corner of the apron, was used to hot test aircraft engines. The septic tank and leach field reportedly were abandoned in the early 1970s and a sewer system was installed. It was reported that wells south from the airport were contaminated with solvents. The USACE was drafting a Preliminary Assessment for the site which would recommend removal of on-site USTs and remedial investigation of site areas with potential solvent-contaminated soil/groundwater. LAWA consultant at the time, CDM, indicated to the USACE that LAWA would have the USTs removed. General Electric, Aerojet, Lockheed, and General Dynamics were noted as Potential Responsible Parties at the airport. An earth channel that conveys storm water from the majority of the south part of the airport, including runways and an industrial park where Lockheed and GE were located, was noted to run along the south border of the airport and intersect with the Creek.

August 31, 1995 - Project Fact Sheet. The site formerly was used by the Air National Guard that included a skeet range (currently covered by runway/taxiway) and bomb storage areas.

December 1994 - Analytical soil results for USTs located at the former fueling pad and near the boiler room. Four "Former" 25,000-gallon gasoline USTs, identified as Tanks 5-8, were mapped at the fueling pad. Soil results showed elevated concentrations of total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and xylene (BTEX). One "Former" 10,000-gallon diesel UST was mapped just west from the boiler room. Soil result were non detect for TPH and BTEX. Note: This reports accounts for five USTs. Based on the other reports, there is another UST in the vicinity of the boiler.

4.1.2 Review of Historic Fire Insurance Maps

Fire Insurance maps from the City of Ontario Library were reviewed for the site and adjacent properties. Maps that included the site were not found.

4.1.3 Review of Historic Topographic Maps

Maps are presented in Appendix E.

- The 1953 map did not show any structures at the subject site to be undeveloped. The existing railroad spurs, adjacent to the south, and the Cucamonga Creek, adjacent to the east, were noted. The Ontario Airport was developed northwest from the site. The California Air National Guard (CANG) was adjacent to the east, across the Cucamonga Creek and to the south.
- The 1966 map showed the existing site hangar and fire station. The north part of the site appeared to be a taxiway onto the Ontario Airport. The airport had expanded to the east and was further developed with buildings. Additional buildings were observed at the CANG facility.
- The 1966 map photorevised 1973 showed a small building northeast from the existing hangar. The remainder of the site appeared unchanged. Buildings were noted at the adjacent GE facility and CANG.
- The 1966 map photorevised 1981 showed no changes from the 1973 map.

4.1.4 Review of Aerial Photographs

Aerial photographs from LAWA, Continental Aerial, the City of Ontario Planning Department, and the City of Ontario Main Library were reviewed for evidence of hazardous materials and features that may have impacted the subject property. These features included, but were not limited to, landfills, ponds, pits, aboveground storage tanks, lagoons, exterior storage of hazardous materials, and general land use. Specific observations are presented below by photographic date. Available photographs are presented in Appendix D.

- The site appeared to be undeveloped in 1949. The airport was noted northwest from the site. The Cucamonga Creek was adjacent east from the site. The surrounding area, with the exception of the airport, was a mix of undeveloped land and orchards.
- The 1959 photograph showed the 24.71 acres section of the site to be occupied by, from north to south, the aircraft apron, the wash rack, the fire station, the hangar, the fueling pad, and a grass area (location of the septic tank and leach field). The site area adjacent to the west was occupied by a taxiway and grass area. The site area south from Avion Place was occupied by four small buildings and undeveloped land. The CANG buildings were observed east and south from the site. The airport had extended their runways further to the east.

- The 1965 photograph showed the addition of a small building at the northeast corner of the aircraft apron (engine test cell building), two buildings at the southeast corner of the apron (electrical components), and two small buildings and a plane at the extreme south part of the site along Mission Boulevard. Other changes at the site were not apparent. The airport facilities were expanding to the south and further east.
- The 1967 photograph showed a funnel-shaped pad at the northeast area of the apron. The base of the pad abutted the adjacent Cucamonga Creek that was observed to be unlined. Numerous small storage units/sheds were noted along the east side of the site. An unlined east/west channel was noted across the south part of the site.
- The 1970 photograph showed no apparent changes at the site.
- The 1974 photograph showed the two buildings at the south part of the site to be gone. Only one of the four buildings were noted at the site area south from Avion Drive. This appears to be the existing munitions bunker.
- The 1976 photograph showed an additional building at the southeast corner of the aircraft apron. Many of the small sheds at the east side of the site were gone. A tall barricade was observed at the base of the funnel-shaped pad. The Creek remained unlined.
- The 1980 photograph showed the airport property north from the site to be under grading operations. The Creek appeared to be lined. Other changes at the site or in the surrounding area were not apparent.
- The 1986 photograph showed no military activity at the site.
- The 1994 photograph showed the buildings at the east side of the site to be gone. Four pump islands were still noted in the former fueling area.

4.2 Standard Environmental Record Sources Review

Regulatory information was compiled by VISTA Environmental Information (VISTA; Herndon, Virginia). The report included the Federal NPL, TSD, RCRA Transporters, CERCLIS, CORRACTS, RCRA Generators, and ERNS lists and the State SWLF, LUST, Cortese, CALSITES, Registered UST, and AWP lists. The complete Vista report is reproduced in Appendix B.

Many of the listed facilities reported on "Ontario Airport" are listed as adjacent facilities. These facilities maybe further away than reported. CTL has adjusted some of the distances/directions based upon maps and historical information.

4.2.1 National Priorities List (NPL)

The United States Environmental Protection Agency's (US EPA's) NPL was reviewed to ascertain if known "hazardous waste" facilities that have been targeted for cleanup under Superfund are located within a 1.0 mile radius from the site. **No facilities were listed.**

4.2.2 State Superfund Sites

The California Environmental Protection Agency's (Cal EPA's) Department of Toxic Substance Control (DTSC) List of Annual Workplan Sites was reviewed to ascertain if known contaminated properties which are designated by the State for remediation, are within a 1.0-mile radius from the site. **One facility was listed.**

Facility Name/Address	Distance/Direction	Hydrologic Setting	Status
General Electric Co. 2264 Avion Drive	Adjacent to east ¹	Crossgradient	See following paragraph.

¹Based on CTL's research

GE has been actively treating contaminated soil through an extraction system. Three out of four contaminated areas have been successfully remediated. Earth Tech completed the most recent groundwater monitoring results in January 2001. The results indicate that a solvent plume extends southwest from the GE facility, encompassing the south part of the site, for approximately 8,000 feet.

According to Mr. Kamron Saremi, RWQCB, the contamination has been traced to GE facility and that GE has been identified as the responsible party for this plume.

4.2.3 Corrective Actions (CORRACTS) Facilities

US EPA's Resource Conservation Recovery Act (RCRA) Corrective Actions (CORRACTS) facilities list was researched for facilities within a 1.0-mile radius from the site. **One facility was listed.**

Facility Name/Address	Distance/Direction	Hydrologic Setting	Status
GE Co. Engine W. Coast Ops. 1923 E. Avion	0.16 mile west	Crossgradient	Low corrective action priority Reports indicate that soil contamination is being remediated.

Based on the status, distance, and/or direction of this facility, it is not a present risk to impact the subject site.

4.2.4 Treatment, Storage, and Disposal (TSD) Facilities

US EPA's Resource Conservation Recovery Act (RCRA) NON-CORRACTS TSD facilities list was researched for facilities within a 0.5-mile radius from the site. **No facilities were listed.**

4.2.5 Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

The US EPA's CERCLIS list was researched for facilities which are either proposed to be included, or are on the NPL list and for facilities in the screening and assessment phase for possible incorporation on the NPL within a 0.5-mile radius from the site. **Three facilities were listed.**

Facility Name/Address	Distance/Direction	Hydrologic Setting	Status
Pacific Airmotive Ontario Airport	Over 0.10 mile ¹	NA	No Further Remedial Action Planned (NFRAP)
GE Aviation Services 1932 E. Avion Ave.	0.16 mile west	Crossgradient	No Further Remedial Action Planned (NFRAP)
Power Flow Battery 5312 Mission Blvd.	0.12 mile south	Downgradient	No Further Remedial Action Planned (NFRAP)

¹Based on CTL's research

Based on the status, distance, and/or direction of these facilities, they are not a present risk to impact the subject site.

4.2.6 Landfill Sites

The State, County, and Regional lists for solid waste, landfills, and transfer stations facilities were researched within a 0.5-mile radius from the site. **No facilities were reported.**

4.2.7 Leaking Underground Storage Tank (LUST)

The Regional Water Quality Control Board's (RWQCB's) list of leaking underground tanks was researched to identify facilities that had leaking underground storage tanks within a 0.5-mile radius from the site. **Six facilities were reported.**

Facility Name/Address	Distance/Direction	Hydrologic Setting	Impacted Media	Status
Avis Ontario Airport	0.75 mile north ¹	Crossgradient	Soil	Case Closed
Lockheed 2411 Ontario Airport	0.50 mile north ¹	Crossgradient	Soil	Case Closed
Lockheed Air Terminal 988 Ontario Airport	0.50 mile north ¹	Crossgradient	Soil	Case Closed
CA Air Nat'l Guard Taxiway 62	0.2 mile north	Crossgradient	Soil	Case Closed
Fluor 1150 Vineyard	0.35 mile west	Crossgradient	Soil	Case Closed
GE Test Cell 2264 Avion	Adjacent south & east	Crossgradient	Aquifer	Plume identified with GE named as a PRP. See 4.2.2

¹Based on CTL's research

Based on the status, distance/direction, and/or impacted media of the first five facilities, they are not a present risk to impact the site. GE has impacted the groundwater beneath the site.

4.2.8 CORTESE

The State CORTESE database, maintained by the State Office of Planning and Research, was researched to locate contaminated properties within a 0.5-mile radius from the site. Two facilities, Lockheed and GE, also listed on the LUST list, were reported.

Based on the status, distance and/or direction of Lockheed, as reported in Section 4.2.7, it is not a present risk to impact the site. GE is a PRP for groundwater contamination that extends beneath the site.

4.2.9 CALSITES

The Cal EPA DTSC's CALSITES list was reviewed for facilities within a 0.5-mile radius from the site. **Three facilities were reported.**

Facility Name/Address	Distance/Direction	Hydrologic Setting	Status
Air National Guard 2500 Jurupa St.	Adjacent to east	Crossgradient	Certified (i.e., no further action)
Pacific Airmotive Ontario Airport	Over 0.10 mile ¹	Crossgradient	Referred to Other Agency – A listed CERCLIS facility with a NFRAP status
Power Flow Battery 5312 Mission Blvd.	0.12 mile south	Downgradient	Referred to Other Agency – A listed CERCLIS facility with a NFRAP status

Based on the status, distance, and/or direction of these facilities, they are not a present risk to impact the subject site.

4.2.10 Registered Underground and Aboveground Storage Tanks

The State Water Resource Control Board's (SWRCB's) list of registered underground and aboveground storage tanks was researched for the site and contiguous/adjacent properties. **Three facilities were listed.**

Facility Name/Address	Distance/Direction	Hydrologic Setting	Status
Mercury Air 2161 Avion	Adjacent west	Crossgradient	# of tanks not listed No violations reported
Beechcraft West 2161 Avion	Adjacent west	Crossgradient	7 USTs listed No violations reported
CANG 2500 Jurupa	Adjacent east	Crossgradient	7 USTs listed A Calsites Certified facility

Based on the status, distance, and/or direction of these facilities, they are not a present risk to impact the subject site.

4.2.11 RCRA Generators

The US EPA RCRA list of large and small quantity generators was researched for site and contiguous/adjacent facilities. **Two facilities were listed.**

Facility Name/Address	Distance/Direction	Hydrologic Setting	Status
USAF Air National Guard	Adjacent to east	Crossgradient	Small/Large Quantity Generator
GE Engine 2264 Avion	Adjacent to east	Crossgradient	Large Quantity Generator

USAF, also identified as CANG, is a Calsites Certified facility. GE is a PRP for groundwater contamination that extends beneath the site.

4.2.12 Emergency Response Notification System of Spills (ERNS)

The US EPA's ERNS list was reviewed for the site. **The site was not listed.**

5.0 SITE INSPECTION

The site was inspected on August 23, 2001 by CTL employee Constance Allen, Project Manager. Ms. Allen was guided through the site by Mr. Steven Durkee, LAWA. Site photographs are reproduced in Appendix C.

5.1 Site Description

5.1.1 Description of Property and Improvements

At the time of CTL's inspection, the northeast part of the site was occupied by an aircraft apron, former small building foundations, a staging area previously used to wash aircraft, a two-story aircraft hangar with offices, a one-story emergency fire department equipment storage building, a former aircraft fueling pad, a grassy area, and associated asphalt parking areas. The north center and northwest parts of the site were occupied by a former taxiway and dirt areas. The center part of the site was occupied by a fenced area, containing a munitions bunker and vehicle storage lot, and a large asphalt pad. The south part of the site was occupied by undeveloped land. Two drainage ditches traverse east/west across the south part of the site. An airport storm water discharge drain is located in the fenced area. Avion Place crosses through the site.

A map for the emergency fire department equipment storage building showed that the building previously was occupied by a bay area, an oil room, a kitchen, "A/C Maintenance," avionics, and offices.

The hangar consists of first and second floor rooms located around the perimeter, a shop area extending from the southwest corner of the hangar, and an exterior boiler room.

5.1.2 Mechanical Systems

The boiler room and many of the other hangar rooms were inaccessible at the time of CTL's investigation due to asbestos issues. No equipment was noted in the areas inspected.

5.1.3 Potable Water Supply

Water is supplied to the site by the City of Ontario. The most recent Annual Water Quality Report, dated 2000, documented that all water supplies meet or exceed State and Federal standards for drinking water quality.

5.1.4 Wells

Based on a plot map in a December 1995 Quarterly Groundwater Monitoring Report prepared by Dames & Moore, there are three monitoring wells located on the site. Two wells are located on Avion Place, north from the adjacent GE facility and the other is located west from the GE facility in an undeveloped area. Earth Tech completed the most recent monitoring results in January 2001. The results indicate that a solvent plume extends southwest from the GE facility, encompassing the south part of the site, for approximately 8,000 feet. According to Mr. Kamron Saremi, RWQCB, the contamination has been traced to the GE facility and that GE has been identified as the responsible party for this plume.

5.1.5 Wastewater

General wastewater from the hangar and fire building most likely discharged to the septic system/sewer system located south from the hangar. Also see Section 5.1.10.

5.1.6 Pools of Liquid

Pools of liquid were not observed by CTL at the site.

5.1.7 Solid Waste Disposal

There is no current trash collection at the site. CTL did not observe any areas of unauthorized dumping.

5.1.8 Ponds and Lagoons

Pits, ponds or lagoons were not observed at the site during the field investigation.

5.1.9 Septic Systems

A septic system was identified in the grassy area south from the hangar. This system reportedly was abandoned in the 1970s and a sanitary sewer system was installed. Available documents did not indicate that hazardous materials were discharged to the septic system.

5.1.10 Pits

Located in the rear room of the hangar was a covered concrete-lined pit that measured approximately 3' x 25' x 20'. A metal ladder extended down into the pit. Based on CTL's prior experience, this may be a neutralization pit (e.g., batteries). Murky water, depth unknown, was observed in the bottom of the pit.

5.1.11 Floor Drains, Sumps, and Clarifiers

Long grated floor drains for surface waters were located at roll-up door to the fire station building, the sliding doors at the entrance to the hangar, and in the center of the hangar. A floor drain also was noted in the fire station. It is unknown where this drain discharges.

A two-stage clarifier (oil/water separator) is located northeast from the hangar. Water from the aircraft apron, wash rack, and drains from former buildings adjacent east of the apron, reportedly discharged to the separator. A wash rack also was observed on the east side of the site. The outlet of this drain is unknown but may connect to the storm drain system that discharges to the separator or directly to the Cucamonga Creek.

5.1.12 Storm Drains and Open Channels/Ditches

An airport storm drain outlet is located in the fenced vehicle storage area at the center part of the site. A yellowish-green discharge (appeared to be antifreeze) and a heavy build-up of algae was noted at the outlet. Based on available maps, the outlet discharges to the sanitary sewers. The drain runs past the airport maintenance area and the General Electric Facility and through the airport runways.

Two open dirt channels/ditches traverse the site. One runs along the south boundary of the site and reportedly receives surface runoff water from the south part of the airport. The other runs east/west along the south part of the site, north from the GE Test Cell facility. Available maps show these channels/ditches discharge to the Cucamonga Creek.

5.2 Storage of Chemicals or Hazardous Materials

A 1995 inventory list and permit for Lockheed Aircraft was posted on the interior of the munitions bunker. The permit, issued by the City of Ontario Fire Safety Control Bureau, indicated storage of explosives or blasting agents. The inventory list identified ammunition, explosives, and equipment parts.

Previous reports identified the historical use of fuel, paint strippers, and solvents at the hangar by the Air National Guard.

CTL's site inspection revealed a partially full 25-gallon drum of sodium hydroxide near the outside southeast corner of the hangar. Two 5-gallon containers (unidentified contents) were located in the shop area.

5.3 Storage Tanks

Past reports have identified six USTs at the site; four USTs in the fueling area and two USTs associated with the boiler. There is discrepancy in the contents of the tanks. CDM identified the tanks and contents as four 25,000-gallon soda water (installed 1963); one 12,000-gallon stove oil (contents unknown; installed possibly 1962), and one 12,000-gallon (contents & installation date unknown). USACE maps identify the contents as JP4 jet fuel and diesel. Analytical results conducted in 1994 for five "former" USTs denoted the contents as gasoline and diesel. Records of the removal or soil sampling for the assumed remaining UST was not located by LAWA or CTL through the file searches. Additionally, reports concerning the remediation of the contamination was not found. See Section 4.1.1.

5.4 Polychlorinated Biphenyls (PCBs)

A pad-mounted transformer, reportedly disconnected, is located outside the south end of the hangar. The unit was not labeled as a "Non-PCB" unit. Other potential PCB-containing materials were identified at the site by Encorp (Culver City, CA). See Section 6.0.

5.5 Evidence of Environmental Concern

5.5.1 Stained Soil, Pavement, and Concrete

Areas of notable stained soil, pavement, or concrete was not observed at the site.

5.5.2 Stressed Vegetation

The vegetation at the site showed no signs of abnormal biological stress, a common indicator of subsurface contamination during the site investigation.

5.5.3 Drums

See Section 5.2.

5.5.4 Air Quality

CTL did not observe any indication of air quality distortion (i.e. discernible odors) during the site investigation.

6.0 NON-CERCLA ISSUES

A "Hazardous Materials Survey Report" was conducted at the site hangar in January 1997 by Encorp (Culver City, CA). The report addressed asbestos-containing materials (ACMs), lead-based paint (LBP), polychlorinated biphenyls (PCBs), and mercury. Discrepancies noted by CTL in the LBP section are that the sample numbers reported in the Analytical Results and the Lead-Based Paint Worksheet (technician personal notes) are not the same as reported in the Map 4 Scitec XRF Data Findings. An error in the sample number appears to have occurred in documenting the very first reading. Material Summary tables for these materials is presented in the following pages. CTL summarized the positive XRF results only as documented by the Lead-Based Paint Worksheet.

Asbestos-Containing Materials Material Summary

Material	Location	Friable	Condition
Green Floor Tile	Rooms, 1, 21, 23	No	Poor
Brown W/Red & White Floor Tile/Mastic	Various	No	Poor – Fair
Tan Floor Tile/Mastic	Room 20	No	Poor
Green Mixed Floor Tile/Mastic	Room 16	No	Fair
Dark Brown Floor Tile/Mastic	Rooms 3, 6, 7	No	Poor
Off-White Floor Tile/Mastic	Room 33	No	Fair
Pipe & Elbow Thermal Insulation	Throughout Facility, Restrooms, Boiler Room	Yes	Poor – Good
Boiler Insulation	Boiler Room	Yes	Poor
Tank Insulation	Boiler Room	Yes	Fair
Inside Boiler Thermal Insulation	Boiler Room	Yes	Poor – Fair
Coating On Interior/Exterior Of Corrugated Walls	Throughout Facility	No	Poor
Roofing Material	Roof Over Offices & Boiler Room	No	Fair – Good
Tan Floor Tile/Mastic	Boiler Room Office	No	Poor
Pale Green Floor Tile/Mastic	Motorcycle Shop	No	Poor
Drywall Mud	Various Locations	No	Poor

XRF Lead-Based Paint Material Summary

Sample Location	Paint Color	Substrate	Condition	Lead Content (mg/cm ²)
Motorcycle Shop - I-Beam On Wall	Dark Gray	Metal	Good	3.23
Motorcycle Shop - Ceiling	Beige	Metal	Good	1.42
Motorcycle Shop – Exterior Wall	White	Metal W/Coating	Good	0.88
Motorcycle Shop – Exterior Door	White	Metal W/Coating	Good	0.87
Main Hangar – Exterior Wall	White	Metal W/Coating	Damaged	3.75
To The Right Of Exterior Hangar Door	White	Metal W/Coating	Damaged	5.48
Main Hangar Near Rm #19 – Metal Cross Beam	Light Blue	Metal	Good	9.78
Main Hangar Near Rm #19 – Metal Cross Beam	Beige	Metal	Good	9.30
Inside At Door #20 - Door	Dark Brown	Metal	Good	0.84
I-Beam Near Door #20	Light Blue	Metal	Good	11.73
I-Beam Near Door #20	Beige	Metal	Good	8.85
I-Beam Near Door #20	Red	Metal	Good	13.27
Electrical Box Near Rm #20	Dark Blue	Metal	Good	1.0
Telephone Cabinet Near #15	Dark Blue	Metal	Good	2.37
Fire Hose Cabinet Near #15	Red	Metal	Good	1.34
Fire Door Near Rm 15	Light Blue	Metal	Good	1.41
Door To Rm 14	Light Blue	Metal	Good	1.44
Door To Rm 12	Light Blue	Metal	Good	2.16
SE Stairwell Door	Light Blue	Metal	Good	2.58
Inside Door To 2 nd Floor At SE Stairwell	Dark Brown	Metal	Good	1.38
Outside Door To 2 nd Floor At SE Stairwell	Dark Brown	Metal	Good	1.73
2 nd Floor Side Railing	Light Blue	Metal	Damaged	1.3
2 nd Floor Top Of Railing	Dark Blue	Metal	Damaged	2.61
NW Side Of Hangar Door Wall	Beige	Metal W/Coating	Damaged	2.18
Inside Of Hangar Door	Light Blue	Metal	Good	1.37

XRF Lead-Based Paint Material Summary (Cont.)

Sample Location	Paint Color	Substrate	Condition	Lead Content (mg/cm ²)
Ladder	Tan	Metal	Damaged	16.58
Door Jamb on Garage Door	White	Metal	Good	9.54
Vent pipe near boiler room	Silver	Metal	Good	5.83
Window moldings	White	Metal	Good	1.47
Outside I-Beam	White	Metal	Good	0.98

PCB and Mercury Summary

PCBs – Approximately 650 PCB-containing light ballasts were identified.

Mercury – Approximately 600 suspect mercury-containing fluorescent light bulbs were identified.

7.0 CONCLUSIONS AND RECOMMENDATIONS

7.1 Conclusions

CTL Environmental Services has conducted a Phase 1 Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of the California Air National Guard (CANG) facility, Ontario Airport, Ontario, California. Any exceptions to, or deletions from, this practice are described in Section 8.1 of this report.

Based on CTL's investigation, this assessment has revealed no evidence of recognized environmental conditions in connection with the site except for the following:

- The site was utilized by the military, Army Air Corps and the Air National Guard, from the early 1940s through the mid 1980s. According to a USACE representative, an "Inventory Project Report" has been prepared for the site however, it has not been signed by headquarters and is therefore unavailable for review. The report reportedly would provide the most complete accounting of activities at the site.
- Six underground tanks have been associated with the site: four tanks at the former fueling pad and two tanks for the boiler units. Soil analysis results from 1994 identified only five USTs. The second UST near the boiler has not been unaccounted for. Elevated concentrations of TPH and BTEX were detected at the fueling pad.
- The military utilized the site for aircraft repair/overhaul as well as aircraft washdown. A USACE report from March 1991, indicated the use of fuel, paint strippers, solvents, etc.
- Prior to 1970s, chemicals and washdown waters were discharged into dirt ditches that emptied into the unlined Cucamonga Creek. An oil/water separator was installed after 1970 when the Creek reportedly was channelized. Based on aerial photographs, the creek was lined between 1976 and 1980. Many of the drains at the site are connected to this separator which empties to the creek. A second washdown area is located at the west part of the site. It is unknown if the drain discharges into the separator, discharges to the storm drain system, or drains directly into the Creek.
- A septic system and leach field is located south from the hangar. This system was used until the 1970s when a sanitary sewer system reportedly was installed.
- A concrete pit is located inside the south part of the hangar. The use is unknown, but may have been used as a neutralization pit.

- A munitions bunker has been located at the center part of the site since the 1950s. Three other bunker-type buildings also were present in this area from the 1950s to early 1970s.
- Two unidentified buildings were located at the south part of the site from at least 1965 to the early 1970s. These buildings also may have been associated with repair/overhaul as a military plane was noted next to the buildings in a 1965 aerial photograph.
- An airport storm drain outlet is located in the fenced vehicle storage area at the center part of the site. A yellowish-green discharge (appeared to be antifreeze) and a heavy build-up of algae was noted at the outlet. Based on available maps, the outlet discharges to the sanitary sewers. The drain runs past the airport maintenance area and the General Electric Facility and through the airport runways.
- Two open dirt channels/ditches traverse the site. One runs along the south boundary of the site and reportedly receives surface runoff water from the south part of the airport. The other runs east/west along the south part of the site, north from the GE Test Cell facility. Available maps show these channels/ditches discharge to the Cucamonga Creek.
- Encorp's asbestos survey at the hangar identified asbestos in various floor tile/mastic, boiler insulation, thermal insulation, coating on interior/exterior of corrugated walls, roofing material, and drywall mud. The majority of these materials were in poor to fair condition. Only the boiler and thermal insulation was identified as friable. LAWA has locked many of the hangar rooms and has placed an asbestos notification on the boiler room. Encorp recommended abatement and/or isolation of asbestos-containing materials.
- Encorp's lead survey at the hangar identified lead throughout the building with some identified damaged materials. Encorp recommended "that at a minimum interim action measures" be taken for the damaged LBP.
- Encorp's PCB and mercury survey identified PCB-containing light fixtures and suspect mercury-containing fluorescent lights at the hangar. Encorp recommended action upon renovation or demolition activities.
- GE Test Cell facility, adjacent to the site on the east, has documented solvent-contaminated soil and groundwater. Three out of four soil areas have been successfully remediated. The RWQCB has identified GE as the PRP for the solvent plume that extends southwest from the facility about 8,000 feet.

7.2 Recommendations

Based on the foregoing conclusions, CTL recommends the following:

- Request status updates from the USACE regarding the release of the "Inventory Project Report." In addition to the areas of concern identified in CTL's conclusions, this report should provide a comprehensive accounting of activities at the site.
- LAWA should request clarification from Encorp for the sample number discrepancy in their lead survey.
- The chance exists that additional suspect ACMs or lead-containing materials may be exposed during demolition and/or renovation activities. Such materials should be sampled and analyzed prior to any renovation and/or demolition activities which disturbs ACMs or lead-containing materials. If airborne lead levels are above OSHA requirements, additional monitoring and respiratory protection may be required as well as engineering controls such as containments and personal protective clothing.

8.0 SPECIAL TERMS AND CONDITIONS

This Phase I Environmental Site Assessment has been prepared for the exclusive use of the Los Angeles World Airports. CTL will distribute any information regarding this assessment and report only upon the request of Los Angeles World Airports.

8.1 Limitations and Exceptions of Assessment

CTL has performed this assessment in accordance ASTM Standard Practice for Environmental Site Assessments E 1527.

8.2 Limiting Conditions and Methodology Used

This report is based upon data and information obtained during the site visit performed by CTL personnel to the property identified herein and is based solely upon the condition of the property on the date of such inspection, supplemented by information and data obtained by CTL from other sources and described herein. The evaluation and conclusions contained in this report have been prepared in light of the expertise and experience of CTL. However, in evaluating the property, CTL has relied in good faith upon representations and information furnished by individuals noted in the report with respect to operations and existing property conditions and the historic uses of the property to the extent that they have not been contradicted by data

obtained from other sources. Accordingly, CTL accepts no responsibility for any deficiency, misstatements, omissions, misrepresentations, or fraudulent acts of persons interviewed. In addition, CTL will not accept liability for any loss, injury, claim or damage arising directly or indirectly from any use or reliance on this report.

This assessment included a visual investigation of the subject site and surrounding areas, a historical review of the subject property, interviews with the site tenants, contacts with personnel representing regulatory agencies, and obtaining various documentary records relative to the site.

CTL has performed this work, made findings, and proposed recommendations described in this report in accordance with the ASTM Standard Practice for Environmental Site Assessments E 1527. This warranty stands in lieu of all other warranties, expressed or implied. While this report can be used as a guide, it must be understood that it is neither a rejection nor an endorsement of the property.

9.0 STATEMENT OF INDEPENDENCE

CTL Environmental Services is a privately-held company and is not affiliated with any financial institution or other corporate entity. CTL Environmental Services is retained as an independent contractor to provide objective, impartial investigatory or analytical services regarding environmentally regulated hazardous or toxic materials.

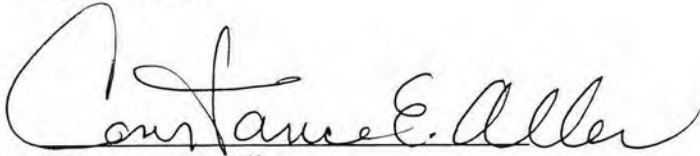

CTL has no present or contemplated future ownership interest or financial interest in the real estate that is the subject of this Environmental Assessment Report; and CTL has no personal interest with respect to the subject matter of the Environmental Assessment Report or the parties involved and CTL has no relationship with the property or the owners thereof which would prevent an independent analysis of the environmental or other conditions of the property.

10.0 STATEMENT OF QUALIFICATIONS

This Phase I Environmental Site Assessment was prepared by CTL employee, Constance E. Allen, Project Manager.

RE: GE Engine Service Inc. Lease Modification

Dear Robin,

Enclosed please find copies of the Phase I Environmental Site Assessment, Asbestos and Lead Survey, and Asbestos Closure Report for the buildings and property of Ontario International Airport, Parcel 3, formally referred to as GE Hanger 4. A final walk-thru of the property was conducted on December 17, 2002 with representatives of the airport and GE.

The Asbestos and Lead Survey was conducted according to U.S. EPA, South Coast Air Quality Management District, U. S. Department of Housing and Urban Development, and California Occupational Safety and Health Standards on November 20, 2002 by MACTEC Engineering (MACTEC). GE has conducted abatement activities to remove asbestos containing materials (ACM) that were found to be in fair or poor condition from the building prior to January 31, 2002. All lead containing materials were found to be intact and in good condition.

The following table details the areas and dates of ACM removal. The closure reports are enclosed with this document.

Date of Removal	Location	Type of Material	Level of Asbestos	Quantity	Friability	Condition Prior to Removal
12/30/02	Disposition Office	12" x 12" tan floor tile (peel & stick)	<1% Chrysotile	90 SF	Non-friable	Fair
12/10/02	HVAC Room & NE Area of S. Stockroom	HVAC flex connector	60 % Chrysotile	2 EACH	Non-friable	Fair
12/10/02	HVAC Room	HVAC gasket	40 % Chrysotile	150 SF	Non-friable	Poor
12/30/02	SE Stockroom	Floor tile mastic	5 % Chrysotile	4,800 SF	Non-friable	Fair

At the conclusion of our December 17th final walk-through of the property, airport staff Erica Blyther, Sam Wong and Solomon Hays indicated to GEES representatives that everything was in good order and nothing further was required of GEES prior to turning this facility over to the Airport Authority. During our subsequent conversation on December 23rd, you confirmed that based on the Airport's review of the lease, drafts of the reports referenced in this letter, and the walk-through of the property, GEES has satisfactorily performed all tasks required to exit the property under its lease and the lease modification agreement under which this portion of the lease is being terminated.

To our knowledge we have complied with all applicable terms and conditions of the lease termination agreement. Please contact me as soon as possible, but not later than within two weeks of receiving this letter if you believe we have not complied with all applicable terms and conditions of the lease termination agreement. Additionally, please contact me with any questions or concerns that you may have regarding the enclosed information at 909-937-5300.

Sincerely,

Rob Meyers
 Manager, Environmental Health and Safety Programs

EXECUTIVE SUMMARY

GE Engine Services, Inc. (GEES) retained MACTEC Engineering and Consulting, Inc. (MACTEC) f/k/a Harding ESE, Inc., to prepare this Phase I Environmental Site Assessment (ESA) for Hangar 4 (Area of Focus) located at the GEES facility, 1923 East Avion Street, Ontario, California (Site) (Site; Plate 1). This ESA was conducted on behalf of GE Engine Services, under Purchase Order No 253003822. MACTEC's project team included Messrs. Jeffrey Davies, Wayne Leung, Richard McKenna and Richard Hamaker.

Hangar 4 located in the southeastern portion of the Site, is approximately 57,200 SF and for the most part is vacated. GEES is in the process of vacating all portions of the building. With respect to the overall GEES facility, the Ontario Airport is located to the north. To the east of facility and adjacent to Hangar 4 are vacant asphalt lots. To the south and adjacent to Hangar 4 is a parking lot used by the facility. To the west of Hangar 4 is an asphalt-paved open area beyond which is the GEES Facility.

MACTEC conducted an inspection on October 10 and 18, 2001 and follow-up inspections on November 4 and 20, 2002 of Hangar 4 that included inspecting Hangar 4, its attached buildings, the area immediately surrounding Hangar 4, performing a drive-by reconnaissance of the adjacent properties and conducting a limited walk through inspection of the grounds of the adjacent GEES Facility.

The following summarizes MACTEC historical research of the Area of Focus:

- The first two buildings, Hangars 1 and 2, at the Site were constructed in the late 1940s.
- In approximately 1950, Northrop Aircraft Company reportedly began manufacturing operations on the north side of the current Site in present day Hangar 1.
- In 1951, construction of Hangar 3 was completed.
- Prior to 1953 Douglas Aircraft began operations at the Site in Hangar 2 or 3.
- In 1953 Hangar 4 was constructed.
- In approximately 1955, GEES moved their operations to Ontario Airport, Douglas and Northrop vacated the Site.
- From 1955 to 1980, Lockheed Aircraft reportedly occupied Hangar 4.
- In 1980, GEES moved its operations into Hangar 4.
- In 1985 the Site was connected to the domestic sewer system.
- In 1990 Hangar 4 was connected to the Sites domestic sewer line.

During MACTEC's inspections on October 10 and 18, 2001 and November 4 and 20, 2002, MACTEC noted the following:

- During the inspection, no distressed vegetation or evidence of clarifiers or USTs were observed.

- Evidence of groundwater monitoring wells was not observed in or surrounding Hangar 4.
- Sealed boreholes were observed in the area of the former EDSA and Test Cell, west and southwest of the Area of Focus in the vicinity of the Hazardous Materials Storage Area.
- In October 2001, chemical storage was observed in the Cold Storage Room in Hangar 4. Chemicals were stored in a neat and orderly fashion in small containers, generally < 1 gallon.. Not all chemicals were in chemical storage cabinets. Some were stored on open shelving. Flammable chemicals were stored in flammable storage cabinets. The concrete floor was sealed and appeared to be in good condition without evidence of spills or staining.
- Chemical storage had been removed from Hangar 4 prior to the November 2002 visits. The Cold Storage Room was re-inspected. No evidence of chemical spills or staining in the vacant room was observed.
- Wastes appeared to be properly managed and disposed during all visits.
- MACTEC noted pad-mounted electrical transformers at the Site. These transformers are owned and operated by Southern California Edison (SCE). SCE maintains that none of their transformers contain PCBs. MACTEC did not observe any leaks or stains.
- The EDR report indicates that 17 USTs are known to have existed at the GEES Site. No USTs were located in the Area of Focus (Hangar 4).
- The GEES Site, but not specifically Hangar 4, was listed on the ERNS, Cal-Sites, Cortese, LUST and CA SLIC database (Section 5.1 and Appendix A). These listings are associated with the historical environmental issues previously discussed. Numerous offsite properties were listed on various regulatory environmental databases. Based on MACTEC's review, these properties are not anticipated to environmentally impact the Site.
- One up-gradient site was listed in the EDR report as having a leaking underground storage tank. Wells Fargo Bank, 1862 Holt Boulevard, is approximately 0.75 miles north (up-gradient) of the Site. The property is noted to have a leaking underground storage tank that leaked 834 pounds of an aqueous solution with less than 10% total organic residues. No additional data was provided. Based on the distance of this property from the Site and distance to groundwater in the area, it is unlikely that the Site has been impacted by this property.

MACTEC's investigation identified the following recognized environmental conditions (RECs), as defined by ASTM in the Area of Focus.

- In 1956, Northrop connected Hangar 4 to a cesspool. Hangar 4 remained connected to the cesspool until it was connected to the Site's sanitary sewer system in 1990. Mr. David Lu, an Environmental Manager formerly employed with GEES, stated that a septic tank/leach field existed for Hangar 4. Mr. Lu could not recall the location of this septic tank/leach field. Closure or sampling data for the leach field and septic system could not be located at the time of the ESA.

1.0 INTRODUCTION

GE Engine Services, Inc. (GEES), Ontario, California retained MACTEC to conduct a Phase I Environmental Site Assessment (ESA) at 1923 East Avion Street, Ontario, California (the Site or facility) (Site Location Map: Plate 1). The ESA primarily focused on Hangar 4 (Area of Focus) and the adjacent areas immediately surrounding Hangar 4. Additional GE Engine Services buildings are present on Site; however, these other buildings are not included in this scope of work.

1.1 Objective

The objective of the ESA was to identify recognized environmental conditions (RECs). The term *recognized environmental conditions* as defined by ASTM is the presence or likely presence of any *hazardous substances or petroleum products* on a *property* under conditions that indicate an existing release, a past release, or a material threat of a release of any *hazardous substances or petroleum products* into structures on the *property* or into the ground, groundwater, or surface water of the property. The term includes *hazardous substances or petroleum products* even under conditions in compliance with laws. The term is not intended to include *de-minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. This report includes information gathered from federal, state and local agencies; Site representatives; personal interviews with people familiar with the Areas of Focus and surrounding properties; and a Site visit conducted by MACTEC representatives. The report is intended to meet the requirements of ASTM E1527-00.

1.2 Procedures and Methodologies

The ESA conducted by MACTEC included, but was not limited to, the following services:

- Walkthrough Site inspection
- Drive-by observation of adjacent properties and Site vicinity
- Interviews with people familiar with the Site
- Interviews with Site Representatives

- Regulatory agency file reviews
- Historical records review
- Report development including summary of conclusions.

1.3 Special Terms and Conditions

This document was prepared for the sole use of GE Engine Services and its successors and assignees, and may be relied upon by such successor(s) or assignee(s). No other party should rely on the information contained herein without prior written consent of MACTEC and GE Engine Services. Our professional judgment to assess the potential for contamination is based on limited data; no other warranty is given or implied by this report.

1.4 Limitations and Exceptions of Assessment

Specific to the ESA, lack of evidence of the presence of hazardous materials following completion of the tasks of a reasonable and mutually agreed-upon scope of work does not guarantee the absence of such materials; rather, it indicates only that none were found as a result of the services provided. Although the limited nature of MACTEC's proposed scope of work precludes the firm from providing a warranty or guarantee regarding the presence or absence of hazardous materials that could potentially affect the Site, MACTEC has provided its best professional judgment of possible hazardous materials issues and performed the practices and procedures generally accepted in the consulting engineering field.

2.0 SITE OVERVIEW

2.1 Site Location

GE Engine Services is located at 1923 East Avion Street in the City of Ontario, California (the Site or facility) approximately 30 feet east of the intersection of Vineyard Avenue and East Avion Drive (Plate 1). The Site is approximately 2.5 miles north of the Pomona Freeway (60), approximately 1.5 miles south of the I-10 Freeway and approximately 7 miles west of the I-15 Freeway. Ontario International Airport is located immediately to the north of and adjacent to the Site. The total GEES property acreage is approximately ????

2.2 Area of Focus Description and Use

The "Site" Plan depicting the Area of Focus and adjacent areas is presented in Plate 2. A plot diagram of Hangar 4 is presented in Plate 3. The Area of Focus includes one building currently known as Hangar 4. Hangar 4, approximately 57, 200 square feet, is located in the southeastern portion of the Site (Photos 1 & 2). Hangar 4 includes a former tool control annex, chemical storage room, stockroom and Bone Yard and an active Scrap Yard and Customer Parts Storage.

The building is constructed of corrugated sheet metal that covers steel I-beams and has a concrete floor. The roof is corrugated-metal sheeting covered with a built-up roof and cap sheet. It appears to have been constructed in phases with the former tool control area being the newest construction.

Former Operations, October 2001

At the time of the initial site visit in October 2001, GEES was using Hangar 4 for storage and distribution of engine parts, tool control, chemical storage, customer parts storage and scrap yard.

The Customer Parts Storage located at the northeast corner of Hangar 4 was being used during all visits and consisted of cleaned parts stored on metal racks. No evidence of chemical staining was observed.

The Scrap Yard is located at the northwestern corner adjacent to and outside of Hangar 4. The Scrap Yard is fenced and gated. Scrap parts and metals are accumulated and packaged for disposal in this area

Three, pad-mounted transformers are located in a fenced area south of the Scrap Yard on the west side of Hangar 4. No evidence of leaks was observed during any of the inspections.

A Cold Storage Room was located immediately south of the transformers inside the main building. During the October 2001 visit, chemical storage was observed in the Cold Storage Room. For the most part, chemicals were stored in proper chemical/flammable cabinets. However, miscellaneous storage of chemicals was noted on metal shelving. Chemicals in this area were stored in squeeze tubes and pint, quart and gallon-size plastic and glass containers. Chemicals included lubricants, adhesives and other similar production chemicals. The room has a coated, concrete-floor. No evidence of chemical spillage or staining was noted.

Tool Control was located in an annex building at the southwest corner of Hangar 4. No spills or chemical staining was noted.

Along the north and south exterior sides of Hangar 4 were open areas used for miscellaneous storage. At the southwest corner of Hangar 4 extending along the southern and eastern sides of the building was an area known as the "Bone Yard". The Bone Yard was used for the storage of used metal and wooden tables, crates, fixtures, and other miscellaneous items for salvage. To the west of Hangar 4 is an area used for recycling wooden pallets and items. Southwest of Hangar 4 is the solid waste compactor and metals recycling bin. Asphalt-covered areas surround the building.

Along the north and south exterior sides of Hangar 4 are open areas used for miscellaneous storage. At the southwest corner of Hangar 4 extending along the eastern side of the building is an area known as the "Bone Yard". The Bone Yard is used for the storage of used metal and wooden tables, crates, fixtures, and other miscellaneous items for salvage. To the west of Hangar 4 is an area used for recycling wooden pallets and items. Southwest of Hangar 4 is the solid waste compactor and metals recycling bin. Asphalt-covered areas surround the building.

Current Status, November 2002

At the time of the subsequent inspections on November 4 and 20, 2002, GEES was not using Hangar 4 and the main building was empty except for old unused offices, the Scrap Yard and Customer Parts Storage. The

Tool Control Annex southwest of the main building was empty except for a fenced area and an unused office. No evidence of staining was observed on the floors in these areas.

On November 4 and 20, 2002, the Cold Storage Room was empty and all chemicals had been removed. There was no evidence of staining on the walls or floor in the room.

During the November 4 and 20, 2002 the Scrap Yard was operational. No evidence of staining was observed in the area.

Based on a review of topographical maps and aerial photographs, Hangar 4 was constructed between January and May of 1953. The MBA report indicates that the Lockheed Aircraft Service Company occupied Hangar 4 from 1956 through 1980 at which time GEES took occupancy of the building (Appendix H, MBA page 70). The May 5, 1953 aerial photograph from the Fairchild collection shows vehicles parked around Hangar 4 indicating that the building was occupied in some manner. MACTEC could not determine what company occupied Hangar 4 prior to 1956.

2.3 Site and Area of Focus Vicinity Characteristics

The area surrounding the Site consists of:

- To the north: Asphalt-covered lots and roads and the Ontario International Airport;
- To the east: An open asphalt-covered lot, across the asphalt-covered lot is Mercury Air Center;
- To the south: A parking lot for the Site and East Avion Street, across East Avion Street to the south and southeast is the Ontario Airport International Maintenance yard, to the southwest at the corner of East Avion and South Vineyard Avenue is LSG Sky Chef. Burlington Northern railroad tracks are located beyond these facilities and Mission Boulevard is located beyond the railroad tracks.
- To the west: Ontario Aircraft Service.

Hangar 4 Vicinity Characteristics

The area surrounding the Hangar 4 building consists of:

- To the north: An asphalt-covered area. Approximately 25 feet to 50 feet north of the building is the property fence. Beyond the property boundary fence is a vacant asphalt-covered lot that wraps around from the east (Photo 10). Beyond the vacant asphalt-covered lot on the north and northeast is the Ontario International Airport. On the northwestern corner adjacent to and outside of Hangar 4 is the fenced Scrap Yard (Photos 13 & 27).
- To the east: An asphalt-covered area. During the October 2001 visit, the area directly to the east of Hangar 4 for approximately 50 feet was formerly known as the "Bone Yard" which was used for storage of unused engine stands and equipment (Photos 5,6,7,&8.). Beyond the Bone Yard is the property boundary fence. Beyond the property boundary fence is an asphalt-covered vacant lot. The Bone Yard had been removed by November 2002 (Photos 24 & 25).
- To the south: An asphalt-covered area. Across the asphalt-covered area is the south property boundary fence and the parking lot for the Site (Photos 3,4,5, 6, & 23).
- To the west: An asphalt-covered area. The asphalt-covered area was used to store wooden crates for shipping and houses the solid waste trash compactor and disposal bins (Photos 13, 14, 15). The

remainder of the GEES Site is located west of Hangar 4 building. Across the asphalt-covered area is the current Hazardous Materials Storage Area.

- At the northwest corner adjacent to the outside corner of Hangar 4 is the Scrap Yard (Photos 13 & 27).
- Three pad-mounted transformers are located south of the Scrap Yard immediately west of Hangar 4 (Photo 11 & 28).
- Approximately in the middle, on the western side of Hangar 4 is the Chemical Storage Room. The Tool Control/Fabrication Building is located on the west side at the south end outside of Hangar 4 (Photos 29 & 31).

2.4 Topography and Surface Water Characteristics

2.4.1 Topography

Based on the United States Geological Survey (USGS) Guasti Quadrangle, the topography in the immediate vicinity of the Site slopes to the south and the topography of the general vicinity slopes to the south-southwest. The Site is situated approximately 915 feet above mean sea level (MSL).

2.4.2 Site Proximity to Existing Designated Wetlands

A walk-through Site inspection did not reveal existing wetlands or any conditions, such as vegetation or standing water, that would indicate the presence of a wetland on the Site or immediately adjacent to the Site. According to the USGS Guasti quadrangle topographic map, the Site is not listed in the vicinity of a designated wetlands area.

2.5 Geological Characterization

The Site lies in what is known as the Chino Groundwater Basin. Regionally, the Chino Basin is part of the upper Santa Ana River Valley. The Chino Basin itself is approximately 300 square miles in area, lying at the juncture of the Peninsular Range physiographic province and the Transverse Range physiographic province. The San Gabriel Mountains border the Chino Basin to the north, the Puente Hills border the Basin to the west-southwest, and the Santa Ana Mountains flank the Basin to the south (Dames and Moore, 1992).

The Chino Basin is a fault-bounded product of the uplift of the neighboring San Gabriel Mountains (a segment of the east-west trending Transverse Ranges) and the mountains of the northern-most Peninsular Ranges (which trend north-northwest-south-southeast). Uplift of these ranges, and consequent down-dropping of adjacent blocks have created basins (including the Chino Basin) and was primarily the result of latest Cenozoic tectonic activity (Dames and Moore, 1992; Ehlig, 1981; Crowell, 1981; Dibblee, 1970).

Geophysical investigations conducted in various areas of the Chino Basin suggest that alluvial deposits extend to a depth of approximately 700 feet beneath the Site and to 1,000 in the deepest part of the basin (Fife, et. al., 1976). Conflicting studies indicate that alluvial sediments extend to a depth of 2,000 feet (USGS, 1972). The alluvial material is composed of sediment, produced primarily by erosion of the San Gabriel Mountains. Because of the rapid uplift of the San Gabriel Mountains, and their close proximity to the Chino Basin, sediment deposited in the basins is very coarse with gravels and sands as the dominant materials (Dames and Moore, 1987; Moyle et. al., 1986). Deposition of sediment shed from the San Gabriel Mountains, coincident with continuing intense tectonic activity has resulted in complex facies distribution with rapid facies changes occurring both laterally and vertically (Hsu, 1954, Dames and Moore, 1987).

There are currently no recognized active faults existing on or immediately adjacent to the Site sands (Dames and Moore, 1992).

The deepest part of the Chino Basin is composed of up to 2,000 feet of alluvial sediment including alluvial fan material deposited by streams, river channel deposits, and occasional sand dune deposits (USGS, 1972). The sediment is derived almost entirely from igneous- and metamorphic-rich terrain of the San Gabriel Mountains to the north. Crandle (1981) describes the subsurface in the northeast part of the basin as a mixture of coarse gravel and sand horizons interbedded with less permeable sandy silt horizons sands (Dames and Moore, 1992).

The sequence of alluvial strata is the thickest near the mountain fronts and thins to the south where the Santa Ana River has eroded the thin sedimentary veneer to the underlying bedrock. The coarseness of sediment decreases from north to south, and the degree of sorting increases from north to south. In a vertical sequence the sediment size and sorting varies rapidly with the most recent surficial deposits being silty sands (Dames and Moore, 1992).

Geologic relations and inferences suggest basement rock is comprised primarily of Mesozoic intrusive rock and pre-intrusive metamorphic rock (Ehlig, 1981).

2.6 Groundwater Characterization

The Site is located in the northwest portion of the Chino Groundwater Basin that is a subunit of the Upper Santa Ana River Basin. The lateral and vertical extent of the Chino Basin is controlled by the distribution of the Late Pleistocene and Holocene alluvial deposits. The basin is separated from surrounding hydrologic units by the Cucamonga fault zone and the San Gabriel Mountains to the north, by the Chino fault zone and Puente Hills to the west, by the San Jacinto fault zone to the east, and by impermeable subsurface geologic structures to the south (Dames and Moore, 1992).

Groundwater in the basin is contained in alluvial aquifers created by the approximately 1,000 to 2,000 feet of alluvial sediments. The uppermost aquifer is reported to be unconfined and is saturated at a depth of approximately 250 to 350 feet below ground surface. The groundwater aquifers are recharged in a small part by surface water infiltration and to a much larger extent by runoff from the nearby San Gabriel Mountains during storm events. Hydraulic conductivity and the water yield to producing wells are generally high (Dames and Moore, 1992).

The Site is in the Chino Basin Watermaster Water Management Zone Number 2. Chino Basin Watermaster Optimum Basin Management Program Draft Report indicates that groundwater is located 625 feet below ground surface. The water table in the City of Ontario, which is in close proximity to the Site, occurs approximately 250 to 300 feet below ground surface. The groundwater at GE's test cell facility located 0.25 miles southeast of the Site is at approximately 250 feet below ground surface. The gradient of the water table beneath the Site is generally to the southwest (Dames and Moore, 1992). Chino Basin Watermaster reports that the gradient throughout the Chino Basin is south/southwest.

2.7 Groundwater Well Search

The Chino Basin Watermaster, Optimum Basin Management Program indicates that there are no active (pumping) municipal, residential or industrial wells south or southwest of the Site for a distance of approximately 2.5 miles. During a February 21, 2002 telephone conversation, Mr. Bob Holub of the

RWQCB confirmed that the RWQCB has not identified active wells south to southwest of the Site for approximately 2.5 miles (Interstate 60).

3.0 SITE HISTORY

3.1 History of Property Use

MACTEC reviewed historical Site and adjacent property use to assess whether past activities conducted on the Site by GEES, past activities conducted on the Site by prior owners, or past activities conducted on adjacent properties could pose environmental concerns or impacts to the Site. MACTEC's research included conducting personal interviews, reviewing local agency records, reviewing historical city directories, historical aerial photographs, historical Sanborn Maps and historical topographic maps. MACTEC's sources of historical information included the following:

- Black-and-white aerial photographs dated 1949, 1953, 1968, 1977 to 1994 (1989 is color). Environmental Data Resources, Inc. (EDR) provided the aerial photographs to MACTEC. (Historical Information; Appendix A).
- Black-and-white aerial photographs dated 1933, 1935, 1939, 1945, 1949, 1951, 1952, 1953, and 1958 from the Fairchild Aerial Photograph Collection at Whittier College, Whittier, California.
- Historical City Directories dated 1914, 1937, 1946, 1951, 1959, 1963, 1968, 1972, 1978, 1983, 1987 and 1990. The City Directories were reviewed at the Haines Criss Cross Directories library.
- City of Ontario Building Department records.
- Historical Topographic Maps dated 1903, 1944, 1953, 1954, 1966, 1973 and 1981. USGS Topographic Map, Guasti Quadrangle, 7.5 Minute Series, Ontario Quadrangle, 15 Minute Series and Cucamonga 15 Minute Series.

The following sections summarize the results of the historical review.

3.2 Historical Records Review

The following section presents the results of MACTEC's historical record review including aerial photographs, historical topographic maps and historical city directories of the Site. The land in the vicinity of the Site and the Site itself appears to have been developed between 1945 and 1949. The Ontario Airport is not depicted on the 1903 or 1944 Topographic Map, yet the Ontario Airport appears in operation by 1949. The airport may have been deleted from the 1944 Topographic Map for war security reasons (Appendix A).

1994	<p><u>Subject Site:</u> The Site appears as currently developed.</p> <p><u>Adjacent Properties:</u> The adjacent properties to the north are the Ontario Airport.</p>	<p>Aerial Photograph Source: USGS Date – 1994 Scale 1"=666'</p>

YEAR	OBSERVATIONS/FINDINGS	SOURCE
	Adjacent to the east appears to be an asphalt area. Adjacent to the south, are parking areas, East Avion and industrial buildings. Adjacent to the west are airport/industrial buildings.	

3.2.1 Historical Review

According to the MBA report (Appendix H), dated June 10, 1992, the Ontario Airport served as a municipal airport during the 1930's, a military base in the 1940's, and in the 1950's, the post-war industrial boom caused the development of various aircraft production and maintenance facilities at the Ontario Airport.

The 1945 aerial photograph of the Site indicates that hangars were not present at the Site. By 1948, two hangars were present (MBA page 25). The 1949 aerial photograph shows that Hangars 1 and 2 are present; one (present day Hangar 1 adjacent to Tool Control) has an Ontario emblem on the roof. (Appendix B) The building in the Area of Focus are not present. The 1951 aerial photograph shows Hangar 3 being constructed. The 1952 aerial photograph shows that Hangar 3 has been constructed. The early 1953 aerial photograph shows that the ground is disturbed where Hangar 4 is located. The May 6, 1953 aerial photograph shows that Hangar 4 had been constructed and it forms an L-shaped structure. Other sections of Hangar 4 were added at a later date.

MBA indicated that General Electric's Aviation Service operation was moved to the current site in 1955 (MBA, page 12).

The 1966 aerial photograph shows that Hangar 4 has been completed to its present shape and size.

The following sections discuss each Area of Focus from information obtained from the MBA report, topographical maps, aerial photographs, interviews and other sources of information as listed in Section 7.0

Based on a review of aerial photographs, Hangar 4 appears to have been constructed in early 1953. According to MBA (page 70), Lockheed Aircraft Service Company (LAS) previously occupied Hangar 4, historically known as Hangar 4, from about 1956 through 1980.

“According to a Building Department Permit, dated 7 December 1956, Lockheed installed a 1,240-gallon septic tank and a 35-foot deep cesspool (located at the old Northrop area)” (MBA, page 70). MACTEC could not identify the exact location of the “Old Northrop Area”. Mr. David Lu, former Environmental, Health and Safety Manager with GEES from 1989 to 1998, stated that in 1990 Hangar 4 was connected to the GE Facility’s domestic sewer lines. He did not recall the location or disposition of the septic tank, cesspool or any associated leach field that served Hangar 4. Ontario Building Department permits/applications verify a sewer connection being made in 1990 (Appendix D). During the Phase 1 ESA, MACTEC did not find closure reports and/or sample results to close these features.

Historically, no USTs, except for the septic tanks, were identified in the immediate vicinity or associated with Hangar 4. The closest USTs were approximately 200 feet west of Hangar 4 in the area of the historical Test Cell. On 17 October 1994, the DTSC issued an “Acceptance of Closure Certification” letter to GE Engine Services for this and other USTs (Appendix F).

In the past, Hangar 4 has been used for several activities. From 1956 to 1980, Lockheed conducted undisclosed manufacturing activities in the building. According to Mr. Roman Riebli, a Shipping/Receiving Facilitator/Supervisor employed with GEES, since approximately 1980, Hangar 4 was used for manufacturing the mounts for the Vulcan Gun on personnel carriers. Welding operations were conducted as part of this manufacturing process. Aluminum cleaning tanks containing caustic soda were present in the building to clean aluminum parts prior to welding. The cleaning tanks were reportedly located east of the current break area. Aluminum parts were sent offsite to be anodized. Radial saws with red saw blades used to cut steel were present in the northwestern corner of the building. Aerial photographs show that Hangar 4 roof is stained a reddish-brown in this area. According to Mr. Riebli, the red saw blades caused this staining (Photos 1 & 32).

During the Site visit, a raised area was identified in northwestern corner of the eastern-half of Hangar 4. The area is approximately 15-by-15 feet, on an approximately 3-inch high concrete pad and had a cinder-block

wall on the western wall. A large vent approximately 8-feet above the floor was also present in the western wall of this area. The purpose of the vent could not be determined from present-day operations. Minor staining running down the cinder blocks from the vent was noted on the wall. The staining indicates that the vent may have been used to vent vapors from possible rinse tanks. It is likely this is the area east of the break area formerly used as a caustic clean line spoken of by Mr. Reibli (Section 4.1.1). A desk was located along the northern wall of this area and a storage rack was located along the west wall (Photo 20).

A former restroom was identified by the presence of 1-by-1-inch, ceramic tile and cement patches where drains may have been located were identified in the eastern half of the main building

3.2.2 Historical City Directories

MACTEC obtained available historical city directories for the Site from EDR. MACTEC reviewed addresses likely to have been historically associated with the Site on East Avion Drive. This information is summarized below (Appendix E):

1923 E. Avion Drive

1914	Alphabetical index only.
1937 to 1983	Street not listed in research source.
1987	General Electric Sales.
1990	GE Co. Maintenance Center.

Surrounding Properties-E. Avion

1914	Alphabetical index only.
1937 to 1972	Street not listed in research source.
1987	No addresses listed prior to 1801 East Avion. Beechcraft West Ont/DLB Interiors/P&M Airlines (2161).
1990	No addresses listed prior to 1801 East Avion. Federal Express Pickup (1801) East Avion,

Beechcraft West Ont/DLB Interiors/US Agri Forest Air (2161).

No addresses listed beyond 2161 East Avion.

3.3 Agency File Review

3.3.1 County of San Bernardino Fire Department

MACTEC contacted the County of San Bernardino Fire Department (SBFD) for records concerning the storage of hazardous materials/waste, hazardous spills and USTs at the Site. SBFD stated that they do not maintain environmental records and deferred to the County of San Bernardino Environmental Health Services Department (SBDEH).

3.3.2 County of San Bernardino Department of Environmental Health Services

MACTEC contacted the SBDEH that maintains records concerning the utilization, manufacture, storage or discharge of hazardous materials/waste, and for information concerning previous or on-going site investigations and/or remediation pertaining to hazardous materials/waste for 1923 East Avion Street. These records are discussed below in Section 3.4 Summary of Previous Environmental Reports.

3.3.3 Division of Oil and Gas-Munger Map Book

Review of Munger Map Book records indicated no historic oil wells within one mile of the Site.

3.3.4 City of Ontario Building Department

MACTEC reviewed City of Ontario Building Department records. Various permits were identified for the overall GE Ontario facility from 1980 to 1997.

From MACTEC's review of the GE Ontario Facility, the only feature impacting the Area of Focus is the installation of the wastewater line (sewer) in 1990. Based on MACTEC's interview with Mr. Lu, this was the connection of Hangar 4's sanitary sewer to the Site's sanitary sewer system. Ms. Du Bois stated that based on her conversations with a City of Ontario Building Department representative, sanitary sewer connections were made in 1985 connecting the Site to the City of Ontario's sanitary sewer system.

Other permits were identified, however, these were not found to be environmentally significant or pertaining directly to the buildings in the Area of Focus.

3.4 Summary of Previous Environmental Reports

MACTEC requested previous environmental reports from Ms. Du Bois (Site Contact) at GEES. Ms. Du Bois provided several reports. Additional reports were acquired through the SBEHD and the DTSC.

In its review of these environmental reports, MACTEC did not identify any documented environmental areas of concern with the potential to impact the Area of Focus:

3.5 Summary of Historical Information

Based on MACTEC's historical research, the Site was developed in approximately 1950 with Northrop Aircraft Company manufacturing new aircraft on the northern side of Site in Hangar 1 and 2. Douglas Aircraft was reported to have begun repairing aircraft on the southern side of Site in approximately 1952 in Hangar 3. Hangar 3 appears to have been constructed in approximately 1952. By 1955, GE Engine Services was reported to have moved their facilities to Ontario in Hangars 1, 2 and 3. In approximately 1956, Lockheed Aircraft constructed Hangar 4 building and conducted undisclosed operations. GEES acquired Hangar 4 in approximately 1980.

MACTEC did identified only one historical recognized environmental concerns (RECs):

- According to a 1956 Building Department Permit, Lockheed Aircraft Services installed a 1,240-gallon septic tank and a 35-foot-deep cesspool for Hangar 4. The cesspool was reportedly located at the "old Northrop area", an area that could not be located by MACTEC. Hangar 4 was connected to the Site's sanitary sewer system in 1990. Mr. David Lu, an Environmental Manager formerly employed with GE Engine Services, stated that a septic tank/leach field existed for Hangar 4. Mr. Lu could not recall the location of this septic tank/leach field. Closure or sampling data for the leach field and septic system could not be located at the time of the ESA.

4.0 SITE RECONNAISSANCE

4.1 Site Reconnaissance

The initial Site inspection was conducted on October 10 and 18, 2001, by MACTEC's Mr. Wayne Leung and Mr. Richard Hamaker. Additional walkthrough inspections were conducted on November 4, and November 20, 2002 by Messrs. McKenna and Hamaker. The walkthrough inspections were conducted onsite to identify visible evidence of RECs. Photographs taken during MACTEC's Site inspection are provided in Appendix C.

4.1.1 Interviews with Persons Knowledgeable about the Site

Personal interviews were conducted with individuals having knowledge of either the Site or surrounding areas. These interviews are summarized below:

- **Mr. Donald Davidson** – Mr. Davidson, Quality Engineering Specialist, began working at the Site in 1981. He stated that he did not have knowledge of former activities or operations conducted in Hangar 4.
- **Ms. Theresa Du Bois**- Ms Du Bois of GE Engine Services is an Environmental Health Services Specialist. Ms. Du Bois provided MACTEC with a recent environmental history of the current development. To Ms. Du Bois' knowledge there have been no recent/current environmental violations or issues concerning the Site. The Site does dispose of hazardous waste. A 55-gallon drum of oil/fuel filters is generated at the scrap yard located adjacent to on the northwestern of Hangar 4. Ms. Du Bois also stated that to her knowledge there were no underground storage tanks currently on the Site.
- **Mr. David Lu**-Mr. Lu was the former environmental manager for the Site from 1989 to 1998. He stated that fluorescent penetrant may have been used in Hangar 4. Mr. Lu stated that he did not remember any USTs in or associated with Hangar 4. Mr. Lu stated that Hangar 4 was connected to the Facility's wastewater sewer line in 1990. He stated that prior to that time Hangar 4 was connected to a septic system. He stated that he remembered that there was septic leach field at Hangar 4 building; however, he did not remember where it was located. He also could not remember if soil samples had been collected in the leach field.
- **Don Nowotney** – Mr. Nowotney, Supervisor, began working at the Site in 1966 as a "bench mechanic" in Hangar 1. In 1970 he transferred to Hangar 3 and worked on J-85 nozzles until 1977. In 1977 he transferred back to Hangar 1 as a work supervisor until 1986. He worked in Hangar 2 until 1989 and then transferred back to Hangar 1 until the present. Mr. Nowotney described activities in Hangar 3, Tool Control and Hangar 4. He confirmed that test stands were present in Tool Control and that flow control was located in the northeast corner of Tool Control. He stated that Hangar 4 constructed portable test stands and made modifications to gattling guns for tanks. (Because he did

not personally work in Hangar 4 and because this could not be confirmed, it is not mentioned elsewhere in the report).

- **Roman Riebli** – Mr. Riebli, Shipping/Receiving Supervisor/Facilitator, began working at the Site in 1967. Mr. Riebli described operations in Hangar 4 including the aluminum cleaning line, welding and the manufacture of mounting stands for the “Vulcan Gun” on personnel carriers. He specified the location of the clean line and explained the roof staining in the northwest corner of the building as caused by the colored saw blades used to cut mounting stands and barrels. He stated that aluminum parts were sent off site for anodizing.

4.1.2 Property Inspection

On October 10 and 18, 2001 Mr. Leung performed the initial walkthrough inspection of the Area of Focus. Mr. Leung observed the Area of Focus grounds and structures for visible evidence of RECs. In addition to the Area of Focus, operations at the Site were observed in the vicinity of the Area of Focus. Messrs. McKenna and Hamaker conducted additional walk through inspections on the dates stated above to note any changes that may have occurred since the initial inspection. Changes had been made, but none that environmentally impacted the property or caused an REC.

4.1.3 Access to the Area of Focus

The Area of Focus is accessible from E. Avion Drive on the south and a locked gate by Tool Control from the Ontario International Airport on the north.

4.1.4 Aboveground/Underground Storage Tanks, Sumps and Pits

Currently, there are no USTs known to be associated with the Site or Area of Focus.

MACTEC identified 15 USTs that historically existed on the Site. All Site USTs have reportedly been properly removed and have received an acceptance of certification of closure from DTSC in 1994 (DTSC Acceptance of Certification of Closure 1994, Appendix F).

4.1.5 Wooded Areas

There are no native wooded areas on Area of Focus.

4.1.6 Water Bodies

There are no natural water bodies on the Area of Focus.

4.1.7 Drainage Paths

Stormwater drains south/southeasterly to a storm drain in the parking areas south of the Site and Area of Focus. Stormwater swales have been placed throughout the Site to direct stormwater away from buildings and the facility. Staining was not observed in the swells.

4.1.8 Onsite Utilities

The Site and Area of Focus utilities are provided by the following: City of Ontario (sanitary sewer and water), and Southern California Edison (electric) and Southern California Gas (gas). An electrical "substation" with three, ground-mounted transformers is located to the west of Hangar 4 in a fenced area on a concrete pad. No staining was observed (Photo 11 & 28). Transformers are discussed in Section 4.2.

No other onsite utilities, drains, vent pipes, or wells were observed in the Area of Focus.

4.1.9 Building Ruins

No remnants of former buildings were observed in the Area of Focus.

4.1.10 Heavy Equipment

Construction vehicles were not observed in the Area of Focus.

4.1.11 Obvious Odors

No chemical or petroleum smells or foul odors were noted during the Site or Area of Focus inspection.

4.1.12 Evidence of Landfills, Dumping, or Burial Activities

No evidence of landfilling or burial activities was observed at the Site or Area of Focus.

4.1.13 Evidence of Surface Impoundments or Holding Ponds

No surface impoundments or holding ponds were identified in the Area of Focus.

4.1.14 Evidence of Air Emissions or Wastewater Discharge

The GE Ontario Facility has an industrial wastewater treatment plant that discharges to the City of Ontario sewer system. This plant is permitted through the "permit by rule" system. The industrial wastewater permit number is 12416R-1 issued by the Inland Empire Utilities Agency and County Sanitation Districts of Los Angeles County. This wastewater treatment plant is not in the Area of Focus. Ms. DuBois stated that buildings within the Area of Focus reportedly do not discharge industrial wastewater and are not connected to the wastewater treatment plant.

Currently, there are no active air permits for the buildings in the Area of Focus.

4.1.15 Evidence of Industrial or Manufacturing Activities

During the October 2001 Area of Focus visit, manufacturing activities were not observed within the Hangar 4. Hangar 4 was used for storage of engine equipment and parts, tool control and scrap yard/salvage yard functions.

Chemical storage was observed in the Cold Storage Room located inside Hangar 4 on the eastern exterior wall. Chemicals were stored in proper chemical/flammable cabinets and containers. Miscellaneous storage of chemicals was noted on metal shelving. Chemicals in this area were stored in squeeze tubes and pint, quart and gallon-size plastic and glass containers. Chemicals included lubricants, adhesives and other similar production chemicals. The room has a coated, concrete-floor. Staining or other evidence of spills were not observed in the Cold Storage Room.

4.1.16 Monitoring Wells or Remedial Activities

No evidence of monitoring wells or remedial activities were observed in the Area of Focus. Sealed bore-holes were observed to the west of Hangar 4. These were reportedly part of the subsurface investigation performed during the closure of the former EDSA and closure of the former Test Cell.

4.1.17 Evidence of Stained or Discolored Soil

No evidence of stained or discolored soils was observed in the Area of Focus.

4.1.18 Evidence of Leachate or Seeps

No evidence of leachate or seeps was identified in the Area of Focus.

4.1.19 Evidence of Distressed, Discolored, or Stained Vegetation

No evidence of distressed, discolored or stained vegetation was observed in the Area of Focus.

4.1.20 Evidence of Chemical Spills or Releases

No evidence of chemical spills or releases was observed in the Area of Focus.

4.1.21 Evidence of Groundwater and Surface Water Contamination

No evidence of groundwater or surface water contamination was observed in the Area of Focus.

4.1.22 Oil or Gas Well Exploration, Production, or Refinery Activities

No current evidence of oil or gas well exploration, production, or refinery activities was identified at the Site or Area of Focus.

4.1.23 Evidence of Farm Waste Concerns

No evidence of farm waste was identified at the Site or Area of Focus.

4.1.24 Discharges, Leachate, Migration, or Runoff of Potential Contaminants from Offsite Sources

No discharges, leachate, migration, or runoff of potential contaminants from offsite sources were identified in the Area of Focus.

Ms. DuBois pointed out that runoff from the Ontario International Airport flows onto the Site. Observation of the surface gradient confirms this statement. This was not observed during the Site visit. The Area of Focus is protected by the stormwater swales that are strategically placed throughout the Site. It could not be determined during the Site visit to what extent the Area of Focus is protected by these stormwater swales.

4.1.25 Other Known or Observed Environmentally Sensitive Conditions

MACTEC reviewed the Site with Ms. DuBois. To Ms. DuBois' knowledge, there currently are no known or observed environmentally sensitive conditions.

4.2 Transformers and PCB Equipment

Three pad-mounted transformers are located west and outside of Hangar 4. They are enclosed in a fenced area on a concrete pad. The number on the fenced area is PAE 74. The number on each of the three transformers is 465-00336. None of the three transformers were labeled in reference to PCB content. Historical data on these transformers was not provided.

Staining was not observed on or around any of the transformers. Pad-mounted transformers were free of debris and weeds.

All transformers are owned and operated by Southern California Edison (SCE). SCE has declared that none of these transformers are polychlorinated biphenyl (PCB)-containing. None of the transformers were labeled with either Non-PCB containing or PCB-containing labels.

Fluorescent light fixtures were observed in all three buildings in the Area of Focus. Based on the ages of the buildings, it is possible that the ballasts for these fixtures may contain PCB. According to Ms. Du Bois, fixtures are changed as needed. To her knowledge replacement of all light fixtures in buildings within the Area of Focus has not been done.

No other fluid containing, PCB-containing equipment /materials were observed in the Area of Focus.

4.3 Asbestos-Containing Materials

Clayton Environmental Consultants conducted an asbestos survey in November 1989. The survey report dated January 9, 1990 lists identified asbestos-containing materials. The following asbestos containing materials were identified during the survey:

Hangar 4 and Tool Control Building (Annex)

- 9-by-9-inch beige/yellow floor tile.
- Mastic under 9-by-9-inch beige/yellow floor tile.

On November 20, 2002, MACTEC conducted an building survey of suspect asbestos-containing materials. Results are pending.

4.4 Lead-Based Paint

From March 5 to April 4, 1996 Health Science Associates conducted a lead-based paint survey and personal air monitoring at the facility. The survey identified the following materials to be lead containing based on Cal/OSHA's interpretation of lead-based paint which is any paint containing 0.06% lead or more:

Hangar 4 and New Tool Control

- East corrugated wall
- Middle gray column
- Exterior pink corrugated wall
- Exterior yellow corrugated wall
- Corrugated wall in lunchroom
- Tool Control room support beams.

On November 20, 2002, MACTEC conducted a lead-based paint survey of Hangar 4. Results are pending.

4.5 Onsite Regulated Substance Identification/Inventory

During MACTEC's October 2001 inspection, we noted a Chemical Storage Area in Hangar 4 building. This storage area was separately secured. The chemicals stored within this area were stored on shelves with no evidence of leakage or spillage. Generally the chemicals were stored in pint or quart sized containers. All containers were observed to be in good condition. Chemicals observed in the Chemical Storage Area consisted mainly of acetone, adhesives, and isopropyl alcohol.

During November 2002 visits, chemicals had been removed from this room and the room cleaned. MACTEC did not observe evidence of chemical spills or staining.

4.6 Radon

No radon testing was conducted at the Site, as the Site is in an EPA Radon Zone 2 (indoor-average level greater than or equal to 2 picoCuries per liter and less than or equal to 4 picoCuries) according to the EPA's Map of Radon Zones. The EPA Action level for radon is 4 picoCuries per liter. Radon does not appear to be an environmental concern for the Site.

4.7 Solid and Hazardous Wastes

During the initial Site inspection, one drum of California-listed, non-RCRA hazardous waste was observed in the Area of Focus during the Site visit. The drum filled with oil/fuel filters was noted in the Scrap Yard adjacent to the northwestern corner of Hangar 4. The drum was in good condition without signs of leakage or spills. Oil filters are properly labeled and transported by Clean Harbors in Kimball, Nebraska for disposal. This is the only "hazardous waste" generated in the Area of Focus. This is a non-RCRA, California Listed hazardous waste.

Solid/municipal wastes are compacted onsite and transported and disposed by the City of Ontario.

Scrap metal is collected in bins and transported and disposed/recycled by Utica Alloy, Inc., of New York City New York.

Recycled Wood Products of Los Angeles, California transports and recycles wood products generated at the Site.

4.8 Surfacing

The surface areas surrounding the Area of Focus and the Site are predominantly covered by asphalt. The condition of the surfacing materials observed by MACTEC is as follows:

The area surrounding Hangar 4 is asphalt covered. On the west side in the immediate area of Hangar 4 the asphalt is cracked and has been re-coated or patched in several places. Approximately 50 feet to the southwest from Hangar 4, the asphalt is cracked with anthills visible in the asphalt. The area to the south is in good condition without significant cracking. The asphalt is cracked and appears in poor condition (it is still cohesive) on the southeast and east sides in the area known as the Bone Yard. The asphalt to the north appears in fair condition with minor cracking. A stormwater swell directs stormwater away from Hangar 4 on the north side of the building. Staining was not observed on the asphalt-covered areas surrounding Hangar 4 (Photo 3,4,5,8 &10).

4.9 Adjacent Property Use

MACTEC performed a drive-by reconnaissance of the properties adjacent to the Site to observe businesses that may use, store, generate, or dispose of hazardous materials. Adjacent properties are identified on Plate 2, and are described below:

- North: The adjacent property to the north of the Site (and north of Tool Control) is the Ontario Airport.
- East: The adjacent property to the east of the Site (and east of Hangar 4), is a vacant paved lot.
- South: The adjacent properties to the south of the Site (and south of Hangar 3), is parking lot for the Site.
- West: The adjacent properties to the west of the Site (and west of Tool Control), are airport/industrial buildings.

MACTEC notes that the Area of Focus is located within the Site that performs manufacturing and engine repair services.

The adjacent properties to the Site do not appear to be of environmental concern at this time. The airport proper is not listed on any environmental data bases. Properties within the airport but not adjacent to the site such as Lockheed are listed on environmental data bases.

5.0 REGULATORY AGENCY RESEARCH

5.1 Published Government List Review

Regulatory agency database information was obtained from Environmental Data Resources Radius Map Report (EDR), which maps and lists properties in government and state environmental databases with existing conditions or status that may have the potential to impact the Site. The EDR report is provided as Appendix D.

Federal Environmental Record Sources

ASTM E 1527-00 guidance required review of the following federal databases:

- **Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS, 0.500 mile), May 14, 2001** - CERCLIS contains data on potentially hazardous waste sites that have been reported to the U.S. Environmental Protection Agency (EPA) by states, municipalities, private companies, and private persons pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The CERCLIS List includes sites that are either proposed for the National Priorities List (NPL) or in the screening and assessment phase for possible inclusion on the NPL. Source: EPA/National Technical Information Service (NTIS).

There are no listed properties within 0.5 mile of the Site.

CERCLIS-No Further Remedial Action Planned (CERCLIS-NFRAP, 0.250 mile), May 14, 2001 - CERCLIS-NFRAP contains data on sites, where following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. Source: EPA/National Technical Information Service (NTIS).

(Site) GE Engine Services Inc, 1923 E. Avion Street The Site is listed to have completed the "discovery" and "preliminary assessment" stages in 1986. The Site is noted to not be a Federal Facility. The Site is also noted to be a FINDS, TRIS, CORRACTS, RCRIS-LQG, CA FID UST, ERNS, San Bernardino Co. Permit, Hist UST and CA Bond Exp. Plan facility. See the discussions below.

Emergency Response Notification System (ERNS, target property), August 8, 2000 - ERNS is a national database that records and stores information on reported releases of oil and hazardous substances. The database contains information on spill reports made to federal authorities including the EPA, U.S. Coast Guard, National Response Center, and Department of Transportation. Source: EPA/NTIS.

(Site) 1923 E. Avion Street. The Site was listed on seven separate listings for ERNS. No information was provided within any of the listings for the Site.

- **National Priorities List (1.000 mile), July 26, 2001** - The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. An NPL site must meet or surpass a predetermined hazard ranking system score, be chosen as a state's top priority site, or meet three specific criteria set jointly by the U.S. Department of Health and Human Services and the EPA. Source: EPA.

There are no listed properties within 1.0 mile of the Site.

- **Proposed NPL (1.000 mile), July 26, 2001** - The Proposed NPL is a listing of site being considered for NPL status. Source: EPA.

There are no listed properties within 1.0 mile of the Site.

- **Resource Conservation and Recovery Information System (RCRIS), June 21, 2000** - RCRIS includes selected information on facilities that generate, transport, store, treat and/or dispose of hazardous waste, as defined by the Resource Conservation and Recovery Act (RCRA). Source: EPA/NTIS. RCRIS includes the following databases:

- **RCRIS Treatment, Storage, and Disposal (TSD) Facilities (0.500 mile)** - Facilities that treat, store, and/or dispose of hazardous wastes.

There are no listed properties within 0.5 mile of the Site.

- **RCRIS Generators Lists (0.250 mile)** - RCRIS large quantity generators (LQG) are those facilities that generate at least 1,000 kilograms per month of non-acutely hazardous waste or meet other applicable RCRA requirements. RCRIS small quantity generators (SQG) generate less than 1,000 kg/month of non-acutely hazardous waste or meet other applicable RCRA requirements.

American LA France with L.A. 1049 Vineyard Avenue, approximately 0.12 miles southwest (downgradient) of the Site. This property was listed to be a RCRIS Small Quantity Generator with no violations. Based on the downgradient location of this property, it is not anticipated to environmentally impact the Site.

(Site) 1923 E. Avion Street. The Site was listed as a RCRIS Large Quantity Generator. The Site was noted to have a low priority violation in 1988 and another low priority violation in 1990. Both of the areas of violation were "TSD-Other Requirements". The 1990 violation was settled via a monetary payment; the 1988 violation was addressed with no reported fee.

- **Corrective Action Report (CORRACTS, 1.000 mile), March 27, 2001** - CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. Source: EPA.

(Site) GE Engine Services Inc, 1923 E. Avion Street The Site is listed to have a "Soils" event in 1996. No other information was provided.

California Environmental Record Sources

ASTM E 1527-00 requires review of the following state databases:

- **Bond Expenditure Plan (BEP, 1,000 mile), January 1, 1989** - DHS developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. The BEP is not updated. Source: California Department of Health Services (DHS).

(Site) GE Engine Services Inc, 1923 E. Avion Street No information was provided.

- **Cal-Sites Annual Workplan (AWP, 1,000 mile), November 8, 2000** - This database (formerly BEP), provided by Cal/EPA's Department of Toxic Substances Control (DTSC), identifies known hazardous substance sites that have been targeted for cleanup. Source: California Environmental Protection Agency (Cal/EPA).

GE Aircraft, Engine Maintenance, 2264 E. Avion Street, approximately 0.19 mile southeast (crossgradient) of the Site. This property is associated with, but is different from the Site. This property is only listed as a "Facility type: RP". This property is also listed as a CalSite and Cortese property. Based on the crossgradient location from the Site, this property is not anticipated to be an environmental concern.

Cal-Sites (formerly known as ASPIS) (1,000 mile), October 1, 2000 - The Cal-Sites database lists potential or confirmed hazardous substance release properties. Source: Cal/EPA DTSC.

GE Aircraft, Engine Maintenance, 2264 E. Avion Street, approximately 0.19 mile southeast (crossgradient) of the Site. This property is associated with, but is different from the Site. This property is listed as an active property in 1996. This property is also listed as an AWP and Cortese property. Based on the crossgradient location from the Site, this property is not anticipated to be an environmental concern.

USANG Ontario Air National Guard Station, 1280 S. Tower Drive, approximately 0.55 miles east-southeast (crossgradient) of the Site. This property status was listed as "Certified as having been remedied satisfactorily under DTSC" as of 9/11/2000. Based on remedied status of this property and the crossgradient location of this property, it is not anticipated to environmentally impact the Site.

- **California Hazardous Material Incident Report System (CHMIRS, 1,000 mile), December 31, 1994** - CHMIRS contains information on reported hazardous material incidents (accidental releases or spills). No update of this list is planned. Source: California Office of Emergency Services (OES).

Eleven listings were reported as having had spills of material to the ground or air between 1988 and 1991. These listings are considered one-time spill events and are not anticipated to environmentally impact the Site.

- **Cortese List (1 mile), April 1, 2001** - This database contains summary information pertaining to contaminated sites in California. The sites for the list are designated by the State Water Resources Control Board (leaking underground storage tanks [LUSTs]), the California Integrated Waste Management Board (SWF/LF [see below]), and the DTSC (Cal-Sites). Source: Cal/EPA/Office of

Emergency Information.

GE Aircraft, Engine Maintenance, 2264 E. Avion Street, approximately 0.19 mile southeast (crossgradient) of the Site. This property is associated with, but is different from the Site. This property is listed as being also a CalSite and having a leaking underground storage tank (LUST). The property is listed to be in pollution characterization. Based on the crossgradient location from the Site, this property is not anticipated to be an environmental concern.

Fluor Corporation, Flight Operations, 1150 Vineyard, approximately 0.25 miles south-southwest and downgradient of the Site. This property was noted to have a leaking underground tank that is closed by the regulatory agencies. Because of the closed status and downgradient location of this property, it is unlikely that the Site has been impacted by this property.

Lockheed Aircraft Service Comp, Ontario International Airport, approximately 0.65 miles north-northwest and crossgradient of the Site. This property was noted to have a leaking underground tank that is closed by the regulatory agencies. Because of the closed status and crossgradient location of this property, it is unlikely that the Site has been impacted by this property.

Wells Fargo Bank, 1862 Holt Boulevard, approximately 0.75 miles north (upgradient) of the Site. The property is noted to have a leaking underground storage tank. No other information is provided. Based on the distance of this property from the Site, it is unlikely that the Site has been impacted by this property.

Lockheed Air Terminal, Ontario International Airport, approximately 0.95 miles east-southeast and crossgradient of the Site. This property was noted to have a leaking underground tank that is closed by the regulatory agencies. Because of the closed status and cross-gradient location of this property, it is unlikely that the Site has been impacted by this property.

Smithford Products Company, 1401 S. Baker Avenue, approximately 0.45 miles southwest (downgradient) of the Site. This property was noted to have a leaking underground tank that is closed by the regulatory agencies. Because of the closed status and downgradient location of this property, it is unlikely that the Site has been impacted by this property.

Hertz Rent A Car, 2060, approximately 0.55 miles south-southeast (downgradient) of the Site. The property is noted to have a leaking underground storage tank. No other information is provided. Based on the downgradient location of this property from the Site, it is unlikely that the Site has been impacted by this property.

Leaking Underground Storage Tank Information System (LUST, 0.500 mile), August 7, 2001 - The LUST database is a list of reported leaking underground storage tank incidents. Source: State Water Resources Control Board (SWRCB).

Fluor Corporation, Flight Operations, 1150 Vineyard, approximately 0.25 miles south-southwest and downgradient of the Site. This property was noted to have a leaking underground tank that is closed by the regulatory agencies in 1992. Because of the closed status and downgradient location of this property, it is unlikely that the Site has been impacted by this property.

Smithford Products Company, 1401 S. Baker Avenue, approximately 0.45 miles southwest

(downgradient) of the Site. This property was noted to have a leaking underground tank that is closed by the regulatory agencies in 1987. Because of the closed status and downgradient location of this property, it is unlikely that the Site has been impacted by this property.

- **Proposition 65 Notification Records (NOTIFY 65, 1.000 mile), October 21, 1993** - The NOTIFY 65 database contains facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk. No update of this list is planned. Source: SWRCB.

There are no listed properties within 1.0 mile of the Site.

- **SWF/LF, Solid Waste Information System (SWIS, 0.500 mile), June 21, 2001** - This database is an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 2004 criteria for solid waste landfills or disposal sites. Source: California Integrated Waste Management Board.

Bridgestone/Firestone, Inc., 4000 E. Mission Boulevard, approximately 0.45 miles west and crossgradient of the Site. This property was reported to be a "major waste tire facility" and active. Based on the crossgradient direction of the property to the Site, it is unlikely that the Site has been impacted by this property.

- **Toxic Pits Cleanup Act Sites (TOXIC PITS, 1.000 mile), July 1, 1995** - This list identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. No update of this list is planned. Source: SWRCB.

There are no listed properties within 1 mile of the Site.

- **Hazardous Substance Storage Container Database (UST and Hist UST, 0.250 mile), August 1, 2001 and October 15, 1990 and Facility Inventory Database (CA FID UST, 0.250 mile), October 31, 1994** - These databases are historical listings of UST sites and active and inactive underground storage tank locations. Local and county sources have current UST information. Sources: SWRCB for UST/Hist UST, Cal/EPA for FID.

(Site) General Electric Aviation, 1923 E. Avion Street. The Site was listed as a Hist UST and CA FID UST property. The Site was reported to have 17 USTs. These include: 2-6,000 gallon diesel USTs, 9 "product" USTs (6,000, 8,000, 4,000, 7,000, 3-2,000, and 2-4,000 gallons) 5 "waste" USTs (250, 2-8,000 and 2-2,000 gallons) and a 550-gallon UST (unspecified contents). The Site was not listed to have had releases.

Federal Express Corp., 1801 E. Avion Ave., approximately 0.125 miles southwest and downgradient of the Site. No releases were reported for this property. Based on the downgradient direction of the property to the Site, it is unlikely that the Site has been impacted by this property.

Troy Isom Equipment, 4590 Mission Blvd., approximately 0.24 miles south-southwest and downgradient of the Site. No releases were reported for this property. Based on the downgradient direction of the property to the Site, it is unlikely that the Site has been impacted by this property.

- **Waste Management Unit Database System (WMUDS/SWAT, 0.5000 mile), April 1, 2000** - This system is used by the SWRCB for tracking and inventory of waste management units. WMUDS comprises the following databases: facility information, scheduled inspections information, waste management unit information, Solid Waste Assessment Test (SWAT) program information, SWAT report summary information, SWAT report summary data, Chapter 15 information and monitoring parameters, TPCA program information, RCRA program information, closure information, and interested parties information. Source: SWRCB.

There are no listed properties within 0.5 miles of the Site.

Non-ASTM Databases

The following non-ASTM databases were also checked by EDR:

- EPA Regional Offices Superfund Consent Decrees (1 mile)
- EPA Delisted NPL (1 mile)
- U.S. Department of Transportation Hazardous Materials Information Reporting System (target property)
- U.S. Department of Labor Mines Master Index Files (0.25 mile)
- U.S. Nuclear Regulatory Commission Material Licensing Tracking System (target property)
- EPA Federal Superfund Liens (target property)
- EPA PCB Activity Database System (target property)
- EPA RCRA Administrative Action Tracking System (target property)
- NTIS Records of Decision (1 mile)
- EPA/NTIS Toxic Chemical Release Inventory System (target property)
- EPA/NTIS Toxic Substances Control Act (target property)
- EPA/NTIS Facility Index System (target property)
- EPA/FTTS FIFRA/TSCA Tracking System (target property)
- SWRCB Aboveground Petroleum Storage Tank Facilities (target property)
- SWRCB Waste Discharge System (target property)
- California Hazardous Waste Information System (0.25 mile)
- California DTSC Drycleaners (0.25 mile)

No properties were listed on the above databases.

- **Cal/EPA Hazardous Waste Information System (HAZNET, 0.250 mile), December 31, 1999** - HAZNET provides hazardous waste manifest data extracted from copies of hazardous waste manifests. Inclusion in HAZNET implies that the facility properly disposed of hazardous waste.

Federal Express Corp., 1801 E. Avion Ave., approximately 0.125 miles southwest and downgradient of the Site. This property was noted to have disposed of hazardous wastes. No releases were reported for this property. Based on the downgradient direction of the property to the Site, it is unlikely that the Site has been impacted by this property.

Sky Cheff Inc., 1902 E. Avion, approximately 0.14 miles south-southeast (downgradient) of the Site. This property was noted to have disposed of hazardous wastes. No releases were reported for this property. Based on the downgradient direction of the property to the Site, it is unlikely that the Site has been impacted by this property.

- **Department of Health Services/San Bernardino County Fire Department (0.25 mile), August 13, 2001** – This listing includes underground storage tanks, medical waste handlers/generators, hazardous materials handlers, hazardous waste generators, and waste oil generators/handlers. The source of this database is the San Bernardino County Fire Department Hazardous Materials Division.

Federal Express Corp., 1801 E. Avion Ave., approximately 0.125 miles southwest and downgradient of the Site. This property was noted to have underground storage tanks, and to be a "special handler" and "special generator". No releases were reported for this property. Based on the downgradient direction of the property to the Site, it is unlikely that the Site has been impacted by this property.

Ontario Aircraft SVC Inc., 1049 S. Vineyard, approximately 0.125 miles southwest and downgradient of the Site. This property was noted to be a hazardous material handler and generator. No releases were reported for this property. Based on the downgradient direction of the property to the Site, it is unlikely that the Site has been impacted by this property.

Marriot In-Flite Service, 1902 E. Avion, approximately 0.14 miles south-southeast (downgradient) of the Site. This property was noted to be a "special handler" and "special generator". No releases were reported for this property. Based on the downgradient direction of the property to the Site, it is unlikely that the Site has been impacted by this property.

- **California Regional Quality Control Board SLIC (0.5 mile), June 11, 2001** – SLIC contains information regarding properties that have impacted groundwater or have the potential to impact groundwater. The source of this database is the California RWQCB.

GE Engine Services (unlisted address). This listing was discovered in the unmappable properties listing. No address is associated with this listing. It is not known if this listing is in regards to the 1923 GE facility (three buildings of which are the Site) or the 2264 GE facility (not the Site). A soil and groundwater investigation is reported to be ongoing for solvents and TPH with the Department of Toxic Substances Control. Based on this information, it appears that this listing is in regards to the 2264 E. Avion GE facility. See the Annual Work Plan listing for GE 2264 E. Avion above. Based on the crossgradient location of this property to the Site, it is not anticipated to environmentally impact the Site.

MACTEC reviewed the "unmappable" properties that are listed in the EDR Report. These are reported as unmappable because of incorrect, or incomplete address information. Five cases (beside the GE SLIC case discussed above) are listed as CA SLIC cases at Ontario Airport. These are as follows:

Lockheed (O), Ontario Airport. This property was noted to have "post investigation/remediation monitoring" for a solvent release to soil. According to Meredith Boli and Associates, Lockheed's facilities were located approximately 0.4 miles northwest of the Site. Based on the crossgradient location of this property, it is not anticipated to be environmental concern.

Northrop (O), Ontario Airport. According to Meredith Boli and Associates (MBA), Northrop formerly operated the northeast portion of the Site (GE Engine Services), an area called "Hangar 4". MBA states that possible contaminants include phenol, chromium and fluorine. According to the EDR report, this property was noted to have an "initial investigation underway" for an unknown release to an unknown area.

Aerojet (O), Ontario Airport. According to MBA, this property is approximately 0.4 miles northeast of the Site. This property was noted to have a "closed" investigation for trichloroethylene (TCE). Because the investigation has been closed, the depth to groundwater (300-ft bgs) and the distance from the Site (across the airport runway at the current United States Post Office) this property is not anticipated to be an environmental issue.

Douglas Aircraft Company, Ontario Airport. According to MBA, Douglas formerly operated the southwest portion of the Site (GE Engine Services). The actual building are not known. MBA states that possible contaminants include phenol, chromium and fluorine. According to the EDR report, this property was noted to have an "initial investigation underway" for an unknown release to an unknown area.

California Air National Guard, Ontario Airport. According to MBA, this property is approximately 1,000 feet east of the Site. This property was noted to have a "closed" investigation for trichloroethylene (TCE). Because the investigation has been closed, this property is not anticipated to be an environmental issue.

6.0 SUMMATION

6.1 Site History

The following summarizes MACTEC historical research of the Area of Focus:

- The first two buildings, Hangars 1 and 2, at the Site were constructed in the late 1940s.
- In approximately 1950, Northrop Aircraft Company reportedly began manufacturing operations on the north side of the current Site in present day Hangar 1.
- In 1951, construction of Hangar 3 was completed.
- Prior to 1953 Douglas Aircraft began operations at the Site in Hangar 2 or 3.
- In 1953 Hangar 4 was constructed.
- In approximately 1955, GEES moved their operations to Ontario Airport, Douglas and Northrop vacated the Site.
- From 1955 to 1980, Lockheed Aircraft reportedly occupied Hangar 4.
- In 1980, GEES moved its operations into Hangar 4.
- In 1985 the Site was connected to the domestic sewer system.
- In 1990 Hangar 4 was connected to the Sites domestic sewer line.

6.2 Site Investigation

MACTEC conducted inspections on October 10 and 18, 2001 and November 4 and 20, 2002 that included walking the grounds of the Area of Focus, performing a drive-by reconnaissance of the adjacent properties, and conducting a limited walk through inspection of the grounds of the Site. MACTEC noted the following:

- During the inspection, no distressed vegetation or evidence of clarifiers or USTs was observed.
- Evidence of groundwater monitoring wells was not observed in the Area of Focus.
- Sealed boreholes were observed in the area of the former EDSA and Test Cell, west and southwest of Hangar 4.
- Chemical storage was observed in the Cold Storage Room in Hangar 4. Chemicals were stored in a neat and orderly fashion in small containers, generally < 1 gallon.. Not all chemicals were in chemical

storage cabinets. Some were stored on open shelving. Flammable chemicals were stored in flammable storage cabinets. The concrete floor was sealed appeared to be in good condition without evidence of spills or staining.

- During the November 2002 visits, Mactec re-inspected the Chemical Storage Room. Chemical storage had been removed and there was no evidence of chemical spills or staining in the vacated room.
- During the October 2001 visit, one drum of oil/fuel filters was observed at the Scrap Yard adjacent to Hangar 4. This waste appeared to be properly labeled. Solid wastes are compacted on site. Scrap metal and wood are recycled.
- During all visits, wastes appeared to be properly managed and disposed.
- MACTEC noted pad-mounted electrical transformers at the Site. These transformers are owned and operated by Southern California Edison (SCE). SCE maintains that none of their transformers contain PCBs. MACTEC did not observe any leaks or stains.
- The EDR report indicates that 17 USTs are known to have existed at the GEES Site. No USTs have been identified as being in or near Hangar 4.
- The GEES Site, but not specifically Hangar 4, was listed on the ERNS, Cal-Sites, Cortese, LUST and CA SLIC databases (Section 5.1 and Appendix D). These listings are associated with the historical environmental issues previously discussed. Several offsite properties were listed on various regulatory environmental databases. Based on MACTEC's review, these properties are not anticipated to environmentally impact the Site.
- One up-gradient site was listed in the EDR report as having a leaking underground storage tank. Wells Fargo Bank, 1862 Holt Boulevard, is approximately 0.75 miles north (up-gradient) of the Site. The property is noted to have a leaking underground storage tank that leaked 834 pounds of an aqueous solution with less than 10% total organic residues. No additional data was provided. Based on the distance of this property from the Site and distance to groundwater in the area, it is unlikely that the Site has been impacted by this property.

6.4 Recognized Environmental Conditions

MACTEC's investigation identified the following recognized environmental conditions (RECs), as defined by ASTM in the Area of Focus.

- In 1956, Northrop connected Hangar 4 to a cesspool. Hangar 4 remained connected to the cesspool until it was connected to the Site's sanitary sewer system in 1990. Mr. David Lu, an Environmental Manager formerly employed with GEES, stated that a septic tank/leach field existed for Hangar 4. Mr. Lu could not recall the location of this septic tank/leach field. Closure or sampling data for the leach field and septic system could not be located at the time of the ESA.

1.0 SUMMARY

At the request of Los Angeles World Airports (LAWA), Earth Tech, Inc. (Earth Tech) has performed a Phase I Baseline Environmental Site Assessment (ESA) in accordance with the Scope of Services detailed in Section 2.2 and in general accordance with the most recent scope and limitations of ASTM Standard Practice E1527-00 of the East Avion Complex facility located at 1049 South Vineyard Avenue, Ontario, California (the subject property). Any exceptions to, or deletions from, the ASTM Practice are described in Section 2.2 of this report.

This assessment has revealed no evidence of "recognized environmental conditions" (as that term is defined in ASTM Standard Practice E1527-00) in connection with the Property, with the exception of the following (a summary table to the Phase I Baseline ESA is included as Table 1 following this section):

- **HISTORICAL PROPERTY USE:** The subject property was developed in the 1940s as a part of the Ontario Airport. The configuration of the buildings on the subject property has changed several times over the years. The exact nature of operations on the subject property are not known, but are assumed to include aircraft repair and maintenance activities. Spillage of petroleum hydrocarbons and solvents used during these activities may have impacted the subsurface.
- **UNDERGROUND STORAGE TANKS:** An 8,000-gallon underground storage tank was removed from the subject property in August 1999. The UST was discovered during a renovation. Soil samples were collected from beneath each end of the UST. The soil samples were analyzed for total petroleum hydrocarbons, benzene, toluene, ethylbenzene, xylenes, and MTBE. No concentrations of these compounds were detected in the soil samples collected. The excavation was backfilled with clean native soil and import fill and compacted. The San Bernardino County Fire Department issued a letter requiring no further action on September 10, 1999.
- **ASBESTOS-CONTAINING MATERIALS:** Non-friable ACMs exist on the subject property. These materials do not represent a health risk in their current state. However, these materials could cause a health risk, if damaged or disturbed.
- **LEAD-BASED PAINT:** Lead-based paint was found in good condition. These materials do not represent a health risk in their current state. However, these lead-based materials could cause a health risk, if damaged or disturbed.
- **GROUNDWATER CONTAMINATION ON ADJACENT PROPERTY:** Known releases at the GE facility located adjacent to the east of the subject property are suspected to have impacted groundwater. It is possible that impacted groundwater from the adjacent property has migrated or could migrate beneath the subject property.

It is Earth Tech's professional opinion that further investigation will be required in order to evaluate the identified "recognized environmental conditions".

The standard professional practices that Earth Tech conducted to determine if any recognized environmental conditions existed in connection with the Property included, among other things:

- A visual inspection of the exterior and the interior of the subject property.
- Interviews with selected individuals who might have knowledge of such recognized environmental conditions,
- A review of readily available historical aerial photographs, Sanborn Fire Insurance Maps, building permits and historical topographic maps,
- A drive-by inspection of accessible adjacent parcels, and
- A review of a database search of selected Federal and State environmental databases for indications of the presence of hazardous substances on the subject property or on nearby parcels from which those substances might migrate to the subject property.

This report is based upon the Scope of Services, and is subject to the Limitations and Restrictions, defined herein. It has been prepared for the exclusive use of LAWA, its tenants, and its legal counsel. No other person or organization is entitled to rely upon any part of it without the prior written consent of Earth Tech. LAWA may release or authorize the release of all or part(s) of this report to third parties; however, such third party in using or relying on this report agrees that it shall have no legal recourse against Earth Tech or its parent or subsidiaries, and shall indemnify and defend them from and against all claims arising out of or in conjunction with such use or reliance. Please refer to Sections 2.4, 2.5 and 2.6 for a detailed description of the Limitations and Restrictions.

					Groundwater Contamination on Adjacent Property	Suspected impacted groundwater, possible migration to subject property	Monitor investigation being conducted	N

2.0 INTRODUCTION

2.1 PURPOSE

The purpose of this Phase I Baseline Environmental Site Assessment (ESA) is to identify, to the extent feasible pursuant to the processes prescribed in ASTM's Standards on Environmental Site Assessments for Commercial Real Estate (ASTM E-1527), recognized environmental conditions in connection with the subject property. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on the subject property under conditions that indicate an existing release, a past release, or a material threat of release of any hazardous substances or petroleum products into the structures on the subject property or into the ground, groundwater, or surface water of the subject property. The term recognized environmental conditions includes hazardous substances or petroleum products even under conditions in compliance with laws, but is not intended to include de minimis conditions that generally do not present a material risk of harm to the public health or the environment and that generally would not be the subject of an enforcement action, if brought to the attention of appropriate governmental agencies (ASTM E1527-00).

2.2 DETAILED SCOPE OF SERVICES

Earth Tech has conducted this Phase I Baseline ESA in accordance with the ASTM's Standards on Environmental Site Assessments for Commercial Real Estate (ASTM E-1527, most recent version). The following scope of services was performed:

2.2.1 Current Site Condition

Earth Tech assessed the current site condition by accomplishing the following tasks:

Site Reconnaissance: Earth Tech personnel visited the site and conducted a site reconnaissance to evaluate the current condition of the site. The following items were assessed:

- Current Use and Occupants
- Environmental Permits, Violations/Citations
- Hazardous Materials Use/Storage
- Hazardous Wastes Generation/Storage
- Underground and Aboveground Storage Tanks
- Sumps, Impoundments, Lagoons, Clarifiers
- Possible PCB Containing Materials (Transformers, Ballasts, etc.)
- Evidence of Stains/Spillage/Distressed Vegetation
- Possible Sensitive Receptors (Wells, Streams, etc.)
- Asbestos-Containing Materials
- Lead Based Paint

Adjoining Properties Review: During the site reconnaissance, the site inspector visually evaluated surrounding sites for possible hazardous material contamination with respect to their potential impact to the subject property. The adjacent property survey was limited to observations made from the subject site and public property fronting the adjacent establishments. The vicinity reconnaissance was limited to directly adjacent properties.

2.2.2 Records Review

Earth Tech conducted the following record reviews:

Standard Environmental Record Sources: Earth Tech contracted Environmental Data Resources, Inc. (EDR) to conduct a database review of the following databases.

Database	ASTM Required?	Radius	Description
Federal Databases			
CERCLIS	Yes	½ mile	Comprehensive Environmental Response, Compensation, and Liability Information System
ERNS	Yes	Target Property	Emergency Response Notification System
NPL	Yes	1 mile	National Priorities List (Superfund)
Delisted NPL	Yes	1 mile	National Priorities List (Superfund)
RCRIS Generators	Yes	Target/Adjacent	Resource Conservation and Recovery Information System
RCRIS – TSD	Yes	½ mile	RCRIS – Transfer, Storage, and Disposal Facilities
CORRACTS	Yes	¼ mile	Corrective Action Report
CONSENT	No	1 mile	Superfund (CERCLA) Consent Decrees
FINDS	No	Target Property	Facility Index System/Facility Identification Initiative Program Summary Report
HMIRS	No	Target Property	Hazardous Materials Incident Report System
MLTS	No	Target Property	Material Licensing Tracking System
NPL Liens	No	Target Property	Federal Superfund Liens
PADS	No	Target Property	PCB Activity Database
RAATS	No	Target Property	RCRA Administration Action Tracking System
ROD	No	1 mile	Records of Decision
TRIS	No	Target Property	Toxic Release Inventory System
TSCA	No	Target Property	Toxic Substances Control Act
MINES	No	¼ mile	Mines Master Index File
State/Local Databases			
BEP	Yes	1 mile	Bond Expenditure Plan (Former State Priority List Database)
CALSITES (AWP)	Yes	1 mile	Annual Workplan (State Priority List)
CALSITES (ASPIS)	Yes	1 mile	Calsites
CHMIRS	Yes	Target/Adjacent	California Hazardous Material Incident Report System
Cortese	Yes	1 mile	Cortese List
LUST	Yes	½ mile	Leaking Underground Storage Tank Information System
Notify 65	Yes	1 mile	Proposition 65
SWF/LF (SWIS)	Yes	½ mile	Solid Waste Information System
Toxic Pits	Yes	1 mile	Toxic Pits

Database	ASTM Required?	Radius	Description
UST	Yes	¼ mile	Hazardous Substance Storage Container Database
FID	Yes	¼ mile	Facility Inventory Database (USTs)
WMUDS/SWAT	Yes	½ mile	Waste Management Unit Database
AST	No	Target Property	Aboveground Petroleum Storage Tank Facilities
HAZNET	No	¼ mile	Hazardous Waste Information System

Additional Environmental Record Searches: The following additional environmental records were researched by Earth Tech personnel:

- **2003 Munger Map Book:** Map of oilfield activity in California
- **Alquist-Priolo Fault Zone Review:** Reviewed Alquist-Priolo fault zone information available at the city's Planning Department

Physical Setting Review: Earth Tech reviewed available geologic information to evaluate the topography, geology, and hydrogeology of the subject property.

Historical Use Review: The following historical sources were reviewed to identify the historical use of the subject property:

- **Historical Aerial Photographs:** Earth Tech reviewed digital copies of aerial photographs with coverage of the subject property. These digital copies were obtained through contract with EDR.
- **Historical Topographic Maps:** Earth Tech reviewed copies of historical topographic maps with coverage of the subject property. These copies were obtained through contract with EDR.
- **Sanborn Fire Insurance Maps:** Earth Tech reviewed the available digital copies of Sanborn maps with potential coverage of the subject property. No Sanborn maps including the subject property were found.
- **City Directory Abstract:** Earth Tech reviewed an abstract of city directory listings researched at approximate five-year intervals from 1922 to 2002. This city directory abstract was obtained through contract with EDR.
- **Building Record Review:** Building permits and plans on file with the city of Ontario were reviewed.

Historical use review of the vicinity was limited to review of adjacent parcels through review of historical aerial photographs and city directories.

2.2.3 Report Preparation

An ESA report was prepared in accordance with the outline provided in the ASTM E1527-00 guidance.

2.3 SIGNIFICANT ASSUMPTIONS

The following assumptions were made in the execution of this Phase I Baseline ESA:

- This Phase I Baseline ESA is being conducted prior to re-leasing of the property by LAWA.
- Groundwater flow was estimated to be southwesterly based upon information from the EDR report.

2.4 LIMITATIONS AND EXCEPTIONS

The following items are excluded from the scope of the ASTM E-1527 ESA Standard Practice, and were excluded from the scope of this ESA:

- Lead in Water Survey
- Radon Survey
- Wetlands Analysis
- High Voltage Power Lines (EMF) Survey
- Regulatory Compliance Audit
- Ecological Resources Study
- Endangered Species Analysis
- Indoor Air Quality Study
- Cultural & Historical Resources Review
- Industrial Hygiene/Health & Safety Audit

2.5 SPECIAL TERMS AND CONDITIONS

Representatives, Warranties and Covenants

EARTH TECH makes no warranty, either expressed or implied, as to its findings, opinions, recommendations, specifications, or professional advice except that these were promulgated after being prepared in accordance with generally accepted standards of care and diligence normally practiced by recognized consulting firms performing services of a similar nature.

The information contained in this report has received appropriate technical review and approval. The conclusions and recommendations presented represent professional judgments and are based upon the findings from the investigation identified in the report and the interpretation of such data based on our experience and background. This acknowledgment is made in lieu of all warranties, either expressed or implied.

All project documents prepared or furnished to LAWA may be based on information outside EARTH TECH's control. EARTH TECH does not warrant, expressed or implied, the accuracy thereof.

Scope of Investigation

The scope of this investigation is limited to the scope of services presented in Section 2.2.

2.6 RELIANCE

All documentation furnished to LAWA is intended for the benefit of LAWA and its tenants. Reuse by others is bound by the contract between LAWA and EARTH TECH. Any reuse without the specific written consent of EARTH TECH for the specific purpose intended will be at user's sole risk and without liability and legal exposure to EARTH TECH. If requested, Earth Tech can issue "Reliance Letters" to others. In this case, reliance on the report will be subject to the terms and conditions specified in the reliance letter.

LAWA agrees to indemnify and hold EARTH TECH harmless from any and all liabilities, losses, costs, or expenses suffered by EARTH TECH in connection with LAWA's unauthorized reuse of project documents.

3.0 SITE DESCRIPTION

3.1 LOCATION AND LEGAL DESCRIPTION

3.1.1 Property Name and Address

East Avion Complex
1049 South Vineyard Avenue
Ontario, California 91761

3.1.2 Land Use Zoning: C4 – Airport Service Commercial

3.2 SITE AND VICINITY CHARACTERISTICS

The subject property includes approximately 10.87 acres. The subject property is developed with four buildings. One of the buildings is occupied by an aircraft service equipment company, two of the buildings are used for aircraft storage, and one building is used for airport maintenance storage. The northwest corner of the property is paved and used for automobile parking. The remainder of the property is used for vehicle and equipment storage.

Access to the property is provided from South Vineyard Avenue to the west and from the airport to the north.

The immediate vicinity is dominated by the Ontario International Airport and associated facilities.

3.3 DESCRIPTION OF STRUCTURES

There are four structures located on the subject property.

- **Building 2 (1049 South Vineyard Avenue)** is located at the northwest corner of the subject property. The building has a floor area of approximately 17,200 square feet. Office areas located on the east and west sides of the hangar are finished with drywall, drop ceilings, vinyl floor tile and carpeting.
- **Building 3 (1049-A Vineyard Avenue)** is located just to the east of Building 2. The building has a floor area of approximately 10,600 square feet. An office area located on the north side of the hangar is finished with drywall, drop ceilings, vinyl floor tile and carpeting.
- **Building 5 (1049-C Vineyard Avenue)** is located just to the south of Building 3. The building has a floor area of approximately 10,600 square feet. There is no office area located within Building 5.

- **Maintenance Storage Building (No Address).** This building is an open-sided metal structure on a concrete slab foundation. The maintenance building has a floor area of approximately 6,300 square feet.

3.4 CURRENT USES OF THE PROPERTY

- **Building 2:** ASIG, which conducts maintenance on aircraft support equipment.
- **Buildings 3 and 5:** Guardian Air for aircraft storage.
- **Maintenance Building:** ONT airport for maintenance materials storage.

Additionally, the southern portion of the property is used by ASIG and Evergreen for vehicle and equipment storage.

3.5 CURRENT USES OF ADJOINING PROPERTIES

The subject property is surrounded as follows:

North,
Northeast and
Northwest: Ontario International Airport

East and
Southeast: General Electric Company, 1923 East Avion Street

South: East Avion Street, followed by Sky Chefs, Inc.

Southwest: Intersection of East Avion Street and South Vineyard Avenue

West: South Vineyard Avenue and the DOA Command Center Building

General Electric Company, at 1923 East Avion Street is included on the CERCLIS-NFRAP, CORRACTS, RCRIS-TSD, RCRIS-LQG, RCRIS-SQG, BEP, CA FID, HIST UST, DEHS Permit System, ERNS, and CA SLIC databases. According to the BEP listing, approximately 6,000 gallons of hazardous waste were disposed of in dry wells on this site. Testing has indicated that soil beneath the GE facility is contaminated with solvents. Clean-up is being conducted by the responsible parties, General Electric and the City of Los Angeles Department of Airports. The CORRACTS database indicates that an RFI workplan for soil was approved in 1993. As of 1997, human exposures were under control, but unacceptable migration of contaminated groundwater was observed or expected. The CA SLIC database indicates that groundwater monitoring wells were being installed. Due to the potential migration of contaminated groundwater, this facility is considered to represent a recognized environmental condition.

4.0 USER-PROVIDED INFORMATION

4.1 TITLE RECORDS

The client provided no title records for Earth Tech's review.

4.2 ENVIRONMENTAL LIENS

The client and property manager did not indicate any outstanding environmental liens against the subject property.

4.3 SPECIALIZED KNOWLEDGE

The client and property manager did not indicate specialized knowledge of the subject property with respect to this assessment.

4.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The client did not divulge any information regarding a valuation reduction of the subject property for environmental issues.

4.5 OWNER, PROPERTY MANAGER AND OCCUPANT INFORMATION

The owner of the subject property is LAWA. The occupants of the subject property include Aircraft Service International Group (ASIG), Guardian Air, and Evergreen.

4.6 REASON FOR PERFORMING THE PHASE I

Earth Tech understands that this Phase I Baseline ESA has been performed in preparation for the releasing of the subject property by LAWA.

4.7 OTHER

LAWA provided the following reports associated with the subject property for Earth Tech review:

UST Closure Report – Ontario Aircraft Services, Ontario International Airport, Ontario, CA. September 10, 1999. Camp Dresser & McKee, Inc.

This report indicates that an 8,000-gallon underground storage tank, with unknown contents, was removed from the subject property in August 1999. The UST was discovered during a renovation. Soil samples were collected from beneath each end of the UST. The soil samples were analyzed for total petroleum hydrocarbons (as diesel), benzene, toluene, ethylbenzene, xylenes, and MTBE. No concentrations of these

compounds were detected in the soil samples collected. The excavation was backfilled with clean native soil and import fill and compacted. The San Bernardino County Fire Department issued a letter requiring no further action on September 10, 1999.

Earth Tech's Professional Opinion: No further assessment is recommended in association with the former UST

5.0 RECORDS REVIEW

5.1 STANDARD ENVIRONMENTAL RECORD SOURCES

Earth Tech contracted Environmental Data Resources, Inc. (EDR) of Southport, Connecticut to perform a regulatory database review for the subject property as well as surrounding properties located up to one mile away from the subject property.

SUBJECT PROPERTY

The subject property was identified on the following database reviewed by EDR (the databases searched are summarized in Section 2.2.2):

RCRIS, FINDS – The subject property is included on the RCRIS list under the name "American La France with L A" as a small-quantity hazardous waste generator with no reported violations. This facility is also included on the FINDS database due to the RCRIS listing. The regulated generation of hazardous waste at the subject property is not considered to be a recognized environmental condition.

HAZNET, San Bernardino County Permit – The subject property is listed on the Haznet list under the name American La France of Los Angeles as having disposed of aqueous solution with organic residues, and waste oil and mixed oil. This company is also shown to be permitted as a hazmat handler and as a generator by the County of San Bernardino Department of Environmental Health and Safety. Both of these permits are shown to be inactive. The subject property address is also included on the San Bernardino County list under the name ASIG. This facility has an active hazmat handler permit and inactive generator permit. The permitted generation of hazardous waste from the subject property is not considered to be a recognized environmental condition.

VICINITY

The following sections summarize the results of the database search of the surrounding area.

NPL Sites:

The National Priorities List (NPL), also known as the Superfund List, is an EPA listing of uncontrolled or abandoned hazardous waste sites. These sites are targeted for possible long-term remedial action under the Superfund Act.

TABLE 2
NPL Sites within 1 Mile

Facility Name	No. in EDR Report	Address	Proximity	Description
None	N/A	N/A	N/A	N/A

There are no NPL sites located within a **one-mile radius** of the subject property.

CERCLIS Sites:

The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) database is a comprehensive listing of known or suspected uncontrolled or abandoned hazardous waste sites. These sites have either been investigated or are currently under investigation by the Federal EPA for the release or threatened release of hazardous substances. Once a site is placed in CERCLIS, it may be subjected to several levels of review and evaluation and ultimately placed on the NPL.

**TABLE 3
CERCLIS Sites within 1/2 Mile**

Facility Name	No. in EDR Report	Address	Proximity	Description
None	N/A	N/A	N/A	N/A

There are no active CERCLIS sites located within a 1/2-mile radius of the subject property. The adjacent GE Engine Services Inc. site at 1923 East Avion Street is included on the CERCLIS-NFRAP (No Further Remedial Action Planned) database. See the discussion of this facility in Section 3.5.

TSDF/SWIS/SWAT Sites:

The Treatment, Storage, and Disposal Facility (TSDF) database contains information pertaining to facilities that either treat, store, or dispose of hazardous waste. The Solid Waste Information System (SWIS) database contains information pertaining to all permitted active and inactive solid waste landfills and processing facilities located within the state of California. The Solid Waste Assessment Test (SWAT) database contains information pertaining to solid waste landfills from which there is a known migration of hazardous waste.

**TABLE 4
TSDF/SWIS/SWAT Sites within 1/2 Mile**

Facility Name	No. in EDR Report	Address	Proximity	Description
GE Engine Services Inc.	C10	1923 E. Avion St.	Adjacent to the east Crossgradient	TSDF. Violations exist

There are no SWIS/SWAT sites within a 1/2-mile radius of the subject property. There is one TSDF site adjacent to the subject property. The GE Engine Services Inc. facility located adjacent to the east of the subject property is listed as having two violations, which were brought into compliance in 1988 and 1990. See the discussion of this facility in Section 3.5.

CORRACTS Sites:

CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally defined corrective action core events have occurred for every handler that has had corrective action activity.

**TABLE 5
CORRACTS Sites within 1 Mile**

Facility Name	No. in EDR Report	Address	Proximity	Description
GE Engine Services Inc.	C10	1923 E. Avion St.	Adjacent to the east Crossgradient	Current human exposures under control. Unacceptable migration of contaminated groundwater is observed or expected.

There is one CORRACTS site within a **1-mile radius** of the subject property. The GE site was assigned a low corrective action priority in 1988. The RFI Workplan was approved in 1993. In 1997, the EPA verified that current human exposures were under control, however, unacceptable migration of contaminated groundwater was observed or expected. See the discussion of this facility in Section 3.5.

ERNS/CHMIRS Sites:

The Emergency Response Notification System (ERNS) is a national computer database system that is used to store information on the sudden and/or accidental release of hazardous substances, including petroleum, into the environment. The ERNS reporting system contains preliminary information on specific releases, including the spill location, the substances released, and the responsible party. Please note that information in the ERNS report pertains only to past releases. The CHMIRS (California Hazardous Material Incident Response System) is the California equivalent to the ERNS.

There are no ERNS/CHMIRS sites located **adjacent** to the subject property.

RCRA/RCRIS Generator (Small or Large Quantity) Sites:

The RCRIS databases contain information pertaining to facilities which either generate between 100 kg and 1,000 kg of hazardous waste per month (Small Quantity Generators) or more than 1,000 kg of hazardous waste per month (Large Quantity Generators), or meet other applicable requirements of the Resource Conservation and Recovery Act (RCRA).

**TABLE 6
RCRIS Generators Adjacent to the Subject Property**

Facility Name	No. in EDR Report	Address	Proximity	Description
GE Engine Services Inc.	C10	1923 E. Avion St.	Adjacent to the E crossgradient	Large quantity generator. Small quantity generator. No violations found.

There is one RCRIS (Small or Large Quantity) Generator located **adjacent** to the subject property. The GE Engine Services Inc. facility is listed as a large quantity generator and as

a small quantity generator with not reported violations. See the discussion of this facility in Section 3.5.

CALSITES (HWS) Sites:

The California Calsites List contains information pertaining to State Hazardous Waste Sites (HWS). Sites formerly listed in the Annual Workplan (AWP), the Abandoned Sites Program Information System (ASPIS), and the Bond Expenditure Plan (BEP) are now included in the CALSITES database.

**TABLE 7
CALSITES (HWS) Sites within 1 Mile**

Facility Name	No. in EDR Report	Address	Proximity	Description
GE Aircraft, Engine Maint	25	2264 Avion	½-1 mile ESE crossgradient	AWP Active Site
USANG Ontario Air National Guard	26	1280 S. Tower Dr.	½-1 mile ESE crossgradient	Certified as having been remediated satisfactorily under DTSC.

There are two CALSITES (HWS) facilities located within a **1-mile radius** of the subject property. The GE Aircraft Engine Facility is located over ½ mile to the east-southeast, crossgradient from the subject property. This facility is listed as an Annual Workplan Active site with suspected groundwater contamination. The Air National Guard site is listed as having been satisfactorily remediated under the Department of Toxic Substances Control (DTSC). Given the distance and/or status of these facilities, they do not appear likely to negatively impact the subject property.

LUST Sites:

The California Leaking Underground Storage Tank (LUST) List contains information pertaining to reported leaking underground storage tanks within the state of California. EDR has obtained the LUST information from the State Water Resources Control Board (WRCB) and the Regional Water Quality Control Board (RWQCB) overseeing the region containing the subject property.

**TABLE 8
LUST Sites within ½ Mile**

Facility Name	No. in EDR Report	Address	Proximity	Description
Fluor Corp. Flight Operations	D14	1150 Vineyard	1/8-1/4 mile SSW downgradient	Jet fuel release has only impacted soil. Case closed.
Hertz Rent A Car	23	2060 Emporia	1/2-1 mile SE crossgradient	Gasoline release has only impacted soil. Case closed.
Smithford Products Company	24	1401 Baker	1/2-1 mile SSW downgradient	Gasoline release has only impacted soil. Case closed.

Three LUST sites were identified within a ½-mile radius of the subject property.

All three of these sites have only impacted soil and have been closed, and therefore do not appear likely to negatively impact the subject property.

CORTESE Sites:

The California Cortese List, also known as the Hazardous Waste and Substances Sites List, contains summary information pertaining to contaminated sites within the state of California. Contaminated wells, leaking underground storage tanks, and sanitary landfills are among the facilities contained in the Cortese List. Cortese List information often duplicates information contained in other lists (i.e. LUST, CALSITES, etc.).

The CORTESE sites identified within a 1-mile radius of the subject property are discussed in detail under the other databases reviewed.

UST Sites:

The California Underground Storage Tank (UST) List is a comprehensive listing of registered underground storage tanks within the state of California. The data comes from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

TABLE 9
UST Sites Adjacent to the Subject Property

Facility Name	No. in EDR Report	Address	Proximity	Description
General Electric Co. - Aviation	C7, C12	1923 E. Avion St.	Adjacent to the E crossgradient	Active UST location Historical UST database indicates 17 USTs were located on this site..

There is one registered UST site located **adjacent to** the subject property. See the discussion of this facility in Section 3.5.

5.2 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

5.2.1 Division of Oil and Gas: Earth Tech reviewed the oil and gas well activity overseen by the California Department of Natural Resources, Division of Oil and Gas (DOG). The Munger Map Book contains location and production information for all regulated oil and gas wells in the state of California. No oil or gas well appears to be located on the subject property (Page W-68, Munger Map Book, 2003).

5.2.2 San Bernardino County Fire Department Hazardous Materials Division: A request was made to the San Bernardino County Fire Department, Hazardous Materials Division for any information on file for the subject property. The file for the subject property included a closed business plan for Ontario Aircraft Service (OAS, the former tenant) and an existing business plan for ASIG. This business plan, dated January 24, 2004, indicated that

chemicals stored on site include: oxygen, acetylene, ethanediol, lavatory antifreeze, desolve, motor oil, hydraulic fluid, and lubricant. All materials are stored in containers of 55-gallons or less. Wastes reported on site include: waste batteries, waste ethylene glycol, and waste oil. All materials are stored in containers of 55-gallons or less. The business plan was accepted by the County Fire Department on April 12, 2004.

5.3 PHYSICAL SETTING SOURCES

5.3.1 Topography

The subject property is within the U.S. Geological Survey map, 7.5-Minute Guasti, California Quadrangle. The elevation of the subject property is approximately 913 feet above mean sea level (MSL). The land in the vicinity of the subject property slopes gently toward the south.

5.3.2 Geology

The Site is situated within the Chino basin, within a structural depression that has been filled with material eroded from the surrounding mountain ranges. To the northeast are the San Gabriel Mountains, the Red Hill Fault, and the San Jose Fault. The Chino Hills and the Santa Ana Mountains are located to the west and the Santa Ana River is to the south (CDM, 1999).

The Site is underlain by alluvium deposited from erosion of the surrounding mountains during the Holocene and Pleistocene ages. The alluvium overlies Mesozoic age crystalline rocks of the southern California Batholith (CDM, 1999).

5.3.3 Hydrology

The Site lies within the Chino Groundwater Basin. The Chino Basin is bounded by the San Gabriel Mountains, San Bernardino Mountains, Santa Ana Mountains, and the Puente Hills (CDM, 1999).

Groundwater information from properties within one mile of the subject property indicate that groundwater occurs at a depth of approximately 250 feet bgs with a gradient toward the southwest (EDR, 2004).

5.3.4 Earth Quake Hazard Zones

The subject property is not located within a special fault-rupture hazard zone, as defined by the Alquist-Priolo Earthquake Fault Zoning Act of 1994.

5.3.5 Radon Gas

Earth Tech reviewed the results of the Radon Gas Study conducted by the EPA and the State of California in 1990. Of the 18 sites tested within San Bernardino County, 100% had less than 4 pCi/L of radon activity (the US EPA recommended limit for no action), with an average activity of 0.678 pCi/L.

5.3.6 Flood Plains

The subject property is not located in a 100-year flood zone, but is located within a 500-year flood zone (FEMA Flood Plain Panel 06071C8636F).

5.4 HISTORICAL USE INFORMATION ON THE PROPERTY

The following historical sources were referenced:

Building Records: Building records were reviewed at the City of Ontario Building Department.

Historical Aerial Photographs: Aerial photographs from the following years were reviewed: 1938, 1949, 1953, 1968, 1977, 1989, 1994, and 2002. Digital copies of aerial photographs were obtained from the UCSB MIL Collection through contract with EDR, Inc.

Historical Topographic Maps: Topographic maps from the following years were reviewed: 1941, 1954, 1966, 1973, and 1981. Copies of topographic maps were obtained through contract with EDR, Inc.

Sanborn Maps: The National Sanborn Collection was searched under contract with EDR. No Sanborn maps with coverage of the subject property were available for review.

City Directory Abstract: Historical city directories were searched at approximate five-year intervals from 1922 to 2002 through contract with EDR. The only listings for the subject property address was in 1985 and just listed as "Building".

The composite timeline compiled from these historical sources follows.

Year	Source	Discussion
1938	Aerial Photo	The subject property and adjacent properties appear to be agricultural land.
1941	Topographic Map	The subject property and adjacent properties are shown as undeveloped.
1949	Aerial Photo	The subject property is developed with several small buildings that appear to be part of the Ontario Airport. Airport runways are seen to the north. Two hangar-type buildings are seen to the east. Small buildings are seen to the south. The property to the west is undeveloped.

Year	Source	Discussion
1953	Aerial Photo	The subject property is developed with several small buildings that appear to be part of the Ontario Airport. Aircraft are parked on the north side of the property. Airport runways are seen to the north. Three hangar-type buildings are seen to the east. Small buildings are seen to the south. The property to the west is undeveloped.
1954	Topographic Map	The subject property and surrounding properties appear similar to the description for the 1953 aerial photograph.
1966	Topographic Map	The subject property is shown to be developed with two structures. The Ontario International Airport is shown to the north. Three large buildings and four smaller structures are shown on the property adjacent to the east. The property to the south appears undeveloped. A fire station is shown adjacent to the west.
1968	Aerial Photo	The existing maintenance building is shown on the subject property. Two other buildings are seen on the north end of the subject property with aircraft parked around them. The adjacent properties appear similar to the 1966 topographic map.
1973	Topographic Map	The subject property and adjacent properties appear similar to the 1966 topographic map.
1977	Aerial Photo	The subject property and adjacent properties appear similar to the 1968 aerial photograph.
1981	Topographic Map	The subject property and adjacent properties appear similar to the 1973 topographic map.
1989	Aerial Photo	The subject property appears to be improved with the existing buildings. Adjacent parcels appear to be improved as existing.
1994	Aerial Photo	The subject property and adjacent land appear substantially as noted in the 2004 site reconnaissance.
2002	Aerial Photo	The subject property and adjacent land appear substantially as noted in the 2004 site reconnaissance.

The subject property was agricultural in 1938. By 1949, the Ontario Airport had been constructed and the subject property was developed with several small structures. The use of these structures is not known. The existing maintenance building appears to have been constructed between 1966 and 1968. The other three buildings currently located on the subject property were constructed between 1981 and 1989.

The historical use of the subject property is assumed to have been similar to the current use. However, specific details regarding operations on the subject property were not available. It is likely that petroleum products and solvents were used on the subject property for aircraft service and maintenance. This past use of the subject property is considered to represent a recognized environmental condition.

5.5 HISTORICAL USE INFORMATION ON ADJOINING PROPERTIES

The historical sources referenced for adjoining properties were the same as those referenced for the subject property, with the exception that building permits for adjoining properties were not reviewed. The timeline in Section 5.4 above indicates the historical use of adjoining properties.

6.0 SITE RECONNAISSANCE

6.1 METHODOLOGY AND LIMITING CONDITIONS

Mr. David L. Simon, REA along with Mr. Alfred Mercado and Mr. Edwin Velasco conducted the site reconnaissance on March 2 and March 3, 2004. The scope of the site reconnaissance is detailed in Section 2.2.

6.2 GENERAL SITE SETTING

The subject property includes approximately 10.87 acres. The subject property is developed with four buildings. One of the buildings is occupied by an aircraft service equipment company, two of the buildings are used for aircraft storage, and one building is used for airport maintenance storage. The northwest corner of the property is paved and used for automobile parking. The remainder of the property is used for vehicle and equipment storage.

Access to the property is provided from South Vineyard Avenue to the west and from the airport to the north.

The immediate vicinity is dominated by the Ontario International Airport and associated facilities.

6.3 SITE RECONNAISSANCE OBSERVATIONS

HAZARDOUS MATERIALS STORAGE

ABOVEGROUND STORAGE TANKS: The only AST observed on the subject property was a 499 gallon propane AST located to the south of Building 2.

UNDERGROUND STORAGE TANKS: No indications of existing USTs were observed at the subject property.

OTHER REPORTABLE QUANTITIES: A parts washer was observed inside of Building 2. This parts washer uses an aqueous solvent. The parts washer is serviced by Safety Kleen. Hydraulic oil, slide lube, motor oil, waste oil, used oil filters, waste coolant, waste deicing solution, and antifreeze in 55-gallon drums and 5-gallon containers were observed on containment pallets at the east side of the hangar area of Building 2. One gallon containers of oil and antifreeze were observed stored in the maintenance room at the east side of Building 2. No staining or other indications of release were noted in these storage areas. The concrete in these areas was noted to be in good condition and no conduits to the subsurface were noted. The noted storage and parts washer does not represent a recognized environmental condition.

Approximately 60 new five-gallon buckets of paint were observed in the maintenance building on wooden pallets. Approximately 25 empty 55-gallon drums were also observed stored on wooden pallets in this building. No staining or other indications of release were noted in these storage areas. The noted storage does not represent a recognized environmental condition.

No chemical storage was noted in Building 3 or Building 5.

Materials stored along with vehicles and equipment on the southern portion of the subject property included lead-acid batteries and unlabeled containers (5-gallon buckets and 55-gallon drums). This portion of the property is used by ASIG and Evergreen for vehicle and equipment storage. These materials should be identified and disposed of properly.

ODORS: No pungent or noxious odors were detected on the subject property or its immediate vicinity during the inspection.

STAINING: Small areas (less than 2-foot by 3-foot) of apparent oil staining were noted in the paved and unpaved areas of the site. The noted oil staining appeared superficial and does not represent a recognized environmental condition.

WASTE GENERATION

AIR POLLUTION: No evidence was found to indicate that the subject property contributes to air pollution. No visible air emissions or sources of air emission were observed at the subject property. No smells of air emissions, chemical gases, petroleum products, or foul odors were detected on the subject property.

HAZARDOUS WASTE: Hazardous waste generated at the subject property includes the following waste streams:

- **Waste Oil:** Waste oil is stored in a 55-gallon drum on secondary containment in Building 2. The oil is taken off-site for disposal by Mark Alarcon Waste Oil Service.
- **Used Oil Filters:** Used oil filters are stored in a 55-gallon drum on secondary containment in Building 2. The oil filters are taken off-site for disposal by Mark Alarcon Waste Oil Service.
- **Waste Antifreeze:** Waste antifreeze is stored in a 55-gallon drum on secondary containment in Building 2. The waste antifreeze is taken off-site for disposal by Mark Alarcon Waste Oil Service.
- **Waste Deicing Solution:** Waste deicing solution is stored in a 55-gallon drum on secondary containment in Building 2. The waste deicing solution is taken off-site for disposal by Mark Alarcon Waste Oil Service.

No reports or indications of releases of hazardous waste were noted at the subject property. The generation of hazardous waste at the subject property is not considered to be a recognized environmental condition.

INFECTIOUS WASTE: The subject property does not currently generate infectious waste.

SOLID WASTE: Solid waste generated at the subject property is collected by the City of Ontario for disposal off-site.

OTHER SITE OBSERVATIONS

TRANSFORMERS: Pad-mounted transformers were observed in the northwest parking lot area and near the southeast corner of Building 5. These transformers are owned and operated by the Southern California Edison Company (SCE). These transformers do not represent a recognized environmental condition.

VEGETATION: No unusually stressed vegetation was noted.

PONDS: No ponds were observed on the subject property.

POTABLE WATER SYSTEMS: The City of Ontario provides potable water.

POWER DISTRIBUTION SYSTEMS: Southern California Edison provides electricity to the subject vicinity. The subject property is supplied with natural gas by the Southern California Gas Company.

SEWER SYSTEMS/CESSPOOLS/SEPTIC TANKS: The subject property is connected to the sanitary sewer. The subject property was connected to the sewer when the property was developed. No cesspools or septic tanks were identified on the site.

SINKHOLES: No sinkholes were observed on the subject property.

SUMPS: No sumps or clarifiers were noted on the subject property.

TRENCHES: No trenches were noted on the subject property.

WELLS: No current groundwater wells were noted on the subject property.

UNDERGROUND HYDRAULIC LIFTS: No underground hydraulic lifts are located at the subject property.

7.0 INTERVIEWS

7.1 INTERVIEW WITH OWNER

The subject property is owned by LAWA.

7.2 INTERVIEW WITH SITE MANAGER

The subject property is managed by LAWA.

7.3 INTERVIEW WITH OCCUPANTS

Building 2 was occupied by ASIG at the time of the site visit. Earth Tech interviewed Mr. William Mason, Operations Supervisor for ASIG regarding operations at Building 2. No other occupants were interviewed.

7.4 INTERVIEW WITH LOCAL GOVERNMENT OFFICIALS

Earth Tech interviewed building, zoning, and fire department personnel for the City of Ontario regarding the subject property. The information from this research is summarized in the appropriate sections above.

8.0 ADDITIONAL SERVICES

8.1 ASBESTOS SURVEY

Earth Tech, Inc was retained by the LAWA to perform an Asbestos Survey of the property located at 1049 South Vineyard Avenue in Ontario, California.

The survey was conducted on March 2, 2004 by the following State of California Certified Asbestos Consultants/Site Surveillance Technicians:

Mr. David Simon..... Certificate No. 92-0005
Mr. Alfred Mercado..... Certificate No. 00-2761

The purpose of the survey was to identify friable and non-friable asbestos-containing building materials and to document the location, material type, asbestos content, friability, and the estimated total quantity.

ACCESS

The survey of the buildings was conducted on March 2, 2004. All functional spaces were accessible and inspected.

SURVEY PROCEDURES

Suspect asbestos-containing material identification was performed by entering each functional space and assessing all structural, architectural, and mechanical components for the presence of suspect asbestos-containing materials. The following is the Environmental Protection Agency (EPA) sample list of suspect asbestos-containing building materials as published in Appendix G of the EPA "Green Book" dated July 1990.

Sample List of Suspect Asbestos-Containing Materials

Cement Pipes	Elevator Brake Shoes
Cement Wallboard	HVAC Duct Insulation
Cement Siding	Boiler Insulation
Asphalt Floor Tile	Breeching Insulation
Vinyl Floor Tile	Ductwork Flexible Fabric Connections
Vinyl Sheet Flooring	Cooling Towers
Flooring Backing	Pipe Insulation
Construction Mastics	Heating and Electrical Ducts
Acoustical Plaster	Electrical Panel Partitions
Decorative Plaster	Electrical Cloth
Textured Paints/Coatings	Electric Wiring Insulation
Ceiling Tiles and Lay-in Panels	Chalkboards
Spray-Applied Insulation	Roofing Shingles
Blown-in Insulation	Roofing Felt
Fireproofing Materials	Base Flashing
Taping Compounds (thermal)	Thermal Paper Product
Packing Materials (wall/floor penetrations)	Fire Doors
High Temperature Gaskets	Caulking and Putties
Laboratory Hoods/Table Tops	Adhesives
Laboratory Gloves	Wallboard
Fire Blankets	Joint Compounds
Fire Curtains	Vinyl Wall Coverings
Elevator Equipment Panels	Spackling Compounds

Note: This list does not include every product/material that may contain asbestos. It is intended as a general guide to show which types of materials may contain asbestos.

The survey conducted was not intrusive and did not include access and sampling of areas that required demolition.

Previous sampling data and original construction plans and specifications were not available at the time of the survey. All findings, conclusions, and analytical data presented in this report are based on the information (field inspection and sampling data) obtained by our inspection team during the survey.

For reporting purposes, space designations were assigned to each functional space within the facility. The functional space designations are used to identify the location of confirmed asbestos-containing materials and are referred to in the report and on the associated drawings.

BULK SAMPLING PROCEDURES

Each suspect asbestos-containing material (ACM) identified was bulk sampled in accordance with sampling guidelines established by the Environmental Protection Agency. The following summarizes the sampling procedures utilized.

1. The location and total quantity of each ACM was tabulated.

2. These materials were then categorized into homogeneous materials. A homogeneous material is defined as being uniform in texture, color, and date of application.
3. A sampling scheme was developed based upon the location and quantity of the various homogeneous materials.
4. Bulk samples were collected by trained personnel using an appropriate sampling tool and a leak-tight container.
5. Decontamination of bulk sampling tools to prevent the spread of secondary contamination to subsequent bulk samples.
6. Each bulk sample was individually numbered and recorded on a Bulk Sample Log.
7. A Chain of Custody Record was maintained to track possession of the samples.

BULK SAMPLING SCHEME: Representative bulk samples were collected in accordance with the following bulk sampling scheme.

1. Surfacing Material: (fireproofing, acoustical, blown-in, trowel-on, plaster, textured paint/coatings)
 - Less than 1,000 SF..... 3 samples
 - Between 1,000 SF and 5,000 SF 5 samples
 - Greater than 5,000 SF 7 samples
2. Pipe Insulation: (block, corrugated, compressed paper)
 - Less than 1,000 LF 3 samples
 - Greater than 1,000 LF 1 additional sample per 500 LF
 - Joints associated with fiberglass 3 samples
3. Boiler and Tank Insulation
 - Composite Core 3 samples
 - Patches 3 samples each
 - Fire Brick 3 samples
4. Miscellaneous Materials:
 - Transite 1 sample
 - Floor Tile 3 samples
 - Floor Tile Mastic 3 samples
 - Linoleum 3 samples
 - Linoleum Mastic 3 samples
 - Floor Backings 3 samples
 - Drywall/Compound/Tape..... 3 samples

Ceiling Tile	3 samples
Adhesive/Mastic	3 samples
Window Glazing	
a. Less than 25 panes	3 samples
b. Greater than 25 panes	3 samples
Vapor Barrier (felts)	3 samples
Asphalt Roofing Products	
a. Field Felts (composite)	3 samples
b. Base Flashing	3 samples
c. Mastic	3 samples
Others	3 samples

BULK SAMPLE ANALYSIS

All bulk samples were analyzed by Polarized Light Microscopy (PLM) in accordance with the "Interim Method for the Determination of Asbestos in Bulk Insulation Samples EPA/600/R-93/116" dated July 1993 and adopted by the National Voluntary Laboratory Accreditation Program (NVLAP) Title 15, part 7 of the Code of Federal Register (CFR) as affiliated with the National Institute for Standards and Technology (NIST) with the following exception in reporting procedures.

Exception: The EPA and South Coast Air Quality Management District do not consider those materials which contain one percent or less (< 1%) of asbestos to be an "asbestos-containing material" and those materials are recorded by the laboratory as "none detected". However, the State of California [California Labor Code, Section 6501.8(b)] defines an asbestos-containing building material as any manufactured construction material containing more than one tenth of one percent (> 0.1%) asbestos by weight. Thus, bulk sample analysis of suspect materials indicating less than one percent (< 1%) by weight are reported by the laboratory as "trace" and are identified in this report as an asbestos-containing materials.

Each sample was subject to two microscopy examinations. The first examination was performed at 20X magnification using a stereo microscope equipped with an external illuminator. Each sample was examined for layering, homogeneity, and the presence of fibrous and non-fibrous materials. An estimate of the percentage for each sample component, relative to the entire sample volume, was made. When discrete strata are identified as a separate material, fibers are first identified and quantified by layer and then the results are combined to yield an estimate of total percent asbestos present.

The second examination was performed at a range from 100X to 400X magnification using a Polarized Light Microscope equipped with two polarizing filters to observe specific optical characteristics. The use of polarized light allows the determination of refractive indices along specific crystallographic axes. Morphology and color were also observed. A

retardation plate was placed at a 45-degree angle between the cross polars to determine the sign of elongation using orthoscopic illumination. Orientation of the two filters such that their vibration planes were perpendicular allowed observation of the birefringence and extinction characteristics of anisotropic particles.

All samples were submitted to Forensic Analytical Laboratory for analysis. Forensic Analytical Laboratory is accredited by the American Industrial Hygiene Association (AIHA), National Voluntary Laboratory Accreditation Program (NVLAP), National Institute of Standards and Technology (NIST), and is a successful participant in the Proficiency Analytical Testing Program (PAT).

Laboratory analysis confirmed the presence of asbestos in the following suspect asbestos-containing materials. The following chart identifies the location, material type, percent asbestos, friability, and estimated quantity of material present.

LOCATION	MATERIAL TYPE	PERCENT ASBESTOS	FRIABLE	QUANTITY
Building 2 West Restrooms	Brown Patterned Linoleum/Mastic	65% Chrysotile in Backing	No	180 SF
Building 3 Northwest Office Area	12" Speckled Brown/White Floor Tile/Mastic	3% Chrysotile in Tile, None Detected in Mastic	No	300 SF

The following section provides a complete list of the suspect asbestos-containing building materials bulk sampled within the structures and the corresponding laboratory Certificate of Analysis. A copy of the Forensic Analytical laboratory report is included as an Appendix to this report.

SUSPECT/CONFIRMED ASBESTOS-CONTAINING BUILDING MATERIAL INVENTORY

The following suspect asbestos-containing building materials were identified in the referenced functional space. The inventory identifies the sample number, material type, location, asbestos content, friability, and estimated total quantity of material. All suspect asbestos-containing building materials identified were bulk sampled to determine if they contain asbestos, no materials were assumed to be asbestos-containing. All materials for which laboratory analysis confirmed the presence of asbestos in quantities greater than 1/10 of 1 percent (> 0.1%) have been highlighted.

SAMPLE NO.	MATERIAL TYPE	SAMPLE LOCATION	ASBESTOS CONTENT	FRIABLE	QUANTITY
1	2' x 4' Fissured Ceiling Tile	Building 2 Conference Room	None Detected	N/A	N/A
2	2' x 4' Fissured Ceiling Tile	Building 2 Office	None Detected		
3	2' x 4' Fissured Ceiling Tile	Building 2 Admin. Office	None Detected		
4	Brown Baseboard/Mastic	Building 2 Conference Room	None Detected	N/A	N/A

54	Acoustic Ceiling Material	Building 3 Hallway	None Detected		
55	2' x 4' Fissured Ceiling Tile	Building 3 Hallway	None Detected	N/A	N/A
56	2' x 4' Fissured Ceiling Tile	Building 3 Center Office Area	None Detected		
57	2' x 4' Fissured Ceiling Tile	Building 3 West Office Area	None Detected		

The following federal, state, and local regulations require that the identified asbestos-containing materials be removed from 1049 South Vineyard Avenue prior to demolition or renovation and that written notification be provided to contractors and other effected parties.

1. The Federal National Emissions Standards for Hazardous Air Pollutants (NESHAP) for building demolition and renovation applies to facilities that contain more than 160 linear feet or 100 square feet and requires that asbestos-containing building materials be removed prior to demolition or renovation.
2. The California Health and Safety Code Chapter 10.4 requires that any owner of a commercial or industrial building provide written notice to their employees, tenants and contractors about the presence of asbestos in the building within 15 days of receipt of such knowledge. Any contractor that receives such notice is required to provide a copy to each of its employees.
3. South Coast Air Quality Management District Rule 1403 requires written notification 10 working days prior to the demolition of any structure and that all

friable and non-friable asbestos-containing building materials be removed prior to demolition by a State of California licensed asbestos abatement contractor.

NOTE: Other asbestos related and non-asbestos related regulations apply to site demolitions.

8.2 LEAD BASED PAINT SURVEY

Earth Tech, Inc. was also retained by LAWA to perform an XRF Lead-Based Paint (LBP) Survey of the property located at 1049 South Vineyard Avenue in Ontario, California.

Mr. Alfred Mercado and Mr. Edwin Velasco conducted the survey on March 3, 2004.

The purpose of the survey was to identify LBP and lead-containing paint (LCP) and to document the location, paint type (color), substrate, total lead content, condition and estimated total damaged quantity for each lead based paint identified. Excluded from the survey was subsurface investigation of suspect LBPs.

A variation of the random sampling protocol described in the HUD guidance document (U.S. Department of Housing and Urban Development, June 1995) was utilized in developing the sampling procedures for this LBP survey. Random sampling of a facility that has similar characteristics such as construction materials, painting histories, and date of construction is considered an appropriate methodology. This process reduces the cost of testing and makes it possible to evaluate and make decisions of assumed representative components without exhaustive testing.

The measurement procedures developed for the buildings involved collecting measurements from select, representative exterior and interior building components. Measurements were collected to determine if a lead-containing surface coating (LCSC) was present.

A Niton XL X-Ray Fluorescence Spectrum Analyzer (XRF) was used to detect the presence of lead in suspect LBPs. Paint containing greater than or equal to 0.7 mg/cm² of lead was considered LBP. Lead-containing paint (LCP) is defined by Cal/OSHA as paint containing any detectable concentration of lead.

ACCESS

The survey was conducted on March 3, 2004. All functional spaces were accessible and inspected.

Suspect LBP identification was performed by entering each functional space and assessing accessible structural, architectural, and mechanical components for the presence of suspect LBPs.

The survey conducted was intrusive and did include access and sampling of areas that required demolition. The inspection team accessed those areas where reasonable suspicion suggested suspect LBP might be concealed.

Previous sampling data and original construction plans and specifications were not available at the time of the survey. All findings, conclusions, and analytical data presented

in this report are based on the information (field inspection and sampling data) obtained by our inspection team during the survey.

For reporting purposes, space designations were assigned to each functional space within the facility. The functional space designations are used to identify the location of confirmed LBP and are referred to in the report and on the associated drawings.

PROCEDURES

Surface Testing Using X-Ray Fluorescence (XRF) Spectrum Analyzer

The XRF detector used for this survey was the NITON XL 309 Spectrum Analyzer. All operators were trained by NITON Corporation on the proper operating techniques and have been issued certificates.

NITON XL 309 - Information

The Niton XL 309 uses a 10 millicurie Cadmium¹⁰⁹ source, which has a half-life of 15 months. The XL measures both the L X-ray and K X-ray lines of lead. The triple L X-rays are independent of the substrate; are shown on the screen separately; have no read-through; are fast, highly accurate, and precise at low levels; and can penetrate 0.5 millimeter (mm) of paint. The L X-rays are used to determine the levels of lead in the paint and the K X-rays are used to resolve ambiguities and provide measurements for painted surfaces with numerous layers of paint.

The XL is a multi-channel analyzer of XRF, controlled by a microprocessor, with a liquid crystal display (LCD) to show the resultant spectra and readings. It reads from 1,024 channels and displays 100 channels.

The LCD displays:

- Lead levels of both L and K X-ray readings
- The precision of the instrument (i.e., +/- 0.1)
- A depth for each sample (from 1 to 10)
- Time in source seconds (Ss) and watch (live) seconds
- Battery life and temperature.

The detection range of the L X-rays is from 0.1 to 5.0 mg/cm². The K X-ray detection range is from 0.1 to 100 mg/cm².

The LCD screen shows a continuous readout of each item indicated while the sample is being taken, allowing the operator the opportunity to continue the measurement until the desired accuracy and precision have been achieved. Therefore, sampling time can vary from 5 seconds to a few minutes.

The measuring window of the XL is 1 centimeter (cm) x 2 cm and is located on the bottom of the device near the front edge, thus allowing sampling of small surfaces (i.e., top side of a chair rail).

Calibration

The NITON XL automatically calibrates each time the device is turned on. The calibration is accomplished by sampling the tungsten shield and adjusting its sampling results to match the known response of the tungsten. This calibration was conducted every day.

XRF Measurement Collection

Following the identification of the select, representative building component to be measured, the location was identified and a "representative" measurement was collected.

Once a location was identified, all necessary data were entered into the NITON XL. These data included:

1. Room
2. Component type (structure and feature)
3. Component substrate
4. Component condition
5. Side.

Following the entry of the above information, a measurement was taken. After 3 seconds, the XL always showed a graphic display, an autoscaled spectra from 0 to 25 kilo-electron volts (keV). If lead was present, three independent peaks were shown from the alpha, beta, and gamma ranges of the L X-rays. The middle peak (beta) at 12.6 keV was a definite signal of the presence of lead. At any time after 3 seconds, the XL displayed a numerical reading in the standard mode if there was a 95 percent confidence level of the result.

INTERPRETATION OF XRF SAMPLING DATA

Lead-Based Paint (LBP)

For this project the XRF measurement data were interpreted as follows:

- Positive results (LBP present) were determined when L results revealed a lead concentration of 0.7 mg/cm² or greater.
- Negative results (LBP not present) were determined when L results revealed a lead concentration of less than 0.7 mg/cm².

The following rules were applied to the measured representative components of each building type:

Lead Present

If at least one measurement of the select exterior or interior building component was positive, then LCSC and/or LBP as previously defined, was considered present on the select building component and similar components.

No Lead Present

LCSC and/or LBP was determined not to be present when all of the measurements of the select, representative building component types were negative, as previously defined.

FINDINGS:

A total of 131 representative XRF readings were obtained from the structures. XRF results revealed the presence of lead in quantities greater than or equal to 0.7 mg/cm² in 8 of the samples.

The following LBP was identified in the buildings, but is undamaged:

1. Beige Paint – Ceramic Tile in Rooms 101 and 102 in Building 2 and Room 111 in Building 3
2. White Paint – Ceramic Tile in Room 113 in Building 2 and Room 112 in Building 3
3. Red Paint – Ceramic Tile in Room 113 in Building 2
4. Yellow Paint – Concrete Floor Outside Building 2
5. White Paint – Concrete Floor in Maintenance Building

Lead was detected in quantities below 0.7 mg/cm², but above the detection limit of 0.01 mg/cm² in 53 of the samples (LCP).

The following LCP was identified in the buildings, but is undamaged:

1. White Paint – Drywall Walls in Rooms 104, 105, 106, 108, 109, 111, and 114 in Building 2
2. Beige Paint – Metal Door and Jamb in Room 107 in Building 2
3. White Paint – Wood Door and Jamb in Room 111 in Building 2
4. Brown Paint – Metal Beam in the Warehouse Area in Building 2
5. White Paint – Metal Column in the Warehouse Area in Building 2
6. White Paint – Window Casing in the Warehouse Area in Building 2
7. White Paint – Metal Exterior Wall and Door on Building 2 and Door on Building 3
8. Brown Paint – Metal Exterior Beam on Building 2
9. Beige Paint – Metal Exterior Walls on Buildings 2, 3, and 5 and the Maintenance

- Building
10. White Paint – Metal Door in Room 101 in Building 3
 11. White Paint – Wood Wall in Room 105 in Building 3
 12. Blue Paint – Wood Wall in Room 105 in Building 3
 13. White Paint – Drywall Walls in Room 108 in Building 3
 14. Brown Paint – Ceramic Tile and Baseboard in Restrooms in Building 3
 15. Brown Paint – Wood Door Jamb in the Hangar in Building 3
 16. Red Paint – Metal Beams and Columns in the Hangar in Building 3
 17. Black Paint – Metal Exterior Wall on Building 3
 18. Red Paint – Brick Exterior Wall on Building 3
 19. Red Paint – Metal and Concrete Beams and Columns in Building 5
 20. White Paint – Metal Door and Jamb in Building 5
 21. White Paint – Concrete Floor in Building 5
 22. Red Paint – Metal Beams and Columns in the Maintenance Building
 23. Red Paint – Exterior Beam on the Maintenance Building

Lead was not detected in quantities above the detection limit of 0.01 mg/cm² in 70 of the samples.

Specific XRF results for each suspect LBP sampled are provided in Section 6 – XRF Results.

QUALITY ASSURANCE/QUALITY CONTROL PROCEDURES

As required by the XRF PCS, quality control (QC) was accomplished through three measurements of a known lead standard. These measurements were taken of a red colored sample with a known lead concentration (1.0 mg/cm² ± 0.1). During these measurements, the expected average lead concentration was approximately 1.0 mg/cm². These QC procedures were conducted at the beginning and ending of each day, and/or whenever the XRF was turned on after a period of non-use. The QC readings were recorded in the sampling data.

Lead-Based Paint Related Demolition

Current Federal, State, and local regulations do not require the removal of tightly adhered LCP prior to demolition. As previously indicated, no damaged LBP was identified in the buildings.

8.3 OTHER POTENTIAL HAZARDOUS MATERIALS

Earth Tech, Inc. also surveyed the buildings for other potential hazardous materials including PCB-containing fluorescent light ballasts.

Mr. Alfred Mercado and Mr. Edwin Velasco conducted the survey on March 3, 2004.

Various styles of fluorescent light fixtures were observed throughout the buildings. Representative light fixtures were inspected for labels indicating "no PCBs". One ballast located in the parts room in Building 2 was noted to be labeled "No-PCB". No other ballasts containing the "No-PCB" label were found.

Unlabeled light ballasts should be removed as PCB-containing waste prior to renovation or demolition activities that might impact these materials.

9.0 FINDINGS

At the request of LAWA, Earth Tech, Inc. (Earth Tech) has performed a Phase I Baseline Environmental Site Assessment in accordance with the Scope of Services detailed in Section 2.2 and in general conformance with the scope and limitations of ASTM Standard Practice E1527-00. Any exceptions to, or deletions from, the ASTM Practice are described in Section 2.4 of this report.

It is Earth Tech's professional opinion that this assessment has revealed the following historical and/or current "recognized environmental conditions" (as that term is defined in ASTM Standard Practice E1527-00) in connection with the Property:

- **HISTORICAL PROPERTY USE:** The subject property was developed in the 1940s as a part of the Ontario Airport. The configuration of the buildings on the subject property has changed several times over the years. The exact nature of operations on the subject property are not known, but are assumed to include aircraft repair and maintenance activities.
- **UNDERGROUND STORAGE TANKS:** An 8,000-gallon underground storage tank was removed from the subject property in August 1999. The UST was discovered during a renovation. Soil samples were collected from beneath each end of the UST. The soil samples were analyzed for total petroleum hydrocarbons, benzene, toluene, ethylbenzene, xylenes, and MTBE. No concentrations of these compounds were detected in the soil samples collected. The excavation was backfilled with clean native soil and import fill and compacted.
- **ASBESTOS-CONTAINING MATERIALS:** Non-friable ACMs exist on the subject property.
- **LEAD-BASED PAINT:** Lead-based paint was found in good condition. These materials do not represent a health risk in their current state.
- **GROUNDWATER CONTAMINATION ON ADJACENT PROPERTY:** Known releases at the GE facility located adjacent to the east of the subject property are suspected to have impacted groundwater.

10.0 OPINIONS

It is Earth Tech's professional opinion that further investigation will be required in order to evaluate the following "recognized environmental conditions":

- **HISTORICAL PROPERTY USE:** Spillage of petroleum hydrocarbons and solvents used during these activities may have impacted the subsurface.
- **ASBESTOS-CONTAINING MATERIALS:** These materials do not represent a health risk in their current state. However, these materials could cause a health risk, if damaged or disturbed.
- **LEAD-BASED PAINT:** These materials do not represent a health risk in their current state. However, these lead-based materials could cause a health risk, if damaged or disturbed.
- **GROUNDWATER CONTAMINATION ON ADJACENT PROPERTY:** It is possible that impacted groundwater from the adjacent property has migrated or could migrate beneath the subject property.

11.0 CONCLUSIONS AND RECOMMENDATIONS

In Earth Tech's professional opinion, the following further actions are recommended:

- 1) **Soil Vapor Sampling:** Soil vapor sampling is recommended along the west and north sides of the subject property in the areas where buildings were previously located to evaluate possible impacts to the subsurface.
- 2) **Asbestos-Containing Materials:** An operations and maintenance program is recommended to control disturbance of suspect ACM in the buildings.
- 3) **Lead-Based Paint:** An operations and maintenance program is recommended to control disturbance of lead-based paint in the building.
- 4) **Monitoring of Site Assessment and Remediation Activities:** The results of any site assessment or remediation activities conducted on the property adjacent to the east, should be reviewed in order to monitor the progress of the clean up.

KEY QUALIFICATIONS

PROFESSIONAL SUMMARY

Mr. Nicolay has more than 11 years of experience managing a variety of environmental projects for industry. He has managed projects ranging from retail service station outlets to site assessment and closure at bulk storage terminals and refineries. Mr. Nicolay has experience with all facets of environmental restoration and underground storage tank projects. He has successfully managed a multi-disciplinary staff and subcontractors to achieve the project objectives and to attain site closure.

PROFESSIONAL EXPERIENCE

Former Unocal Bulk Storage Facility, San Pedro, California. Project Manger responsible for the remedial investigation, feasibility study, and remediation of a 22-acre crude oil storage facility. Through site characterization, determined that soil and groundwater had been impacted with petroleum hydrocarbons. Through negotiations with the Los Angeles Regional Water Quality Control Board and Port of Los Angeles, expedited closure of the facility, saving Unocal lease and remediation costs and allowing redevelopment of the property.

Former Unocal Bulk Storage Facility, Brea, California. Directed assessment and feasibility study project at a former Unocal bulk storage facility in Brea. Property had been divested and was occupied by a chemical manufacturer. Performed a soil and groundwater assessment to define the extent of crude oil beneath the site. Removed crude in bulk from the subsurface using Unocal subcontractors. Was able to show that the plume was not

migrating and posed a minimal threat to degrade groundwater further.

Condensate Remediation From Active Oil Field Pipeline. Managed assessment and remediation of a petroleum condensate release from a crude oil pipeline near a wetlands environment. Defined the lateral extent of impacted groundwater, and developed and implemented a remedial action plan. Reduced hydrocarbon concentrations in groundwater by 90% over the 24-month remedial process. Closure levels based on best available technology. Conducted post-remediation monitoring and received closure.

Groundwater Sampling Refinery, Torrance, California. Developed a multiple aquifer groundwater sampling program that saved a major oil company more than \$70,000 a year. Reduced the number of wells to be sampled per quarter while maintaining the necessary control over the groundwater plume. Also, streamlined the quarterly groundwater report format to reduce the quarterly sampling and monitoring cost further.

Projects for Major Oil Company Clients. Served as principal client contact and project manager for two major petroleum company accounts. Managed remedial investigations at retail service stations, bulk storage terminals, metal plating, and refining operations. Managed tank removals and replacements at sites throughout Southern California. Managed engineers and hydrologists performing testing to determine the engineering design parameters for in situ and ex situ remedial alternatives. Successfully closed former station in Orange County, California, using risk assessment results in negotiations with regulators.

Site Investigation, City of Oregon City, Oregon. Managed the assessment of areas that may have released toxic chemicals during flooding in Central Oregon in 1996. Developed the sampling protocol and analytical requirements to evaluate the sediments and surface water for contamination. Completed the field investigation and report with recommendations prior to the beginning of the summer tourist season. Allowed the client time to remove contamination material and reopen public facilities in a timely fashion.

Site Closure, CPC Bakery, Various Sites. Managed closure at multiple sites for a nationwide baking business. At a former vehicle maintenance facility in Fullerton, negotiated site closure for a release of hydraulic oil into the subsurface. At bakery sites in Placentia and Montebello, successfully closed the sites following tank removal and abandonment.

Closure Plan, The Gas Company, Mission Viejo, CA. Developed a closure plan for a former gas company vehicle maintenance facility in Mission Viejo, CA. Using existing data and risk based guidelines published by the San Diego Regional Water Quality Control board, saved the gas company thousands of dollars in additional remedial action costs and allowed the property to be sold and reused as an auto dealership.

Project Manager, Site Investigations and Closures, World Oil, Various Sites. Managing multiple sites: coordinated field activities at a bulk storage terminal and retail gasoline service station outlets; developed closure documents for two sites in Los Angeles; and assessed the subsurface conditions at a former gasoline service station that has since been redeveloped into a small shopping center.

Phase II Site Assessments, Various Sites in San Diego County, CA. Project Manager for Phase II site assessments at over 35 Thrifty gas station sites in San Diego County. The work included drilling shallow borings to determine any contamination or leaking tanks in support of site acquisition screening.

USPS SVE Operation, El Cajon, California. Will be operating Soil Vapor Extraction system until site is remediated and closure is reached.

DAVID L. SIMON, R.E.A.

Project Engineer

KEY QUALIFICATIONS

- Project Manager for more than 400 Phase I ESA investigation in the past eight years
- Thoroughly familiar with the requirements of ASTM Standard Practice for Environmental Site Assessments (E1527-97/2000).
- Project/Site Manager for Asbestos and Lead-based Paint Surveys and Phase II Assessments for various facilities.

BACKGROUND

David Simon has more than 14 years of environmental experience on various projects including Phase I, Phase II, Remedial Investigation/Feasibility Studies, and asbestos and lead-based paint identification and abatement activities. Representative project experience includes:

PHASE I

- Served as Project Manager for over 400 Phase I site assessments on properties located throughout the western United States, primarily in California. Responsibilities included determining scope of work, coordinating project tasks, conducting site reconnaissance, identifying hazardous materials and petroleum products concerns (PCBs, Asbestos-containing Materials, Lead-containing Paint, USTs, ASTs, etc.), conducting historic site and vicinity review (including review of historic aerial photographs, historic maps, and building permits), reviewing agency database information in order to assess potential contamination at the subject property and potential impact to the subject property by surrounding sites, contacting appropriate government agencies, and summarizing the information obtained during the Phase I investigation into a final report for submission to the client.

PHASE II

- Project manager for over 20 Phase II investigations as follow-up to potential contamination discovered during Phase I investigations. In these situations, the existence of former USTs with no formal closure was identified. Responsibilities included preparation of scope of work, workplan, oversight of field operations, data review and interpretation, and report preparation.

Types of facilities include the following:

- Gasoline Stations
- Manufacturing Facilities
- Commercial Buildings
- Historical Facilities with USTs, Clarifiers
- Dry Cleaners
- Agricultural Facilities

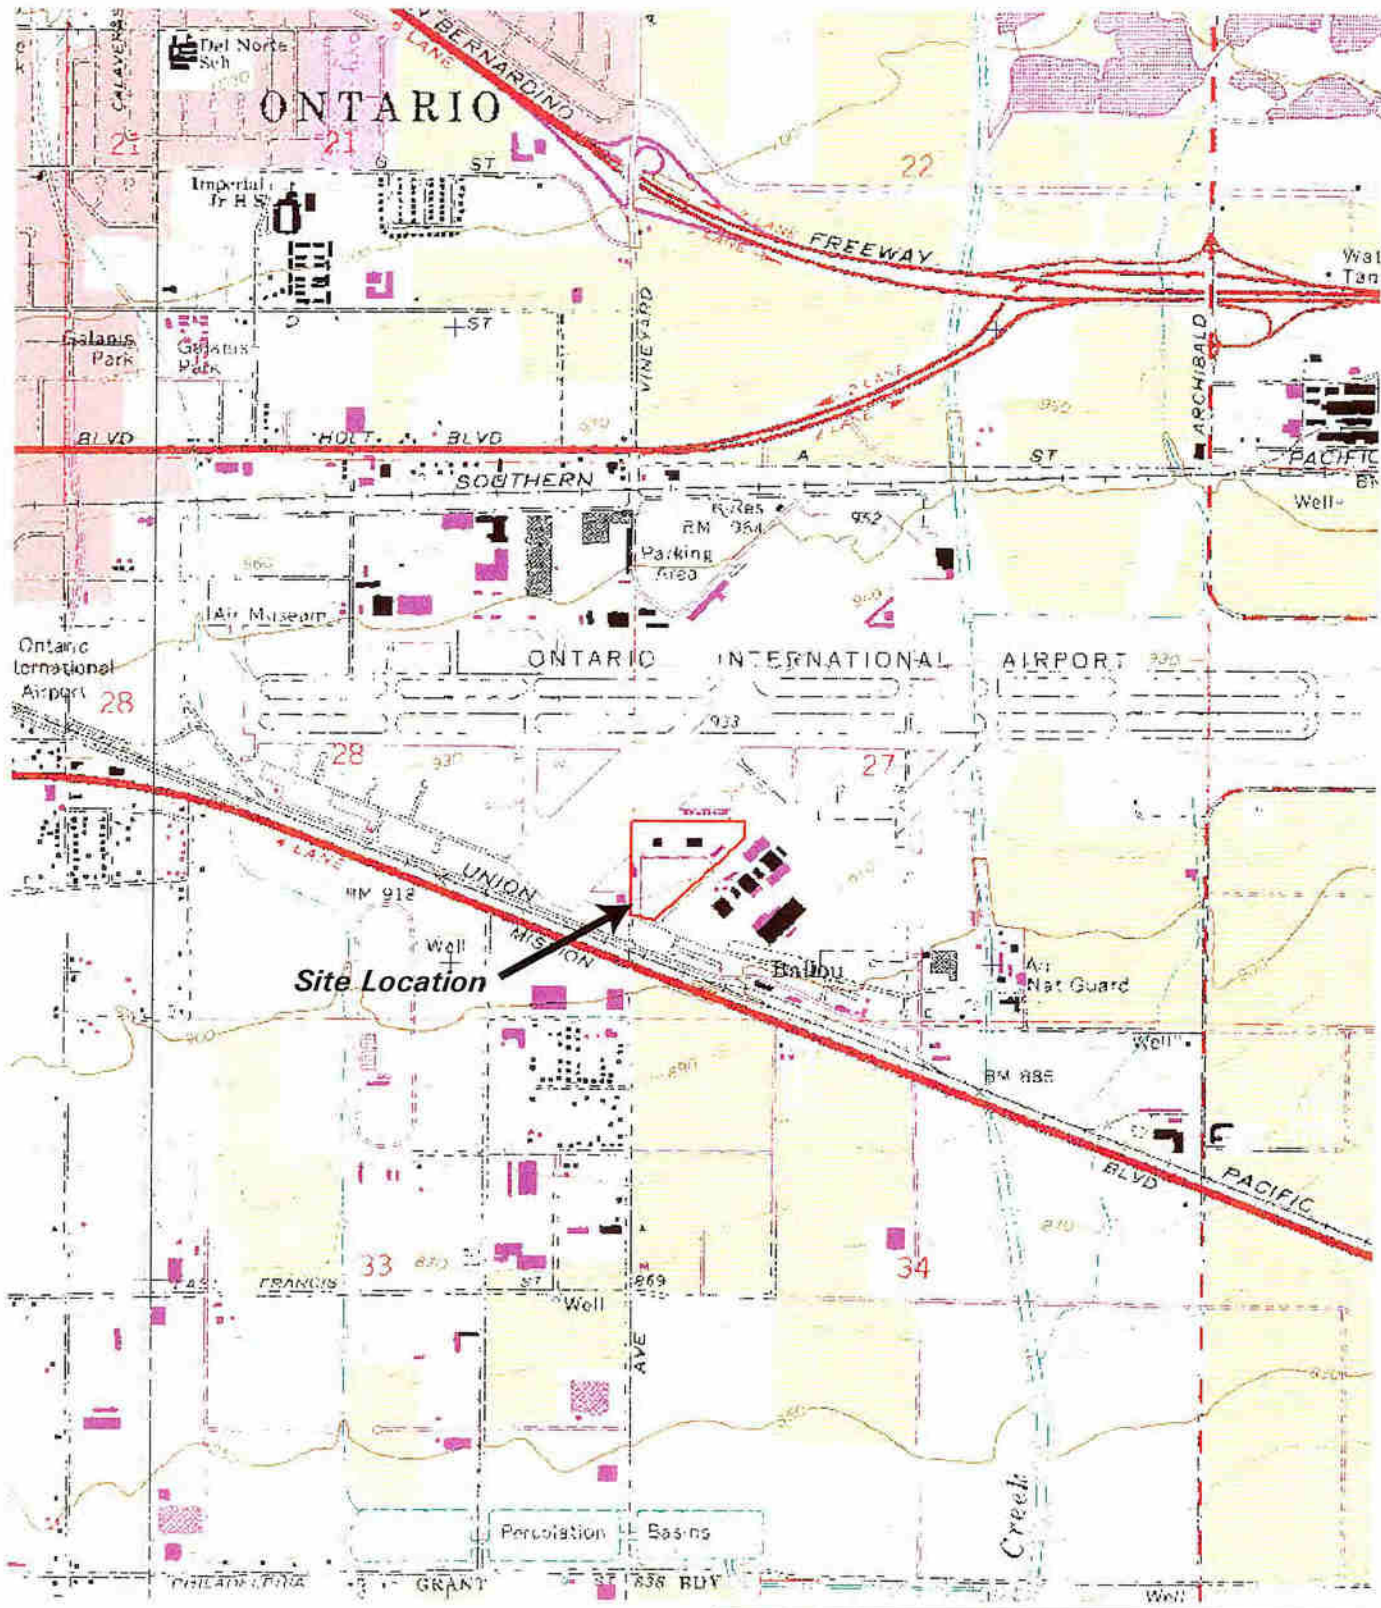

ASBESTOS AND LEAD PAINT

- Project Manager/Field Supervisor for surveys to identify the locations of asbestos-containing materials and lead-based paint. Responsibilities during abatement projects included oversight of contractor work practices, monitoring, notifications, and report preparation.

Types of facilities investigated and/or abated include:

- High-rise Office Buildings
- Educational Facilities
- Apartment Buildings
- Commercial Properties
- Industrial/Warehouse Properties
- Historical Structures

EXECUTIVE SUMMARY

At the request of Los Angeles World Airports (LAWA), Earth Tech, Inc. (Earth Tech) performed a Limited Phase II Environmental Site Assessment (ESA) at the East Avion Complex located at 1049 South Vineyard Avenue in Ontario, California. The scope of work performed for the Limited Phase II Environmental Site Assessment included a 24-point soil gas survey.

Based on the results of the Limited Phase II ESA investigation at the site, the following is concluded:

GENERAL SITE CONDITIONS

- Groundwater was not encountered to the maximum depth investigated (5 feet).
- No significant volatile organic compounds (VOCs) were identified in the former aircraft maintenance areas.

RECOMMENDATIONS

No further investigation or action is recommended at the subject property.

1.0 INTRODUCTION

In December 2004, Los Angeles World Airports (LAWA) retained Earth Tech to provide environmental services pertaining to the East Avion Complex at 1049 South Vineyard Avenue in Ontario, California (see Figure 1 for Site Location Map).

1.1 Site Description

The subject property is approximately 10.87 acres and is developed with four buildings. One of the buildings is occupied with an aircraft service equipment company, two of the buildings are currently vacant, and one building is used for airport maintenance storage. The northwest corner of the property is paved and used for automobile parking. The remainder of the property is used for vehicle and equipment storage.

Access to the property is provided from South Vineyard Avenue to the west and from the airport to the north.

The immediate vicinity is dominated by the Ontario International Airport and associated facilities.

1.2 Background

Earth Tech conducted a Phase I Baseline Environmental Site Assessment (ESA) of the subject property in April 2004 at the request of LAWA. The Phase I ESA identified historical use of the subject property for aircraft maintenance and repair operations as a recognized environmental condition. The subject property was developed in the 1940s as a part of the Ontario Airport. The configuration of the buildings on the subject property has changed several times over the years. The exact nature of operations on the subject property are not known, but are assumed to include aircraft repair and maintenance activities.

This limited Phase II investigation was conducted to evaluate the possibility of subsurface impacts resulting from the past maintenance activities conducted on the subject property between the 1940s and the present time.

1.3 Purpose and Scope of Services

Earth Tech conducted the following scope of work to evaluate identified areas of concern.

A 24-point soil gas survey was conducted in and around the current and former onsite buildings where airport maintenance activities were formerly conducted. Soil gas sampling was conducted at a depth of five feet below ground surface (bgs) from each sample location. Samples were analyzed by an on-site mobile laboratory for Volatile Organic Compounds (VOCs).

2.0 SOIL VAPOR SURVEY

Prior to drilling, Earth Tech personnel met with LAWA personnel and performed a site reconnaissance to mark with white paint the proposed sampling locations.

A geophysical contractor, Spectrum Geophysics, used magnetic and electromagnetic methods, as well as ground penetrating radar; to mark nearby utility lines and to assure that sampling activities did not impact subsurface utilities. Underground Service Alert (Dig Alert) was notified two days prior to field work, per state law, for the member companies to mark utilities that may have conflicted with the proposed boring locations. No permits were needed to implement the proposed scope of work.

Fieldwork procedures, analyses and sample collection were performed in general accordance with the Los Angeles Regional Water Quality Control Board (LARWQCB) "Interim Guidance for Active Soil Gas Investigation", February 25, 1997 and the LARWQCB and California Department of Toxic Substance Control (DTSC) "Advisory - Active Soil Gas Investigations", January 28, 2003. The target soil gas sampling depth was five feet bgs.

2.1 Sampling Methods

Soil gas samples were collected using a hardened alloy steel hollow drive rod. The drive rods were advanced into the subsurface using a hydraulic ram on the back of a truck. Once the target depth had been reached, a stainless steel adapter was connected to a piece of ¼-inch clean, virgin polyethylene tubing, lowered down the bore of the drive probe, and mated to the point holder adapter. An O-ring between connections enables the system to deliver a vacuum-tight seal to assure that the sample is collected at the bottom.

The volume of gas purged prior to sample collection was measured. At the first sampling location of the project (SG-4), one (SG-4-5 (1V)), three (SG-4-5 (3V)) and five (SG-4-5 (5V)) times the sampler volume of the system was purged prior to collection of the sample. The purge volume with the highest response (in this case three purge volumes) was then used for the remainder of the soil gas samples. Once the required volume of air was removed from each soil gas point, a soil gas sample was collected with a 10cc syringe and submitted to the onsite laboratory for immediate analysis.

2.2 Analytical Sample Processing

Each soil gas sample was submitted to Centrum Analytical Laboratories, Inc., a state-certified laboratory operating a mobile laboratory on-site. Samples were prepared for the analyses of Volatile Organic Compounds (VOCs).

2.3 Laboratory Analysis

Soil gas samples were analyzed onsite for Volatile Organic Compounds (VOCs) by EPA Method 8260B.

During testing a cloth wetted with isopropanol was placed around the probe at ground level to test for leakage from the surface. No leakage was detected.

2.4 Quality Assurance/Quality Control (QA/QC)

Each laboratory report includes a quality assurance and quality control (QA/QC) report. The laboratory and QA/QC report includes the analytical results for the laboratory method blank for each test analyte, matrix spike recovery data, matrix spike duplicate recovery data and upper and lower control limits for

laboratory control samples. Test analytes and surrogate compounds are noted in with respect to the acceptable upper and lower control limits in the laboratory control samples.

2.5 Soil Gas Sample Locations

Nine soil gas sampling points (SG-1 through SG-6, SG-8, and SG-23 through SG-24) were advanced at the site on December 27, 2004. Due to weather conditions, additional sampling was delayed. The remaining fifteen soil gas sampling points (SG-7, and SG-9 through SG-22) were advanced at the site on January 20, 2006.

The locations of the sampling points are discussed in Table 2-1 and illustrated on Figure 2. GPS coordinates for the sample points are included in Table 1 on Figure 2.

TABLE 2-1
Soil Gas Sample Point Locations

Borehole	Location & Rationale	Soil Gas Sample Depth	Date Sampled
SG-1	Northwest corner of building formerly located north of Building 2	5'	December 27, 2004

SG-24	West end of former clarifier	5'	December 27, 2004

4.0 FINDINGS

4.1 Site Stratigraphy

Due to the direct push method used for collecting soil vapor samples, no soil cuttings were generated and soil stratigraphy was not evaluated. Groundwater was not encountered to the maximum depth investigated (5 feet).

4.2 Analytical Soil Vapor Results

No detectable concentrations of VOCs were detected in any of the soil vapor samples collected.

All laboratory data sheets are in Appendix A.

5.0 CONCLUSIONS

Based on the results of the Limited Phase II ESA investigation at the site, the following is concluded:

GENERAL SITE CONDITIONS

- Groundwater was not encountered to the maximum depth investigated (5 feet).
- No significant residual volatile organic compounds were identified in the former aircraft maintenance areas.

RECOMMENDATIONS

No further investigation or action is recommended at the subject property.

6.0 LIMITATIONS

Representatives, Warranties and Covenants

Earth Tech makes no warranty, either expressed or implied, as to its findings, opinions, recommendations, specifications, or professional advice except that these were promulgated after being prepared in accordance with generally accepted standards of care and diligence normally practiced by recognized consulting firms performing services of a similar nature.

The information contained in this report has received appropriate technical review and approval. The conclusions presented represent professional judgements and are based upon the findings from the investigation identified in this report and interpretation of such data based on our experience and background. This acknowledgement is made in lieu of all warranties, either expressed or implied.

Scope of Investigation

The scope of this investigation is limited to the scope of work as specified in Section 1.3.

Limitations on Reuse

All project documents prepared or furnished to Client may be based on information outside Consultant's control. Consultant does not warrant, expressed or implied, the accuracy thereof. All documentation furnished to the Client is intended for the benefit of the Client and is not intended or represented to be suited for reuse by the Client or others. Any reuse without the specific written consent of the Consultant for the specific purpose intended will be at user's sole risk and without liability and legal exposure to Consultant. Client agrees to indemnify and hold Consultant harmless from any and all liabilities, losses, costs, or expenses suffered by Consultant in connection with Client's unauthorized reuse of project documents.

MOBILE LABORATORIES AND DIRECT PUSH DRILLING

Monday, January 31, 2005

Mr. Dave Simon
Earth Tech, Inc.
300 Oceangate, Suite 700
Long Beach, CA 90802-4443

Re: InterPhase Project No. 05013
Location: Ontario Airport
1049 S. Vineyard Avenue
Ontario, CA

Dear Mr. Simon:

Please find enclosed is the analysis result for the project site as referenced above as submitted by Centrum Analytical Mobile Laboratories, Inc.

If you have any questions or need further assistance, please do not hesitate to call our office.

Sincerely,
InterPhase Environmental, Inc.

Paola Calderon
Project Coordinator

To: 'GEES --- Fricke, George (Corporate)'
Cc: ROLLINS, ROBIN; RAPHAEL, GEORGE F.; 'GEES -- Cynthia Johnson, Finance'; 'GEES -- Bradley Grubbs'; RAE, JAMES
Subject: ONT GEES CLOSURE

George:

In response to your request for a copy of a LAWA Phase I environmental site report on the GEES closure site, our Environmental Management Division (EMD) Representative, George Raphael, reports that LAWA did not perform a Phase I; rather, EMD responded to the GEES Phase 1 dated January 31, 2006 by MACTEC (Project No. 4951-5-2921.01). GEES provided EMD with all information requested in said response. Except for the Waste Water Treatment Plant close-out with the County and the possible demo. of Bldg. 8, there are no other outstanding environmental issues left to be addressed.

It is recommended that Bradley request the 3-day site closure from the County of San Bernardino immediately upon his return from vacation and that Bradley schedule a meeting with the County, George Raphael of EMD, and Bradley to discuss any issues. It is anticipated that the County may require sampling and removal of drain lines with regard to the Waste Water Treatment Plant.

Please call me at your convenience tomorrow to discuss further. Thanks.

Los Angeles World Airports

Date: May 4, 2006

To: Robin Rollins, Senior Management Analyst, ONT Airport Division - Property

From: Gary Brown, Environmental Division Manager

Subject: **ONT – MACTEC Phase I Environmental Site Assessment (ESA) - General Electric Engine Services, Inc. (GE), 1923 East Avion Drive**

The following is a summary of findings and recommendations based on the Environmental Management Division's (EMD) staff review of the subject report prepared for GE by MACTEC and dated January 31, 2006 (Project # 4951-05-2921.01). The report was prepared in conjunction with the termination of the leasehold at the subject site (Site).

MACTEC Phase I ESA Report Findings

1. History – GE moved to the site in 1955 replacing Northrop and Douglas Aircraft. Hangar 5 and the Administrative Building are not visible in aerial photographs until 1989. Figure 2 of the Report shows a layout of the site that includes Hangars 1, 2, 3, and 5, and associated annexes and structures. The report also includes a topographic site map prepared by Adkan Engineers and dated December 2005.
2. Underground storage tanks (USTs) – Environmental databases show that 14-17 USTs may have existed on the site. A 2002 ESA prepared for GE by Harding ESE, Inc. indicate that 15 USTs existed on site, and that those USTs have been properly removed or abandoned in place with closure certification from the Department of Toxic Substances Control (DTSC) in 1994. At least one UST may have been abandoned in place under the cleaning line. MACTEC indicate so far (Executive Summary, p. vi) that the closure letter for 15 UST was not located.
3. Electrical transformers – Pad and pole mounted transformers exist on the site. Pad mounted transformers are all "dry" type. No leaks were observed in and around the pole-mounted transformers that contain oils. All transformers are owned by Southern California Edison (SCE) who maintains that non of its transformers currently contain PCBs or polychlorinated biphenyls.
4. Environmental database listings – The site and many nearby properties are listed on several environmental databases that indicate historical association with environmental issues. The Report states that these listed properties are not anticipated to be recognized environmental conditions relative to the GE Site.
5. Regulatory agencies record review – MACTEC further reviewed relevant Site files at the Regional Water Quality Control Board (RWQCB) – Santa Ana Region, and the Department of Toxic Substance Control (DTSC) – Cypress office, and found the following (From Section 8.0 of the Report):

- a. A Notice of Deficiency from DTSC to GE regarding the 1990 UST Closure Plan submitted by GE.
 - b. Closure report for 5 USTs and associated piping/Vadose wells by OHM Remediation, dated May 30, 1991. Four tanks were removed and the area back-filled, while one, buried under a building support beam, was rinsed and closed in place with the approval of the SB Haz Mat.
 - c. Approval letter from DTSC, dated August 6, 1992, for the T-58 Sump Closure Work Plan.
 - d. Letter (dated 1991) from the RWQCB to former site occupants stating that chlorinated solvents have been detected down-gradient from ONT.
 - e. A Closure Certification Report, dated June 2, 1994, prepared by Canonie Environmental, documents the final recommendations and certification of removed UST's, closure of an Expanded Drum Storage Area (EDSA), closure of a 200-gallon waste storage tank, and an oil/water separator. On October 17, 1994, closure was granted and certified by the DTSC (which contradicts MACTEC's statement reported in 2 above).
6. Potential soil contamination – Cracks in the flooring were observed in Hangars 2, 3, and 5 that could have allowed contaminants to seep through to the soil beneath those hangars. Historically during the 1950's and 1960's under former site occupants Northrop and Douglas Aircraft, aircrafts were washed on site with runoff collected into unlined ditches and sumps. The findings below are listed in the order reported in the Report's Executive Summary.
- a. Hangar - Hangar 3 – Currently used for supplies storage and was a former machine shop where oils and solvents were used. The 2002 Harding ESA reported Tri/perchloro-ethylene (TCE/PCE) contamination based on soil-gas data collected southeast and southwest of the hangar. Historically, aircrafts were washed west of Hangar 3.
 - b. Hangar 5 – Currently used for aircraft engine refurbishing. Soil staining was observed on the floor of Hangar 5, which formerly housed a bearing cleaning room and a paint booth. The hangar now houses the Campbell grinder which uses many lubricants and solvents.
 - c. Hangar 2 – Currently used for supplies storage and formerly housed Plasma spraying.
 - d. Hangar 1 – A parts-cleaning area that uses many chemicals and solvents stored in tanks, some of which may have discharged into the southeast side pavement in the past.
 - e. T-58 test cell sump – The sump collects wastewater transported by truck from the GE Test Cell Facility. A closure plan was approved by DTSC in 1992 (mentioned in 4c above) that included drilling to collect and analyze soil borings. No further documentation is available. The report, however, on page 9, indicates a sump located 25 feet east of Tool Control at the northern end of Hangar 1 with its line running below the tool room (based on a 1990 Plumbing Diagram by Gabel) which was not part of the ESA study area. It is unclear if this is the T-58 test cell sump.

- f. Industrial waste discharge – In the 1950's, the former site occupants (Northrop and Douglas Aircraft), were cited by the Regional Water Quality Control Board (RWQCB) for probable sources of contaminants in the ground water, as a result of the routine discharge of industrial waste and wastewater into the ground (unlined ditches and sumps).
7. Asbestos – An Asbestos Assessment completed March 9, 2004 by Integrity Environmental Consultants, Inc. showed that asbestos tiles exist in the Data Processing Building.
8. Septic Tank / Leach Fields closure – Page 8 of the report indicates that reports on the location or closure of septic tanks or leach field could not be located. Connection, to the City of Ontario sewer system may not have taken place until 1985.
9. Wastewater treatment plant (WTP) and associated tanks – The Report (p.17) mentions that the WTP is permitted through the 'permit by rule' (PBR) system. The industrial wastewater permit is issued by the Inland Empire Utilities Agency and County Sanitation Districts of Los Angeles County.

MACTEC / EMD Recommendations and Action Items

1. History – No recommendations and actions.
2. USTs – The ESA stated that the assessment and findings should be researched further to confirm the historical and current presence of USTs at the site. EMD agrees that GE should provide to ONT Property and EMD historical plans and/or closure reports and letters related to USTs. Copies of the closure letters/reports may be obtained from the San Bernardino County Fire Department Hazardous Materials Division (SB Haz Mat). When such data cannot be located, a geo-survey of the site may be performed to confirm the presence and location of any USTs abandoned in place (one abandoned UST is confirmed). GE should also provide copies of the following reports as listed in Section 11.0 of the MACTEC ESA report:
 - a. Harding ESE, Inc., GE Site Phase I ESA, November 4, 2002.
 - b. Canonie Environmental, GE Hazardous Waste Management Units Closure Certification Report, June 1994.
 - c. Dames and Moore, Final Closure Report for USTs, August 8, 1988.
 - d. OHM Remediation Services Group, Closure Report for USTs, May 30, 1991.
3. Electrical Transformers – Though the MACTEC ESA did not suggest further action, EMD recommends that GE provide to ONT Property a statement or equivalent from SCE as to the PCB content of the pole mounted "wet" transformers. In most instances, labels indicating PCB contents (or No-PCB) are affixed to those transformers.
4. Environmental Database Listing - No recommendations or actions.
5. Regulatory agencies record review – GE shall provide to ONT property and EMD further clarification regarding USTs and other hazardous waste unit closures. A list (with relevant copies) of existing reports and records that identifies the units, what they processed, and when they were closed would be sufficient. The data should address the T-58 sump and any other sumps on the Site. This task may be combined with that recommended in 2 above.

6. Potential soil contamination – MACTEC recommends that a Work Plan be prepared to assess potential and recognized environmental concern. The Work Plan should include soil gas surveys and soil sampling, following all applicable state and local regulatory requirements. EMD agrees that GE should prepare or contract to prepare such a work plan and provide to EMD and the oversight regulatory agencies, including; RWQCB, SB Haz Mat (The Certified Unified Program Agency or CUPA), and most likely the City of Ontario. The work / investigation plan should be workable following site vacation, removal and/or decommissioning of all process units, and closure of the WTP.
7. Asbestos – The report did not provide further recommendations regarding to Asbestos. EMD, however, recommends that comprehensive asbestos, mold, and lead surveys be performed following GE's vacation of the site.
8. Septic Tank / Leach Field Closure – GE shall provide to ONT Property and EMD document relevant to the closure, copies of the current City of Ontario sewer permit and underground sewer pipe maps.
9. WTP and associated tanks – The "permit by rule" is formulated by the California Department of Toxic Substances Control (DTSC) and administered by the local CUPA. EMD is not currently aware that such permits are being administered by the Inland Empire Utilities Agency (who typically collects and supplies recycled water) or the Los Angeles County Sanitation Districts considering that the WTP Site is located in San Bernardino County. GE shall clarify this issue further by providing the EMD and ONT Property the following:
 - a. Copy of the WTP PBR permit – typically permit fees are billed annually.
 - b. Copy of the Closure Financial Assurance statement or equivalent.
 - c. Copy of the WTP Closure Plan and / or CUPA notification of the intended closure. In addition to the Closure Plan, GE shall inform ONT Property and EMD as to its intent regarding to the WTP assets; particularly equipment and fixtures to be left in place or removed from the site. This would determine possible future environmental, logistics and other concerns. EMD is recommending all equipment removed by GE following closure.
 - d. Any other relevant document(s), report(s), or plan(s).

EMD Additional Recommendations and Action Items

In light of the MACTEC Phase I ESA report findings and Site knowledge, EMD recommends the following additional actions:

1. GE to provide EMD with the Site's 2006 Hazardous Materials Business / Contingency Plan – The plan lists all the hazardous chemicals used and stored on site.
2. GE to remove and vacate all process equipment – (except those related to the fire suppression system), including and not limited to tanks, hoist, rails, compressors, generators, pumps, boilers, heater, ovens, cooling towers, and associated piping and peripherals.
3. GE to remove and vacate all hazardous chemicals and materials from the site including universal wastes such as computer and electrical equipment that are not part of the buildings.

Robin Rollins –
ONT Property
May 4, 2006
Page 5 of 5

4. GE to provide ONT Property and EMD with the active remaining Air Quality Management District permits (Including Title 5) after the site is vacated. If all currently permitted equipment by AQMD is to be removed by GE, then please ignore this action item.
5. GE, as with other former tenants, may be involved in litigation and / or cleanup and abatement orders issued by the RWQCB regarding TCE contamination of the Chino North Groundwater Management Zone (CNGMG). Such contamination is thought to have originated from the subject Site (and the GE Test Cell Site). Dr. Andrew Huang will coordinate the Los Angeles World Airports' (LAWA) involvement on this pending cleanup order. GE should provide ONT Property and EMD with a point of contact to obtain regular updates regarding this regulatory action.

Please feel free to contact Dr. Andrew Huang of my staff at (310) 646-2853, extension 1007 or George Raphael at (909) 975-5969, should you have questions or require further information or clarification.

RESOLUTION NO. 17188

CONFORMED COPY
 6092

WHEREAS, on recommendation of Management, there was presented for approval, a Non-Exclusive Right-of-Way License Agreement for General Electric Company at Ontario International Airport; and

WHEREAS, the right-of-way will be located both on General Electric's leasehold and along Avion Drive and Vineyard Avenue. The total area of the non-exclusive right-of-way is 0.2695 acre. General Electric will use the right-of-way for the installation and maintenance of an 8 inch sewer line which will feed into the Chino Basin Municipal Water District's non-reclaimable waste water system in Ontario; and

WHEREAS, the non-exclusive right-of-way will commence on July 11, 1990. No rent will be assessed for the right-of-way area; and

WHEREAS, licensee will be solely responsible for fully complying with any and all applicable present and/or future rules, regulations, restrictions, ordinances, statutes, laws and/or orders of any Federal, State, and/or Local Government entity and/or court regarding the storage, handling, processing, and/or transmission of all hazardous substances on the leasehold. The term "hazardous substances" will specifically include, but is not limited to gasoline, diesel fuel, jet fuel, lubricating oil, solvents, all asbestos material, if any located on the leasehold. Lessee will be solely responsible for any damages caused by and/or penalties levied as the result of its non-compliance; and

WHEREAS, licensee shall be responsible for all expenses associated with the right-of-way, including all possessory interest taxes, other taxes, maintenance, and insurance. Licensee shall procure at its expense and keep in effect at all times during the term of the License, insurance of the types and amounts prescribed by City. Licensee shall submit proof of said insurance that is acceptable to City; and

WHEREAS, licensee shall fully comply with Article 1, Chapter 2, Section 21.00 of the Los Angeles Municipal Code (Business Tax); and

WHEREAS, this Right-of-Way License is exempt from the provisions of the Rules and Regulations Regarding South Africa Related Contracts pursuant to Guideline #1 (c)(2) of the Guidelines for Implementation of the Department of Airports Rules and Regulations Regarding South Africa Related Contracts; and

-ONTARIO ADA.

11 JAN 91 3:12

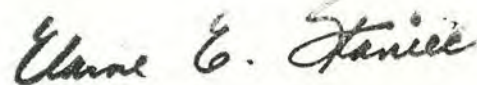

WHEREAS, General Electric Company has an approved Affirmative Action Plan on file; and

WHEREAS, this Right-of-Way License is exempt from the requirements of the California Environmental Quality Act as provided by Article VII, Class 1 (18)(c) of the Los Angeles City CEQA Guidelines;

NOW, THEREFORE, BE IT RESOLVED that the Board of Airport Commissioners determined that this Non-Exclusive Right-of-Way License is exempt from CEQA requirements and South Africa Contract requirements as stated above, approved the Non-Exclusive Right-of-Way License, and authorized the Executive Director to execute the Non-Exclusive Right-of-Way License upon approval as to form by the City Attorney.

oOo

I hereby certify that the foregoing is a true and correct copy of Resolution No. 17188 adopted by the Board of Airport Commissioners at a regular meeting held Wednesday, July 11, 1990.

Elaine E. Staniec - Secretary
BOARD OF AIRPORT COMMISSIONERS

CITY OF LOS ANGELES
DEPARTMENT OF AIRPORTS

NON-EXCLUSIVE RIGHT-OF-WAY LICENSE AGREEMENT

The CITY OF LOS ANGELES, a municipal corporation, acting by order of and through its Board of Airport Commissioners (hereinafter referred to as "City"), hereby permits GENERAL ELECTRIC COMPANY, as Permittee, to use the following described premises, for the term and for the uses hereinafter set forth, all subject to the Standard Terms and Provisions, as modified, attached hereto and made a part hereof.

Designated Premises: 0.2695 acre of non-exclusive right-of-way area located both on Permittee's leasehold and along Avion Drive and Vineyard Avenue at Ontario International Airport (hereinafter referred to as "Airport"), as more particularly delineated and outlined in red on Airports Engineer's Drawing No. 90049-82, a copy of which is attached hereto, marked Exhibit "A" and incorporated by reference herein. All rights to the use of the surface overlying said right-of-way, or as hereafter relocated or extended, shall remain in City for its use in any lawful and proper manner it may deem necessary for the operation of Airport in the promotion and accommodation of air commerce and air navigation, and City reserves the right to use on its behalf any portion of the surface areas of said right-of-way for any and all

lawful purposes; provided, however, in the event City shall, in its discretion, determine the use of any portion of such right-of-way is necessary for the construction of any improvements or facilities including, without limitation, buildings, storm drains, sewer lines, underground ducts, structures, vaults, water mains or other subsurface structures it deems necessary for the operation of Airport and that Permittee's facilities within said right-of-way must be relocated to prevent a hazardous condition which might otherwise prevail and/or unreasonable interference with said construction, then Permittee shall, at its expense, and within ninety (90) days after receipt of written notice from City, commence to remove any of the sewer lines and appurtenances from such portion of said right-of-way and relocate said sewer lines in and along such realigned right-of-way as the Executive Director of City's Department of Airports (hereinafter referred to as "Executive Director") may prescribe.

Term: Commencing July 11, 1990; subject, however, to earlier termination as herein provided.

Uses: Installation and maintenance of an eight (8) inch sewer line which will feed into the Chino Basin Municipal Water District's non-reclaimable waste water system in Ontario.

IN WITNESS WHEREOF, the parties hereto have themselves or through their duly authorized officers caused this Agreement to be executed this 10th day of January, 1991.

STANDARD TERMS AND PROVISIONS
(PERMIT)

1. Use of Designated Premises.

(a) Permittee shall not use the designated premises, nor any portion thereof, for any purpose other than that hereinabove set forth without first having had and obtained the written consent of the Executive Director of the Department of Airports (hereinafter referred to as "Executive Director").

(b) There is hereby reserved to City, its successors and assigns, for the use and benefit of the public, a right of flight for the passage of aircraft in the airspace above the surface of the premises herein leased. This public right of flight shall include the right to cause in said airspace any noise inherent in the operation of any aircraft used for navigation or flight through the said airspace or landing at, taking off from or operation on Airport. Permittee agrees not to make any claim or institute legal action against City under any theory of recovery for any interference with Permittee's use and enjoyment of the designated premises which may result from noise emanating from the operation of aircraft to or from or upon Airport except for claims or actions brought by third parties against Permittee arising from City's operation of Airport.

(c) Permittee, by accepting this Permit, agrees for itself, its successors and assigns that it will not make use of the leased premises in any manner which might interfere with the landing and taking off of aircraft from Airport or otherwise constitute a hazard to such operations. In the event the aforesaid covenant is breached, City reserves the right to enter upon the premises hereby leased and cause the abatement of such interference at the expense of Permittee.

2. Improvements and Alterations.

(a) Permittee shall make no structural improvements, additions or alterations in, to or upon the designated premises, nor erect, construct or place any sign or advertisement upon said premises, without the prior written consent of Executive Director being first had and obtained, and any conditions, restrictions or limitations relating thereto then stated by said Executive Director shall be conditions hereof as if they had been originally stated at length herein. Permittee shall also keep the designated premises and any improvements constructed thereon free and clear of liens for labor and material expended by or for Permittee or on its behalf (except when such improvement is constructed by City) and shall hold City harmless from liability with respect to any such improvements, additions or alterations made thereto.

(b) City reserves the right to further develop or improve the landing area of Airport as it sees fit, regardless of the desires or view of Permittee, and without interference or hindrance. If any such development or improvement interferes substantially with Permittee's use and occupancy of the premises demised herein, Permittee shall be entitled to an appropriate reduction in rental or termination of this Permit.

(c) Permittee agrees to comply with the notification and review requirements covered in Part 77 of the Federal Aviation Administration Regulations in the event any future structure or building is planned for the leased premises, or in the event of any planned modification or alteration of any present or future building or structure situated on the leased premises.

(d) Permittee, by accepting this Permit, expressly agrees for itself, its successors and assigns that it will not erect nor permit the erection of any structure or object nor permit the growth of any tree of the land leased hereunder above the mean sea level elevation obstruction contours shown on Exhibit "A". In the event the aforesaid covenants are breached, City reserves the right to enter upon the land leased hereunder and to remove the offending structure or object and cut the offending tree, all of which shall be at the expense of Permittee.

3. Ownership of Improvements. During the term of this Permit, title to all structures, improvements, facilities or alterations constructed or installed by Permittee shall remain in Permittee. Upon the termination of this Permit, said structures, improvements, facilities or alterations, other than machines, equipment, trade fixtures and similar installations of a type commonly removed without structural damage to the designated premises, shall become a part of the land upon which they are constructed, or of the building to which they are affixed, and title thereto shall thereupon vest in City. In the event the removal of any fixture damages any part of the designated premises, Permittee shall repair such damage and restore the designated premises to as good condition as the same was in upon completion of the construction, reasonable wear and tear excepted.

4. Maintenance of Designated Premises. Permittee shall maintain the designated premises, including any structures, improvements and facilities constructed by Permittee thereon, in good condition and in compliance with all requirements of law. Permittee shall also use the designated premises, so far as is reasonably practicable, in such manner so as not to interfere unreasonably with the use of other premises adjoining said designated premises on Airport.

5. City's Right of Access and Inspection. City, by its officers, employees, agents, representatives and contractors, shall have the right at all reasonable times and in a reasonable manner, upon notice to Permittee, to enter upon the designated premises for the purpose of inspecting the same or for doing any act or thing which City may be obligated or have the right to do under this Permit, or otherwise, and no abatement of rental shall be claimed by or allowed to Permittee by reason of the exercise of such rights. In the exercise of rights under this section, City, its officers, employees, agents and contractors shall use their best efforts to avoid interfering with the conduct of Permittee's business on the designated premises as herein authorized.

6. Restrictions and Regulations. Permittee agrees to abide by any and all: (1) applicable rules, regulations, orders and restrictions which are now in force or which may be hereafter adopted by City with respect to the operation of Airport; (2) orders, directives or conditions issued, given or imposed by Executive Director with respect to the use of the roadways, driveways, curbs, sidewalks and parking areas in and about said Airport; and (3) applicable laws, ordinances, statutes, rules, regulations or orders of any governmental authority, federal, state or municipal, lawfully exercising jurisdiction over the Airport or Permittee's occupation or use of the designated premises. Nothing herein contained shall be deemed to impair Permittee's right to contest any such rules, regulations, orders, restrictions, directives or conditions or the reasonableness thereof. City shall not be liable to Permittee for any damage to, or for any diminution or deprivation of, Permittee's rights hereunder on account of the exercise of any such authority, or as may arise from Airport development or operation in the area of the designated premises during the term of this Permit, unless the exercise thereof shall so interfere with Permittee's use and occupancy of the leasehold estate herein created so as to constitute a constructive eviction or a termination, in whole or in part, of this Permit by operation of law or otherwise.

Permittee shall abide by all applicable local, state and federal laws and regulations relative to the design and installation of facilities to accommodate handicapped persons.

7. Insurance.
(a) Permittee shall procure at its expense, and keep in effect at all times during the term of this Permit, the types and amounts of insurance specified on page 12 hereof. The specified insurance shall also, either by provisions in the policies, by City's own endorsement form or by other endorsement attached to such policies, include and insure City, its Department of Airports, its Board of Airport Commissioners, and all of its officers, employees and agents, their successors

and assigns, as insureds, against the areas of risk described on page 12 hereof as respects Permittee's acts or omissions in its operations, use and occupancy of the premises hereunder or other related functions performed by or on behalf of Permittee at Airport.

(b) Each specified insurance policy (other than Workers' Compensation and Employers' Liability and fire and extended coverages) shall contain a Severability of Interest (Cross Liability) clause which states, "It is agreed that the insurance afforded by this policy shall apply separately to each insured against whom claim is made or suit is brought except with respect to the limits of the company's liability," and a Contractual Endorsement which shall state, "Such insurance as is afforded by this policy shall also apply to liability assumed by the insured under this Permit with the City of Los Angeles."

All such insurance shall be primary and noncontributing with any other insurance held by City's Department of Airports where liability arises out of or results from the acts or omissions of Permittee, its agents, employees, officers, assigns, or any person or entity acting for or on behalf of Permittee. Such policies may provide for reasonable deductibles and/or retentions acceptable to Executive Director based upon the nature of Permittee's operations and the type insurance involved.

(c) City shall have no liability for any premiums charged for such coverage(s). The inclusion of City, its Department of Airports, its Board, and all of its officers, employees and agents, and their agents and assigns, as insureds is not intended to, and shall not, make them, or any of them, a partner or joint venturer with Permittee in Permittee's operations at Airport. Upon failure of Permittee to provide and maintain the insurance required herein after ten (10) days prior written notice to comply, City may (but shall not be required to) procure such insurance at Permittee's expense.

At least ten (10) days prior to the expiration date of the above policies, documentation showing that the insurance coverage has been renewed or extended shall be filed with City. If such coverage is cancelled or reduced, Permittee shall, within fifteen (15) days of such cancellation of coverage, file with City evidence that the required insurance has been reinstated or provided through another insurance company or companies.

(d) Permittee shall provide proof of all specified insurance and related requirements to City either by production of the actual insurance policy(ies), by use of City's own endorsement form(s), by broker's letter acceptable to Executive Director in both form and content in the case of foreign

insurance syndicates, or by other written evidence of insurance acceptable to Executive Director. The documents evidencing all specified coverages shall be filed with City prior to Permittee occupying the designated premises. They shall contain the applicable policy number, the inclusive dates of policy coverages and the insurance carrier's name, shall bear an original signature of an authorized representative of said carrier, and shall provide that such insurance shall not be subject to cancellation, reduction in coverage or nonrenewal except after written notice by certified mail, return receipt requested, to the City Attorney of the City of Los Angeles at least thirty (30) days prior to the effective date thereof. City reserves the right to have submitted to it, upon request, all pertinent information about the agent and carrier providing such insurance.

City and Permittee agree that the insurance policy limits specified herein shall be reviewed for adequacy annually throughout the term of this Permit by Executive Director who may, thereafter, require Permittee to adjust the amounts of insurance coverage to whatever amount said Executive Director deems to be adequate.

8. City Held Harmless. In addition to the provisions of Section 7 herein, Permittee shall indemnify, defend and keep and hold City, including its Board of Airport Commissioners (hereinafter referred to as "Board"), and City's officers, agents, servants and employees, harmless from any and all costs, liability, damage or expense (including costs of suit and fees and reasonable expenses of legal services) claimed by anyone by reason of injury to or death of persons, or damage to or destruction of property, including property of Permittee, sustained in, on or about the designated premises or arising out of Permittee's use or occupancy thereof, to the extent that such damages or costs are proximately caused by the acts or omissions of Permittee, its agents, servants or employees.

9. Taxes and Licenses. Permittee shall pay all taxes of whatever character that may be levied or charged upon the leasehold estate in the designated premises, or upon Permittee's improvements, fixtures, equipment or other property thereon or upon Permittee's use thereof. Permittee shall also pay all license or permit fees necessary or required by law or regulation for the conduct of Permittee's business or use of the designated premises. The obligation, however, shall not prevent Permittee from contesting the validity and/or applicability of any of the above charges and during the period of any such lawful contest, Permittee may refrain from making, or direct the withholding of, any such payment without being in breach of the above provisions. Upon a final determination in which Permittee is held responsible for such taxes and/or fees, Permittee shall promptly pay the required amount plus all legally imposed interest, penalties and surcharges.

In addition, by executing this Permit and accepting the benefits thereof, a property interest may be created known as a "possessory interest". If such possessory interest is created, Permittee, as the party in whom the possessory interest is vested, shall be subject to the payment of the property taxes levied upon such interest.

10. Assignments and Subleases. Permittee shall not, in any manner, assign, transfer or encumber this Permit, or any portion thereof or any interest therein, without the prior written consent of Board, nor sublet or sublease the whole or any part of the designated premises, nor license or permit the use of the same, in whole or in part, without the prior written consent of Executive Director. Consent to one assignment, subletting, use or occupation shall not be deemed to be a consent to any subsequent assignment, subletting, occupation or use. This Permit shall not, nor shall any interest therein, be assignable as to the interest of Permittee by operation of law without the prior written consent of City.

City shall not unreasonably withhold its consent to the assignment of this Permit or the subletting of the premises or any portion thereof; provided, however, that the use of said premises by any such assignee or sublessee must be consistent with the use authorized herein. A request by Permittee for assignment or subletting shall be submitted to City in writing along with a fully executed copy of the proposed assignment or sublease.

When the proper consent has been received, this Permit shall be binding upon and shall inure to the benefit of the heirs, successors, executors, administrators and assigns of the parties hereto.

11. Default and Termination.

(a) Not Involving Rent or Other Payments.

In the event Permittee fails to abide by the terms and conditions of this Permit, not involving the failure to pay rent or other payments, City shall give Permittee written notice to correct the defect or default and if the same is not corrected, or substantial steps are not taken toward accomplishing such correction, within ten (10) days after Permittee's receipt of such notification, City may terminate this Permit upon giving Permittee a thirty (30) day written notice.

(b) Bankruptcy.

In case of the bankruptcy of Permittee, or the appointment of a receiver for Permittee, or if a receiver is appointed to take possession of the designated premises as a result of any act or omission of Permittee, or if Permittee makes an assignment of this Permit for the benefit of creditors, or if possession of the designated premises is taken

by virtue of any attachment, execution or the levy of any judicial process, and such appointment or taking is not discharged or terminated within sixty (60) days, City, at its election, may, without notice, terminate this Permit.

12. Waiver. The waiver by either party of any breach of any term, covenant or condition herein contained shall not be deemed to be a waiver of any other term, covenant or condition, or of any subsequent breach of the same term, covenant or condition. The subsequent acceptance of rent hereunder by City shall not be deemed to be a waiver of any preceding breach by Permittee of any term, covenant or condition of this Permit other than the failure of Permittee to pay the particular rental so accepted, regardless of City's knowledge of such preceding breach at the time of acceptance of such rent.

13. Attorney's Fees. If City shall, without any fault, be made a party to any litigation commenced by or against Permittee arising out of Permittee's use or occupancy of the designated premises and as a result of which Permittee is finally adjudicated to be liable, then Permittee shall pay all costs, expenses and reasonable attorney's fees incurred by or imposed upon City in connection with such litigation. In any action by City or Permittee for recovery of any sum due under this Permit, or to enforce any of the terms, covenants or conditions contained herein, the prevailing party shall be entitled to reasonable attorney's fees in addition to costs, expenses and necessary disbursements incurred in such action. Each party shall give prompt notice to the other of any claim or suit instituted against it that may affect the other party.

14. Hazardous and Other Regulated Substances. Permittee agrees to accept sole responsibility for its full compliance on the designated premises with any and all applicable present and future rules, regulations, restrictions, ordinances, statutes, laws and/or other orders of any governmental entity regarding the use, storage, handling, distribution, processing and/or disposal on the designated premises of hazardous wastes, extremely hazardous wastes, hazardous substances, hazardous materials, hazardous chemicals, toxic chemicals, toxic substances, pollutants, contaminants or other similarly regulated substances (hereinafter referred to as "hazardous substances") regardless of whether the obligation for such compliance or responsibility is placed on the owner of the land, on the owner of any improvements on the leasehold, on the user of the land, or on the user of the improvements. Said hazardous substances shall include, but not be limited to, gasoline, aviation, diesel and jet fuels, lubricating oils and solvents. Permittee agrees that any damages, penalties or fines levied on City and/or Permittee as a result of Permittee's noncompliance with any of the above on the designated premises shall be the sole responsibility of Permittee and further, that Permittee shall indemnify and pay

and/or reimburse City for any damages, penalties or fines that City pays as a result of noncompliance with the above.

In the case of a hazardous substance spill, leak or discharge on the designated premises, the improper storage of hazardous substances on the designated premises, or the contamination of the designated premises, by Permittee or its employees, servants, agents, contractors or subcontractors, Permittee agrees to make, or cause to be made, any necessary repairs or corrective actions as well as to clean up and remove any leakage, contamination or contaminated ground. In the case of any hazardous substance spill, leak, discharge or contamination by Permittee or its employees, servants, agents, contractors or subcontractors, which affects other property of City or its tenants' property, Permittee agrees to make, or cause to be made, any necessary corrective actions to clean up and remove any spill, leakage or contamination to the satisfaction of Executive Director. If Permittee fails to repair, clean up, properly dispose of, or take any other corrective actions as required herein, City may (but shall not be required to) take all steps it deems necessary to properly repair, clean up, or otherwise correct, the conditions resulting from the spill, leak or contamination. Any such repair, cleanup or corrective actions taken by City shall be at Permittee's sole cost and expense and Permittee shall indemnify and pay for and/or reimburse City for any and all costs (including any administrative costs) City incurs as a result of any repair, cleanup or correction action it takes.

15. Gates Under Control of Tenants. Permittee shall be responsible for the maintenance and repair of that portion of the Airport perimeter fence, including gates and doors, that are located on the designated premises or controlled by Permittee. Permittee shall comply fully with applicable provisions of the Federal Aviation Administration Regulations, 14 CFR, Part 107 [and Part 108 if Permittee is an air carrier], including the establishment and implementation of procedures acceptable to Executive Director to control access from the designated premises to air operation areas in accordance with the Airport Security Program required by Part 107. Further, Permittee shall exercise exclusive security responsibility for the designated premises and, if Permittee is an air carrier, do so pursuant to Permittee's Federal Aviation Administration approved Air Carrier Standard Security Program used in accordance with 14 CFR, Part 129.

In addition to the foregoing, gates and doors located on the designated premises which permit entry into restricted areas at Airport shall be kept locked by Permittee at all times when not in use or under Permittee's constant security surveillance. Gate or door malfunctions which permit unauthorized entry into restricted areas shall be reported to Department of Airports' Operations Bureau without delay and

shall be maintained under constant surveillance by Permittee until repairs are affected by Permittee or City.

All civil penalties levied by the Federal Aviation Administration for violation of Federal Aviation Regulations pertaining to security gates or doors located on the designated premises or otherwise controlled by Permittee shall be the sole responsibility of Permittee. Permittee agrees to indemnify City for any federal civil penalty amounts City must pay due to any security violation arising from the use of Permittee's leasehold or the breach of any obligation imposed by this Section.

16. Handicapped Access. If for any reason handicapped access requirements are necessitated in existing or future facilities, they will be provided at Permittee's expense.

17. Business Tax Registration. Permittee represents that it has registered its business with the City Clerk of City and has obtained and presently holds from that Office a Business Tax Registration Certificate or a Business Tax Exemption Number required by City's Business Tax Ordinance (Article 1, Chapter 2, Sections 21.00 and following, of City's Municipal Code). Permittee shall maintain, or obtain as necessary, all such Certificates required of it under said Ordinance and shall not allow any such Certificate to be revoked or suspended during the term hereof.

18. Interpretation.
(a) The language of this Permit shall be construed according to its fair meaning, and not strictly for or against either City or Permittee.

(b) The section headings appearing herein are for the convenience of City and Permittee, and shall not be deemed to govern, limit, modify or in any manner affect the scope, meaning or intent of the provisions of this Permit.

(c) If any provision of this Permit is determined to be void by any court of competent jurisdiction, then such determination shall not affect any other provision of this Permit, and all such other provisions shall remain in full force and effect.

(d) It is the intention of the parties hereto that if any provision of this Permit is capable of two constructions, one of which would render the provision void and the other of which would render the provision valid, then the provision shall have the meaning which renders it valid.

(e) This Permit shall be construed and enforced in accordance with the laws of the State of California.

(f) In each instance herein where City's, Board's or Executive Director's approval or consent is required before Permittee may act, such approval or consent shall not be unreasonably withheld.

(g) The use of any gender herein shall include all genders, and the use of any number shall be construed as the singular or the plural, all as the context may require.

(h) It is understood and agreed that nothing herein contained shall be construed to grant or authorize the granting of an exclusive right within the meaning of Section 308 of the Federal Aviation Act.

(i) This Permit shall be subordinate to the provisions and requirements of any existing or future agreement between City and the United States relative to the development, operation or maintenance of Airport.

(j) This Permit and all the provisions hereof shall be subject to whatever right the United States Government now has or in the future may have or acquire affecting the control, operation, regulation and taking over of Airport or the exclusive or nonexclusive use of Airport by the United States during the time of war or national emergency.

19. Other Agreements Not Affected. This Permit, and the terms, conditions, provisions and covenants hereof, shall apply only to the designated premises herein particularly described and shall not in any way change, amend, modify, alter, enlarge, impair or prejudice any of the rights, privileges, duties or obligations of either of the parties hereto, under or by reason of any other agreement between said parties, except that nothing contained in such other agreement shall limit the use by Permittee of the within designated premises for the purpose herein referred to.

20. Notices. Written notices to City hereunder and to the City Attorney of the City of Los Angeles shall be given by registered or certified mail, postage prepaid, and addressed to said parties at Department of Airports, 1 World Way, Post Office Box 92216, Los Angeles, CA 90009-2216, or to such other address as these parties may designate by written notice to Permittee.

Written notices to Permittee hereunder shall be given by registered or certified mail, postage prepaid, and addressed to General Electric Company, 1923 East Avion Street, Ontario, CA 91761, or to such other address as Permittee may designate by written notice to City.

The execution of any such notice by Executive Director shall be as effective as to Permittee as if it were executed by

Board or by Resolution or Order of said Board, and Permittee shall not question the authority of Executive Director to execute any such notice.

All such notices shall be delivered personally to Executive Director or to the Office of the City Attorney, Airports Division, in the one case, or to Permittee in the other case, or shall be deposited in the United States mail, properly addressed as aforesaid with postage fully prepaid by certified or registered mail, and shall be effective upon receipt.

CITY OF LOS ANGELES - DEPARTMENT OF AIRPORTS
INSURANCE REQUIREMENTS

NAME: General Electric Company

AGREEMENT/OR ACTIVITY: Non-Exclusive Right-of-Way License Agreement - ONT.

The insured must maintain insurance coverages at limits normally required of its type operation; however, the following coverages noted with an "X" are the minimum required and must be at least the level of the Combined Single Limit indicated.

LIMITS

X Workers' Compensation (Statutory)/Employer's Liability Standard
 Broad Form All States Endorsement
 Voluntary Compensation Endorsement
 Longshoremen's and Harbor Workers' Compensation Act Endorsement

X General Liability or Aviation/Airport Liability \$ 4,000,000
X Automobile Liability \$ 4,000,000

Subject: **Phase I Environmental Site Assessment
GE Engine Services, Inc.
1923 East Avion Street
Ontario, California 91761
MACTEC Project 4951-05-2921.01**

Dear Mr. Grubbs:

Attached is our Phase I Environmental Site Assessment (ESA) report for the above-referenced site. In performing the Phase I ESA, we evaluate whether activities at the site or nearby properties may have contaminated the site's soil or ground water.

Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. This warranty is in lieu of all other warranties, expressed or implied. This report has been prepared for GE Engine Services, Inc. to be used solely in evaluating potential environmental implications at the subject site. The report has not been prepared for use by other parties, and may not contain sufficient information for purposes of other parties or other uses.

We appreciate the opportunity to work with you on this project. Please contact us if you have any questions or if we may be of further service.

Respectfully submitted,

MACTEC Engineering and Consulting, Inc.

Michael Koepnick
Staff Environmental Scientist

EXECUTIVE SUMMARY

GE Engine Services, Inc., engaged MACTEC Engineering and Consulting, Inc. (MACTEC) to perform a Phase I Environmental Site Assessment (ESA) of GE Engine Services, Inc. (SITE), located at 1923 East Avion Street in the City of Ontario, San Bernardino County, California. Our services were provided in general accordance with MACTEC Proposal 4951-05-9421R dated September 13, 2005.

This executive summary is a synopsis of findings based on our Phase I ESA. For detailed information regarding the findings, please refer to the text of our report.

The SITE is located off Avion Street in the City of Ontario, San Bernardino County, California. The SITE is comprised of approximately 30 structures, including 4 large steel corrugated Hangars (each at least 24,000 sq. ft), an Administrative building attached to Hangar 5, a Health Services/Medical building, a Hazardous Materials and Waste Canopy, an IT/Data Processing building, a Wastewater Treatment building, a Facility Maintenance building, an Air Compressor building, a Flowroom building (Fuel nozzle purging, Gear box tooling, Oil check machines, etc.), various warehouse buildings, repair buildings, cleaning areas, labs, offices, a janitorial supply canopy, and other small electrical sheds, etc. Hangars 2 and 3 are no longer used for operations, just for storage of supplies, inventory, and maintenance equipment. Hangars 1 and 5 are in full operation of assembly and disassembly of aircraft engines. Many of the other buildings at the SITE are vacant or sparsely used. One main hazardous materials and waste canopy exists just southeast of Hangar 3. Other 'Hazardous Waste Satellite Accumulation Areas' are found throughout the SITE inside the Hangars, lab testing areas, and cleaning areas, etc. Hangar 5, which is adjoined by the Administrative building, is the only structure at the SITE with a second floor (offices, records retention).

The SITE is located in an area surrounded by similar commercial and industrial buildings and the Ontario International Airport.

- North: Asphalt-covered lots and roads and the Ontario International Airport;
- East: An open asphalt-covered lot, Hangar 4 (no longer part of the SITE), and then Mercury Air Center, Inc.
- South: A blacktop parking lot for the SITE (good condition near the Admin bldg., more cracks and weeds as you go further south) and East Avion Street. Across East Avion Street to the south and southeast are other commercial businesses, including Airport Group International, Inc. (south/southwest – closest building south of the SITE), and others. South of these businesses is the Union Pacific Railroad. Mission Boulevard is located beyond the railroad tracks.
- West: To the west of the SITE are other airport buildings and commercial businesses, such as Guardian Jet Center (west/southwest).

The SITE is an office and overhaul plant for GE Engine Services, Inc. Aircraft engines are assembled and disassembled here for maintenance and repair. Parts and supplies for these operations are stored, tested, and calibrated at the SITE. Many chemicals are used in operations at the SITE for purposes extending from lubrication of machine parts, cleaning, and treating wastewater. Chemicals used include: Propane, Potassium Hydroxide (KOH), Sulfuric Acid (H²SO⁴), Castrol Oil, Zyglo Penetrant, Magna Flux Zyglo Remover, Cimperial, Triton, Heavy Duty Stripper, Cee Bee, Calcium Hydroxide, Diamond Crystal with softener care additives, Oxygen, Versene, and various other oils, grease, solvents, and polymers, etc.

Based on historical research, the SITE was first developed with buildings in approximately 1949. The 1949 aerial photograph is the earliest aerial photograph MACTEC reviewed that shows structures at the SITE location. In the 1949 photo, aircraft are visible parked to the northwest of Hangars 1 and 2. Topographic maps of the area prior to this time were reportedly altered during World War II for security measures and may not accurately depict SITE conditions during that timeframe. The topographic maps indicate that prior to 1949 the area where the SITE is currently located was an open area. In approximately 1949, Northrop Aircraft Company began aircraft manufacturing operations on the northern side of the SITE in Hangars 1 and possibly Hangar 2. Hangar 3 appears to have been constructed in approximately 1953. The Regional Water Quality Control Board (RWQCB) indicates that Douglas occupied Hangar 2 in the early 1950s.

By 1955, General Electric Engine Services, Inc., (GEES) was reported to have moved their operations to the SITE replacing both Northrop and Douglas. Aerial photos indicate that the Stockroom (former Hangar 4 – no longer part of SITE) was constructed sometime in the mid-1950s to 1960s. Meredith/Boli Associates (MBA) stated in their 1992 report that from approximately 1956 to 1980, Lockheed Aircraft Service Company occupied the Stockroom building. GEES began operations in the Stockroom in approximately 1980. Hangar 5 and the Administrative building are not visible until the 1989 aerial photograph. Mr. Bradley Grubbs, Environmental Health and Safety (EHS) Site Focal Point for GE Engine Services, Inc., stated that these buildings were the most recently constructed buildings at the SITE (circa 1980).

The number of USTs that may have historically existed at the SITE is unclear. The EDR report states that the SITE is found on the CA HIST UST list (California Historical USTs) which claims that 17 USTs have existed at the SITE. EDR also reports the SITE is found on the SWEEPS UST list (another state list, no longer maintained) which claims 14 USTs to have existed at the SITE. Harding ESE, in their 2002 Phase I ESA, identified 15 USTs that historically existed at the SITE. They reported that all USTs had been properly removed or abandoned in place and had received acceptance of certification of closure from the DTSC in 1994. Mr. Bradley Grubbs of GE was unsure of how many USTs had historically been at the SITE; however he did confirm a finding from DTSC that one UST was abandoned in place underneath the Cleaning Line. This is the only UST Mr. Grubbs believed to still be present at the SITE.

MACTEC observed pole and pad-mounted electrical transformers throughout the SITE. All observed pad mounted transformers were dry-type, containing no PCBs. Some staining was observed near one of the pole mounted transformers near Hangar 2. The stains appeared to be dry and old. All transformers are owned and operated by Southern California Edison (SCE). SCE maintains that none of its transformers currently contain PCBs. MACTEC did not observe any leaks or stains on or around these transformers, other than what was mentioned.

The SITE was listed in the CERC-NFRAP, CORRACTS, RCRA-TSD, RCRA-Large Quantity Generator, ERNS, CA Bond Expenditure Plan, CA FID UST, HIST UST, SWEEPS UST, FINDS, TRIS, EMI, and San Bernardino County Hazardous Materials Permit databases. These listings are associated with historical environmental issues. Numerous off site properties including the Ontario International Airport are listed on various regulatory environmental databases. Based on MACTEC's review, these listed properties are not anticipated to be recognized environmental conditions (RECs) relative to the SITE.

MACTEC's investigation identified the following recognized environmental conditions (RECs), as defined by ASTM:

- Some cracks were observed in the floor inside Hangar 3 where contaminants could potentially seep through. The Hangar is a former machine shop, so oils and other chemicals may have been used. Based on this and the assessment made in the Harding ESE Phase I ESA dated September 26, 2002, detailing high ion counts of Trichloroethene (TCE) and intermediate ion counts of Tetrachloroethene (PCE) detected from Petrex static soil-gas devices in the soils southeast and southwest sides along Hangar 3.
- Inside Hangar 5, on the northwest side of the building, are former locations of a bearing cleaning room and a paint booth. These types of areas use many chemicals for operations. Also, this area currently houses a machine shop, and oil staining on the floor was observed near some machines.
- Inside Hangar 5 is the Campbell Grinder Room. Commonly, this type of area uses hazardous chemicals, such as oils, lubricants, and solvents. If any small cracks exist in the floor, the soil beneath could potentially be impacted. At the time of our reconnaissance, some floor areas were not visible as they were covered with machines, pallets, and oil/clean sweep material. We did not observe any significant cracking in the floors of Hangar 5.
- Plasma spraying reportedly took place in Hangar 2. This is generally more of a health and safety issue during spraying; however, a residue may still be present or may have washed into cracks in the floors, if any exist. A review of former files at the SITE should be performed to determine the type of spray utilized (aluminum, etc.), and potential for environmental impact.
- An Asbestos Exposure Assessment completed March 9, 2004 by Integrity Environmental Consultants Inc. showed that asbestos tiles exist in the Data Processing Building.
- The Cleaning Area inside the Hangar 1 Annex uses Hydroxide and vapor degreasers to clean parts. In the past, TCE and other hazardous solvent chemicals were used. The adjacent cleaning area on the southeast side of the Hangar 1 Annex used to be outside, where water was washed onto the pavement and ground surface.
- The Flowroom on the northeast side of Hangar 1, currently housing the Fuel Nozzle Purging area and Gear Box Tooling Room, is also the former location of a bearing cleaning area, a finger print neutralizer tank, a solvent tank, and a preservative oil tank. The Flowroom also used to be home to the Thermal Couple Room.
- The 1953 aerial photograph shows aircraft parked in the area immediately west of Hangar 3 on a surfaced area. Based on the 1953 DWR report it was a common practice to wash aircraft at these facilities. Wastewater discharged from aircraft washing operations exceeded the State's limits for phenols. Discharges were to unlined ditches and sumps. The DWR report states that in 1953 the groundwater was not impacted.
- The number of USTs to have historically existed at the SITE is unclear. Listings in the EDR report state that the SITE has historically maintained 14-17 USTs. Mr. Bradley Grubbs of GE was unsure of how many USTs had historically been at the SITE. Harding ESE reported in their 2002 Phase I ESA that 15 USTs historically existed at the SITE. They reported that all USTs had been properly removed and had received acceptance of certification of closure from the DTSC in 1994. This closure letter for 15 USTs at the SITE was not located by MACTEC. This issue should be researched further to confirm the historical and current presence of USTs at the SITE.
- A Closure Plan for the T-58 Test Cell Sump at the SITE was approved in a letter from the DTSC on August 6, 1992. GE committed in the work plan, through Dames and Moore, Inc., to conduct research to assess the quantity of wash water discharged into the sump on an annual basis. Also, GE commissioned the drilling of a boring beneath the former sump to

investigate vertical migration of contaminants. No further documentation regarding work performed or a Final Closure Report was located by MACTEC.

- Records indicate that in the 1950s, former SITE occupants Northrop Aircraft Corporation and McDonnell Douglas Aircraft Company routinely discharged industrial waste into the ground. The 2 former facilities were cited as 'probable sources of contaminants in the ground water', and requested to submit technical reports by the RWQCB. Northrop and McDonnell Douglas discharged wastewaters from aircraft washing to unlined ditches and sumps, the exact location of which can not be determined from historical records and aerial photographs.
- MACTEC recommends that a Work Plan be prepared to assess potential recognized environmental concerns addressed in this report. The Work Plan should include soil gas surveys and soil sampling, following all applicable state and local regulatory requirements.

1.0 INTRODUCTION

GE Engine Services, Inc., engaged MACTEC Engineering and Consulting, Inc., (MACTEC) to perform a Phase I Environmental Site Assessment (ESA) of GE Engine Services, Inc., located on East Avion Street in the City of Ontario, San Bernardino County, California. The work was performed under MACTEC Proposal number 4951-05-9421R that was authorized by GE Engine Services, Inc., on September 22, 2005. If other parties wish to rely on this report, please have them contact us, so we can execute a secondary client agreement.

2.0 PURPOSE, SCOPE, AND REPORT FORMAT

2.1 PURPOSE

The purpose of our Phase I ESA is to identify recognized environmental conditions resulting from past or present activities on the site or nearby properties. We performed a non-invasive survey to identify obvious sources of contamination (actual and potential) from hazardous wastes and hazardous constituents from both on- and off-site activities. The scope of services was performed in general accordance with ASTM Designation E 1527-00 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*.

2.2 SCOPE OF WORK

A Phase I ESA is intended to be a general characterization of selected environmental concerns. The characterization is based on readily ascertainable information and SITE observations. The assessment included the following services:

- **Geology, Surface Drainage, and Ground-Water Flow Assessment** — We reviewed available information regarding the geology, surface drainage, and ground-water flow within the area of the site. An interpretive model of the subject property was then generated based on the information gathered. The interpretive model was then used to identify possible pathways along which contaminants, if present, may migrate.
- **Site and Area Reconnaissance** — MACTEC employees experienced in Phase I ESAs conducted a site reconnaissance of readily accessible areas. The objective of this reconnaissance was to identify obvious sources of contamination (actual and potential) at the site that could become environmental liabilities. We looked for signs of disturbances, stained soil, stressed vegetation, and other similar, obvious surficial evidence of potential contamination. The purpose of this work was not to determine the presence, degree, or extent of contamination at the site. This would require additional assessment including sampling and chemical analyses.

During the site reconnaissance, we looked for fluid-containing major electrical devices (e.g., transformers or capacitor banks) likely to contain polychlorinated biphenyls (PCBs). The PCB status of these devices was noted based on labeling, and we made note of the general conditions of these devices, including evidence of leakage. We did not assess minor suspect PCB items such as fluorescent light fixture ballasts, or sample or test dielectric fluids.

During the site reconnaissance, we also looked for evidence of aboveground storage tanks (ASTs) and underground storage tanks (USTs) such as vent pipes, fill pipes, fuel dispensers, and other obvious evidence of ASTs and USTs.

We also conducted an area reconnaissance to assist in assessing if adjacent or nearby land uses may have contaminated the site. The area reconnaissance was conducted by touring the area by automobile and viewing particular businesses from public rights-of-way. Off-site properties were not entered.

- **Historical Review** — We reviewed past activities that occurred on or near the site to assess whether these past activities may have contaminated the site's soil or ground water.

We consulted selected references to infer past land uses on or near the site that might have contributed to soil or ground-water contamination at the site. We used the following types of references and information (depending on availability):

- Aerial photographs
 - City directories
 - Sanborn fire insurance maps
 - Building permits
 - Interviews with property management
 - Information you provide
 - Oil well maps, ground-water maps, and water well data
- **Regulatory Agency Information** — We reviewed site specific excerpts from lists published by environmental regulatory agencies. We looked for listed information on the site or nearby properties that indicated known or suspected environmental concerns. If nearby properties were listed, we assessed their potential for contaminating the site's soil or ground water. We also contacted various regulatory agencies to document whether files were available for the SITE.
- **Review of Previous Phase I Report** — We reviewed the previous Phase I report prior to performing the site and area reconnaissance and summarized the findings of the previous report in our current Phase I ESA report.

Our scope of services did not include the sampling or laboratory analysis of soil or ground water, or a limited asbestos and lead paint survey at the site.

2.3 REPORT FORMAT

Our report contains the following assessment sections:

- Geology, Surface Drainage, and Ground-Water Flow
- Site and Area Reconnaissance
- Historical Review
- Regulatory Agency Information

An evaluation section includes conclusions and recommendations based on the assessment sections.

A statement of interpretive limitations follows the recommendations.

3.0 GEOLOGY, SURFACE DRAINAGE, AND GROUND-WATER FLOW

A consideration of surface and subsurface drainage and geology are of interest because they provide an indication of the direction that contaminants, if present, could be transported.

3.1 SURFACE DRAINAGE

The site is situated at an elevation of approximately 910 feet above mean seal level and slopes gently toward the south. Surface drainage is controlled by curbs, gutters, and drain inlets and is discharged to the municipal storm drain system. The nearest drainage feature to the site is Cucamonga Creek, which drains toward the south and is located approximately 1,500 feet east of the site.

3.2 GEOLOGY

Regionally the site is located in the Transverse Range Geomorphic Province. Situated at the southern base of the east-west trending San Gabriel Mountains, the site is located on the uplifted Chino block. The Chino block (or Chino Hydrologic basin) is a south-facing, broad-asymmetrical alluvial fan complex with the primary depositional axis closest to the mountain front. Geologic materials that were primarily derived from the uplifted San Gabriel mountains consist of unconsolidated to consolidated Holocene and Quaternary-age alluvium that make up a series of water bearing aquifers intermixed by discontinuous aquicludes.

Investigations conducted in various areas of the Chino Basin suggest that alluvial deposits extend to depths ranging from approximately 700 feet to 2,000 feet. The alluvial material is composed of sediment produced primarily by erosion of the San Gabriel Mountains. Because of the rapid uplift of the San Gabriel Mountains, and their close proximity to the Chino Basin, sediment deposited in the basins is very coarse with gravels and sands as the dominant materials.

3.3 GROUND-WATER

Two important factors affecting the ground-water flow are the local topography (the slope of the land surface) and the depositional direction (the direction in which water-bearing sediments were deposited). The topography and depositional direction are important because they influence the net

direction of ground-water flow, although, in some situations, other factors (such as faults, bedrock structures, and local ground-water pumping and/or injection) may override them. Ground-water flow is a major factor in the spread of contaminants underground.

Groundwater in the basin is contained in alluvial aquifers created by the approximately 1,000 to 2,000 feet of alluvial sediments. The uppermost aquifer is reported to be unconfined and is saturated at a depth of approximately 250 to 350 feet below ground surface. The groundwater aquifers are recharged in a small part by surface water infiltration and to a much larger extent by runoff from the nearby San Gabriel Mountains during storm events.

The Site is in the Chino Basin Watermaster Water Management Zone Number 2. Chino Basin Watermaster Optimum Basin Management Program Draft Report indicates that groundwater is located 625 feet below ground surface. The water table in the City of Ontario, which is in close proximity to the Site, occurs approximately 250 to 300 feet below ground surface. The groundwater at GE's test cell facility located 0.25 miles southeast of the Site is at approximately 250 feet below ground surface. The gradient of the water table beneath the Site is generally to the southwest (Dames and Moore, 1992). Chino Basin Watermaster reports that the gradient throughout the Chino Basin is south/southwest.

3.4. POTENTIAL PATHWAYS FOR CONTAMINANT MIGRATION

Local pathways of contaminant migration probably follow the topography, the ground-water gradient, the depositional direction, and/or the orientation of bedrock joints and fractures. The contaminant sources most likely to affect the site are either up gradient, up slope (of the surface drainage), opposite the depositional direction, and/or along bedrock structure trends. Based on the information presented above, it is our opinion that the probable direction of contaminant migration underground is toward the south, which is the anticipated direction of shallow ground-water flow.

3.5 OIL AND GAS WELLS

Oil and gas wells are potential concerns when they seep oil or gas, are not abandoned to current regulations, or have associated surface contamination. They may also be associated with methane hazards. This section discusses the oil wells reported on the records we reviewed. Unreported "wildcat" oil wells could be on or near the site.

The site is not located in an oil or gas field. No documented wells have been drilled within 1 mile of the site. The nearest well is the "Argyle Campbell & Co." well located approximately 6,500 feet east-northeast of the site. The well, which was drilled in 1954, is designated as plugged and abandoned (CDOG, 1996).

4.0 REVIEW OF PAST PHASE I REPORT

For the purpose of this Phase I Environmental Site Assessment, MACTEC reviewed a past Phase I Report, conducted by Harding ESE, Inc., (Harding ESE) in 2002 (submitted November 4, 2002). Harding ESE prepared a Phase I ESA for three specific buildings located at the GEES facility, 1923 East Avion Street, Ontario, California. The Area of focus for their report included Hangar 3, Tool Control and Stockroom (former Hangar 4). Since Hangar 4 is no longer part of the SITE, the findings from the Harding ESE Phase I discussed below will focus on Hangar 3 and other pertinent information regarding the current SITE.

Based on Harding ESE's research, the SITE was first developed with buildings in approximately 1948. The 1948 aerial photograph is the earliest aerial photograph Harding ESE could obtain and shows that Hangars 1 and 2 had been constructed with open areas east and south of these buildings. In the 1948 photo, aircraft were visible parked to the northwest of Hangar 1. Topographic maps of the area prior to this time were reportedly altered during World War II for security measures and may not accurately depict SITE conditions during that timeframe. According to Harding ESE, topographic maps indicate that prior to 1948 the area where the SITE is currently located was an open area.

In approximately 1948, Northrop Aircraft Company began aircraft manufacturing operations on the northern side of the site in Hangars 1 and possibly Hangar 2. In the late 1950's or early 1960's the first section of Tool Control was constructed approximately 25 feet west of Hangar 1. The rest of Tool Control was constructed before 1968. Harding ESE states that Hangar 3 appeared to have been constructed in approximately 1952. Meredith/Boli Associates (MBA) in their report stated that Douglas Aircraft was reported to have begun operations on the southern side of the Site in approximately 1952. Harding ESE made several inquiries to determine which building Douglas occupied. Harding ESE could not determine whether Douglas occupied Hangar 2 or Hangar 3. The MBA report indicated that Douglas occupied Hangar 3. The Regional Water Quality Control Board (RWQCB) indicated that Douglas occupied Hangar 2. Harding ESE contacted the Ontario Airport and the City of Ontario and neither had records detailing Douglas' occupancy. Based on the RWQCB information, the 1953 Division of Water Resources report, and the aerial photograph review, Harding ESE believed that Douglas occupied Hangar 2.

By 1955, General Electric Engine Services, Inc., (GEES) was reported to have moved their operations to the SITE replacing both Northrop and Douglas. Aerial photos reviewed by Harding ESE indicated that the Stockroom (former Hangar 4 – no longer part of SITE) was constructed sometime in the mid-1950s to 1960s. MBA reported that from approximately 1956 to 1980, Lockheed Aircraft Service Company occupied the Stockroom building. GEES began operations in the Stockroom in approximately 1980.

Harding ESE conducted its inspection on October 10 and 18, 2001 that included walking the grounds of their Area of Focus, performing a drive-by reconnaissance of the adjacent properties and conducting a limited walk through inspection of the grounds of the facility. During the inspection, evidence of clarifiers or USTs was not observed in their Area of Focus. No chemically stained surfaces or stressed vegetation were observed. No evidence of groundwater monitoring wells was observed in the Area of Focus either.

Harding ESE identified 15 USTs that historically existed at the SITE. They reported that all USTs had been properly removed and had received acceptance of certification of closure from the DTSC in 1994.

The Harding ESE 2002 Phase I Report concluded the following potential RECs:

- The 1953 aerial photograph shows aircraft parked in the area immediately west of Hangar 3 on a surfaced area. Based on the 1953 DWR report it was a common practice to wash aircraft at these facilities. Wastewater discharged from aircraft washing operations exceeded the State's limits for phenols. Discharges were to unlined ditches and sumps.
- The Draft 1993 California Regional Water Quality Control Board (RWQCB), Santa Ana Region, report indicates that: high ion counts of Trichloroethene (TCE) were detected from Petrex static soil-gas devices in the soils southeast and southwest sides along Hangar 3. Intermediate ion counts of Tetrachloroethene (PCE) were detected in samplers along the southwest side and southeast side of Hangar 3. The RWQCB indicated it felt Northrop manufacturing activities caused the contamination.
- The Site including Hangar 3 and Tool Control were not connected to the City of Ontario sewer system until 1985. Reports on the location or closure of septic tanks or leach fields associated with the Area of Focus could not be located

- The 1949 aerial photograph shows aircraft parked in the area currently occupied by Tool Control. The photograph shows that the soil is darkened/discolored in an area directly west of Hangar 1 or in the present location of Tool Control.
- Northrop and Douglas are listed in the California SLIC listing for activities while at the site. SLIC contains information regarding properties that have impacted groundwater or have the potential to impact groundwater. As previously stated, Northrop and Douglas discharged wastewaters from aircraft washing to unlined ditches and sumps, the location of which can not be determined. (Division of Water Resources report).
- A 1990 sewer and plumbing facility diagram by the firm Gabel, Cook, and Becklund indicates that a "sump" was located approximately 25 feet east of Tool Control between Flow Control at the northern end of Hangar 1 (these buildings are not included in the Area of Focus). The sump was identified during the Site investigation. The sewer line for this sump runs beneath Tool Control. The sump and associated sewer line have the potential to have impacted soils associated with Tool Control. Harding ESE could not determine if the sump was active and did not identify sampling data or closure information for this sump during the ESA.

5.0 SITE AND AREA RECONNAISSANCE

In performing the site and area reconnaissance, our assessor describes the site and looks for obvious signs of items that may be a source of environmental concern, such as aboveground storage tanks (ASTs), underground storage tanks (USTs), hazardous materials, and hazardous wastes.

Some of the items or activities we observe on the site may be associated with environmental concerns. Certain businesses or occupations may typically use hazardous substances or create hazardous waste. Storage tanks may leak and contaminate soil and ground water. Other signs of potential environmental concerns include unusual odors, pools of liquids, drums, unidentified containers, items that may contain polychlorinated biphenyls (PCBs), stains or corrosion, and drains or sumps.

Ms. Kathleen McDonnell and Mr. Michael Koepnick, both MACTEC environmental professionals experienced in similar site assessments, performed the reconnaissance on October 11, 2005. Mr. Bradley Grubbs and a GE Engine Services intern from UC-Riverside escorted the MACTEC employees during the reconnaissance, and answered questions about the SITE and its operations.

For a depiction of the site and surrounding properties, see Figure 1, Site Location Map and Figure 2, Site Vicinity.

5.1 SITE RECONNAISSANCE

5.1.1 Site Description

The SITE is located off Avion Street in the City of Ontario, San Bernardino County, California. The SITE is comprised of approximately 30 structures, including 4 large steel corrugated Hangars (each at least 24,000 sq. ft), an Administrative building attached to Hangar 5, a Health Services/Medical building, a Hazardous Materials and Waste Canopy, an IT/Data Processing building, a Wastewater Treatment building, a Facility Maintenance building, an Air Compressor building, a Flowroom building (Fuel nozzle purging, Gear box tooling, Oil check machines, etc.), various warehouse buildings, repair buildings, cleaning areas, labs, offices, a janitorial supply canopy, and other small electrical sheds, etc. Hangars 2 and 3 are no longer used for operations, just for storage of supplies,

inventory, and maintenance equipment. Hangars 1 and 5 are in full operation of assembly and disassembly of aircraft engines. Many of the other buildings at the SITE are vacant or sparsely used. One main hazardous materials and waste canopy exists just southeast of Hangar 3. Other 'Hazardous Waste Satellite Accumulation Areas' are found throughout the SITE inside the Hangars, lab testing areas, and cleaning areas, etc. Hangar 5, which is adjoined by the Administrative building, is the only structure at the SITE with a second floor (offices, records retention).

The SITE contains office and overhaul areas for GE Engine Services, Inc., Aircraft engines are assembled and disassembled here for maintenance and repair. Parts and supplies for these operations are stored, tested, and calibrated at the SITE. Many chemicals are used in operations at the SITE for purposes extending from lubrication of machine parts to cleaning to treating wastewater. Chemicals used include: Propane, Potassium Hydroxide (KOH), Sulfuric Acid (H^2SO^4), Castrol Oil, Zyglo Penetrant, Magna Flux Zyglo Remover, Cimperial, Triton, Heavy Duty Stripper, Cee Bee, Calcium Hydroxide, Diamond Crystal with softener care additives, Oxygen, Versene, and various other oils, grease, solvents, and polymers, etc.

MACTEC observed pole and pad-mounted electrical transformers throughout the SITE. All observed pad mounted transformers were dry-type, containing no PCBs. Some staining was observed near one of the pole mounted transformers near Hangar 2. The stains appeared to be dry and old. All transformers are owned and operated by Southern California Edison (SCE). SCE maintains that none of its transformers contain PCBs. MACTEC did not observe any leaks or stains on or around these transformers, other than what was mentioned.

5.1.1.1 Hangars

Hangar 1 – The 25,752 sq. foot Hangar 1 houses the areas for assembly and disassembly of engine fans, amongst other office, cleaning bay, and hazardous waste satellite storage areas. The floors inside Hangar 1 are concrete, and appeared to be in good condition.

An annex to Hangar 1 exists on the southeast side of the building. This 12,600 sq. foot annex was added to Hangar 1 sometime between 1953 and 1968 (by aerial photographs) for more operations and storage room. Assembly and disassembly of gear boxes is the main operation in the annex. It has its own hazardous waste satellite storage area and a cabinet for flammable materials storage. Within the annex to Hangar 1 are also heavy cleaning and

inspecting areas. The inspection area is where a penetrant solution is sprayed onto the parts of the engine fan border to alleviate imperfections and such. Trench drainage exists in the floor underneath this area, where the wastewater and chemicals are collected and pumped to the wastewater treatment building. In this inspection area is also a mag-particle machine and a demagnetizing unit.

Also in the annex is a cleaning area for decoking carbon buildup. In this area are tanks of hot and cold water, and sodium hydroxide for removing grease and oil. Once again, trench drainage exists, with the wastewater and chemicals being pumped to the wastewater treatment building. Adjacent to this decoking area is a steam cleaning area that also drains to the wastewater treatment building. These areas use many chemicals in current cleaning operations. Historically, TCE and other heavy solvents have also been used here.

Hangar 1 annex also has an attached adjacent 9,000 sq. foot building called the Balance Area. In this area, parts are inspected and stored. A heat treating oven is used here, and other areas are used for welding.

Hangar 1 also has an adjacent 4,110 sq. foot office building on the west, and a 5,050 sq. foot building on the east called the Flowroom. The Flowroom is the former location of the bearing cleaning area, the finger print neutralizer tank, a solvent tank, and a preservative oil tank, amongst other chemicals. It was also formerly the Thermal Couple room. Currently, the Flowroom is used as a fuel nozzle purging area, where fuel nozzles are cleaned with nitrogen gas and oil. Hazardous waste drums are located in the fuel nozzle purging area, used for oily rags, clay absorbents, and solvent rags. One flammable materials storage cabinet exists in the fuel nozzle purging area. Also in the Flowroom is the Gear Box Tooling Room. This room is where assembly of gear boxes occurs.

Adjacent northwest of Hangar 1 are 4 warehouse buildings. These connecting buildings serve as storage areas for parts and supplies, and also as a customer hold area.

Hangar 2 – The 24,272 sq. foot Hangar 2 no longer houses operations. It sits southeast adjacent to Hangar 5, and instead is used for storage of parts, supplies, and inventory. Hangar 2 is however, the former location of Plasma Spraying at the SITE. No significant cracks in the floor were noted on the day of our visit. Included in the supply storage in

Hangar 2 is a 'Cold Room', where certain chemicals and heat sensitive sealers and epoxies are stored in refrigerators and freezers. Other chemicals are stored in this room in non-refrigerated areas as well, including grease, oil, lubes, epoxy, primer, alodine, and others. Five flammable material storage cabinets are in this room for various chemicals. The floors inside the Hangar 2 Cold Room are concrete, and appeared to be in good condition.

Adjacent northeast of Hangar 2 is the associated 6,849 sq. foot Hangar 2 Office building. Also, adjacent southeast of Hangar 2 are the two Shipping/Receiving areas. These areas contain pallets of supplies and other parts. Southwest adjacent to Hangar 2 is the NDT (Non-Destructive Testing) Lab. This lab is currently largely unused, though much of the machinery is still present. An ultrasonic cleaner that is no longer used was observed in the lab, as was a testing area with cleaning supplies. Mr. Grubbs also informed us that one of the vacant rooms was a former X-Ray Room. Also observed in the lab was what appeared to be a former containment area. The floor was concrete in this rectangular area, and remnants of a metal border were evident. It was unknown by Mr. Grubbs what this may have been. One Industrial Oven in the lab is still periodically in use, but otherwise the NDT Lab was mostly vacant.

Also southwest adjacent to Hangar 2, just north of the NDT Lab, is the former Health/Medical building. This building has been vacant of operations for approximately 4-5 years, according to Mr. Grubbs. Southwest of this former Medical building is the current Health/Medical Systems building. This building has office and classroom areas, as well as a receptionist/lobby area leading into the treatment/examination rooms.

South adjacent to the Medical Systems building is the Facility Maintenance building. Facility Maintenance is where parts and supplies are stored, along with tools and some cleaning and pesticide chemicals (in a flammable materials storage cabinet). A machine shop is located in the back of the building. In this area, the ceiling and walls are covered with what appeared to be a flame retardant insulation. A significant amount of oil and oil staining was observed on the floors and walls of the machine shop.

Hangar 3 - Like Hangar 2, the 24,272 sq. foot Hangar 3 no longer houses operations, instead it is used for storage of supplies, tools, and inventory. The floor is concrete, like the other Hangars, but more cracking was evident here. Hangar 3 was formerly used as a machine shop,

among other things, so it is possible that contamination could've seeped through the cracks in the floor. Soil gas samples may be recommended in random places of Hangar 3. Hangar 3 was also targeted by Harding ESE, Inc., (now MACTEC) in a Phase I ESA Report dated September 26, 2002 as being the location of possible RECs, discussed in section 4.0.

Hangar 5 – Hangar 5, which connects to the Administration building, houses the 'flow line' areas for assembly and disassembly of aircraft engines, hazardous waste satellite storage areas, testing labs, classrooms, a company store, and a 2nd floor of offices and a records retention area. Hangar 5 also connects to Hangar 2 (southeast). Hangar 5 and the adjoining administration building are the 2 most recently constructed buildings at the SITE.

One of the testing labs in Hangar 5 is the Metrology Lab. This lab has coated flooring, and is used for tools and equipment calibration. Within this lab are a Mercury Barometer room and a possible former bearing cleaning area. Hazardous waste drums in the lab are used for oily rags and solvent. A floor drain was present with a strange circular depression outlining it.

Also in Hangar 5 is a machine shop. Many new and old machines are in the shop area. It is possible that some of the old machines contain oil that may, or may have, contained PCBs. Leaking was observed around some of the machines. It appeared to be minor oil leaking. Various parts storage, and a flammable materials storage cabinet also are present in the machine shop area. Though some oil staining, the concrete floor inside Hangar 5 appeared to be in good condition.

Throughout Hangar 5 are flammable material storage cabinets and hazardous material satellite accumulation areas for aerosol cans, oily rags, etc. The concrete floor in this Hangar appeared to be in decent condition, with many floor drains throughout the operation areas.

The Campbell Grinder room is also located in Hangar 5. This is where parts are milled into tolerance to eliminate imperfections. The Grinder machine emits a mist of oil to lube the parts during the operation. This results in some leaking around the machine. A catch system and clay absorbents are placed around the base of the Grinder to catch most of the oil.

5.1.2 Aboveground and Underground Storage Tanks

Many above ground storage tanks (ASTs) were observed at the SITE during the site reconnaissance. Two 1300 gallon Propane tanks exist just east/southeast of Hangar 2, and a 50,000 gallon wastewater tank exists in the wastewater treatment building on the northeast side of the SITE, adjacent to Hangar 1. Inside the wastewater treatment building is a 6000 gallon tank of Potassium Hydroxide, and other 6000 gallon tanks of Metal Hydroxide Sludge, Spent Sodium, Spent Caustic, Sodium Metabisulfate, Spent Acid, Effluent tanks with pH adjusters, etc. A 2000 gallon tank of Sulfuric Acid, used for various cleaning operations in the Cleaning Area, is located in the Hangar 1 Annex.

No evidence of underground storage tanks (USTs) was observed at the SITE during our reconnaissance. Mr. Grubbs did confirm that one UST was abandoned in place underneath the Cleaning Line. This is the only UST Mr. Grubbs is aware of at the SITE.

5.1.3 Hazardous Substances and Petroleum Products

The SITE has designated areas for Hazardous Materials and Hazardous Waste, and many Flammable Material storage cabinets throughout. The Hazardous Materials and Waste canopy, just east of Hangar 3, houses a multitude of 5 gallon buckets and 55 gallon drums of various oils and chemicals used in operations. Waste oil and other hazardous materials waste is also stored here in 55 gallon drums. Concrete secondary containment surrounds the Hazardous Waste area. Many other 32 gallon plastic containers of solvents and other cleaning agents are housed in the Hazardous Materials area as well. Other 'Hazardous Waste Satellite Accumulation Areas' are found throughout the SITE inside the Hangars, lab testing areas, and cleaning areas, etc. These areas contain several 55-gallon drums for items such as oily rags, used aerosol cans, batteries, fluorescent bulbs, ballast, high pressure bulbs, etc. No leaking or significant staining was observed at any of the hazardous materials or waste storage areas.

5.1.4 Solid Waste

The refuse generated at the SITE is from operations and general office waste. Two large refuse compactors are located on the southeast side of the SITE, just south of the hazardous waste storage canopy. Five steel dumpsters are located in this area as well. Other small refuse bins are located throughout the Hangars and other buildings. The City of Ontario removes general refuse from the SITE. Heritage Environmental removes hazardous materials waste.

5.1.5 Electrical Transformers

Pad and pole-mounted electrical transformers were observed throughout the SITE. These transformers were noted to be in good condition, with no evidence of leaks or staining for most. One of the pole mounted transformers appeared to have been leaking in the past (old staining), but no current leaks were noted. Each observed pad mounted transformer was labeled to be 'dry type,' containing no PCBs.

5.1.6 Utilities

The SITE utilities are provided by the following: City of Ontario (sanitary sewer, water, and general refuse), Southern California Edison (electric), Southern California Gas (gas), and Heritage Environmental (Hazardous waste, sludge from wastewater treatment).

5.1.7 Wetlands

During our site visit, we did not observe obvious signs of the presence of wetlands on the SITE, i.e., open water or marshes. We did not observe symbols on the USGS maps indicating the presence of wetlands.

5.1.8 Air Emissions

The SITE has current permits with the South Coast Air Quality Management District (SQAMD) for operating machines on the Clean Line adjacent to the Hangar 1 Annex, as well as for abrasive blasting and glass bead cabinets at the SITE.

5.1.9 Wells and Mine Shafts

We did not observe wells or indications of mine shafts on the site during our reconnaissance. According to Mr. Grubbs, no monitoring wells are located at the SITE.

5.1.10 Pits, Ponds and Lagoons

We did not observe pits, ponds or lagoons on the site during our reconnaissance.

5.1.11 Wastewater/Effluent Discharge

The SITE has a wastewater treatment building that discharges to the City of Ontario sewer system. Sumps are located on the SITE that pump the wastewater generated at various locations of the SITE to this treatment building. This plant is permitted through the "permit by rule" system. The industrial wastewater permit is issued by the Inland Empire Utilities Agency and County Sanitation Districts of Los Angeles County. Cleaning operations generate the majority of the wastewater at the SITE. Many chemicals are used in the cleaning areas, and then rinsed with water. This wastewater flows into floor drains and grates, and is pumped to the wastewater treatment building. According to Mr. Grubbs, the wastewater effluent from the treatment building is tested and inspected regularly by the permitting agencies.

5.1.12 Sensitive Receptors

We did not observe sensitive receptors (e.g., drinking water wells) on the SITE during our reconnaissance.

5.1.13 Asbestos

An asbestos-containing materials survey was not included as part of the scope of services for this assessment.

5.1.14 Lead-Based Paint

A lead-based paint survey was not included in the scope of services for this assessment.

5.1.15 Dry Cleaning

We did not observe indications of former or current dry cleaning activities on the site during our reconnaissance.

5.1.16 Other

No other items that might be considered recognized environmental conditions relative to the SITE were observed during the site reconnaissance.

5.2 AREA RECONNAISSANCE

The area reconnaissance helps us evaluate whether adjacent or nearby property uses may have contaminated the site. Our assessors conducted the reconnaissance by touring the area by automobile and viewing particular businesses from public rights of way, but did not enter off site properties. The findings of our area reconnaissance are discussed according to their direction from the site: north, east, south, and west.

5.2.1 North

Directly adjacent, north of the SITE is the Ontario International Airport. Airport runways are nearest the SITE to the north, with airport buildings and terminals to the north of the runways.

5.2.2 East

Adjacent to the east of the SITE is a paved lot, and the building that was formerly Hangar 4 of the SITE, now an Airport maintenance building. Beyond this, further east, is a fuel farm owned by the adjacent Mercury Air Center.

5.2.3 South

To the south of the SITE is Avion Street. South of Avion Street are other commercial businesses, including Airport Group International, Inc., (south/southwest – closest building south of the SITE), and others to the southeast of the SITE. South of these businesses is the Union Pacific Railroad.

5.2.4 West

To the west of the SITE are other airport buildings and commercial businesses, such as Guardian Jet Center (west/southwest). These buildings are reportedly used for Airport maintenance.

5.2.5 Summary of Area Reconnaissance

The SITE is in an area dominated by the Ontario International Airport and many associated aviation and other businesses. None of the observed nearby businesses appeared to be significant recognized environmental concerns relative to the SITE.

6.0 HISTORICAL REVIEW

In the historical review, we reviewed information on the past uses of the site and nearby properties. We assessed whether these uses may have contaminated the site's soil or groundwater. The earliest historical references we typically consult date from 1940 or from the first developed use of the site or nearby properties. Information sources we commonly use include aerial photographs, fire insurance maps, and USGS topographic maps. The information sources we reviewed as part of this assessment are included in Section 9.0.

The historical review results in two histories, based on the information reviewed: a history of the past use of the site and a history of the past use of the adjacent properties.

6.1 PAST SITE USE

1938 Aerial Photograph

The aerial photograph from 1938 shows the SITE and all adjacent land as undeveloped agricultural land. Mission Boulevard to the south of the SITE is the only distinguishable road present in this photograph.

1949, 1953, 1968, 1977 Aerial Photographs

The 1949 aerial photograph displays the first structures present at the SITE. The structures appear to be Hangars 1 and 2. The 1953 aerial photograph shows other structures now present at the SITE, including Hangar 3. By 1968, Hangar 4 was constructed, as were many other smaller structures at the SITE. The 1977 photo displays little change to the SITE from the 1968 photo, less some smaller building alterations (canopies, etc.) and a couple small new structures.

1989, 1994, and 2002 Aerial Photographs

The Site appears to be fully developed in the 1989 aerial photograph. Hangar 5 and the Administrative building were constructed in 1980, according to Mr. Grubbs, and represent the most recent major building additions/construction at the SITE. The 1994 and 2002 aerial photographs show some slight alterations to the SITE up to its present condition.

Sanborn Maps

There were no Sanborn Maps available for the SITE.

1903, 1941, 1954, 1966, 1966-1973 (photorevised), 1966-1981 (photorevised) Topographic Maps

Specific details regarding the SITE development are not provided on the topographic maps. However, in general, the map findings are consistent with the other historical reference review findings. Structures at the SITE are visible beginning in the 1954 topographic map. Hangar 5 and the Administrative building are not visible in any of the topographic maps, likely not yet constructed at the time of the most recent topographic map. Topographic maps of the area during World War II

were reportedly altered for security measures and may not accurately depict SITE conditions during that timeframe.

Building Permits

We reviewed building permits for the SITE address at the City of Ontario Building Department. The following provides a brief summary of the findings:

- 1980: Building permit for Test Cell at SITE.
- 1987: Building permits for electrical work and the Propane Fueling Station.
- 1989 and 1990: Building permits for warehouse improvements, fire sprinklers, electrical and plumbing, ASTs, and a waste water line.
- 1993: Building permits for Roof work and piping, rerooting of IC80 #4630.
- 1997, 1998, 1999: Building permits for more rerooting of IC80 #4630, remodeling improvements, modifications to oil/water seepage system, electrical work, enclosing of the Hangar, modifications to waste water separator, plumbing, and new Hangar doors.

6.2 PAST USE OF SURROUNDING PROPERTIES

The following information was obtained from our historical research pertaining to properties surrounding the SITE:

- North: The 1949 aerial photograph shows the first developed structures surround the SITE. In this photo, the Ontario International Airport is to the north, as it is today. Aircraft are located to the northwest of the SITE (Hangars 1 and 2), aside some small buildings. Today, the Ontario International Airport is still north of the SITE, with many more associated buildings and runways than in 1949.
- East: The area east of the SITE was vacant until the 1953 aerial photograph, which displays the east adjacent area to be paved for aircraft parking and storage. Many small structures are visible in the paved area ordered in 2 rows. Until 1989, only a paved lot was east adjacent to the SITE. The 1989 aerial photograph displays the building where Mercury Air Center currently resides to be constructed. Southeast across Avion Street is also more commercial development.
- South: The Union Pacific Railroad tracks and farmland are the only features located south of the SITE until the 1949 aerial photograph when some commercial buildings are noticeable between Avion Street and Mission Boulevard. Further development to the south of the SITE beyond Mission Boulevard is not observed until the 1989 aerial photograph. The 1989 photo shows greater commercial and industrial development south of the SITE beyond Mission Boulevard than the 1977 photo. From the 1989 aerial photograph until the 2002 photo, some small developments occurs south of the SITE between Avion and Mission leading to present condition.
- West: West of the SITE is farmland until approximately the same time the first SITE structures are evident in the 1949 aerial photograph. In the 1949 photo, possible airport buildings are observed to the northwest of the SITE. Aircraft can be seen parked around these structures. Further development of these airport buildings, and a few other new buildings, is observed in aerial photographs up to the present. Airport runways currently stretch from northeast of the SITE to northwest.

7.0 REGULATORY AGENCY INFORMATION

We reviewed excerpts of federal, state, and local environmental regulatory agency lists for those properties which were within the search ranges as noted in the excerpts that were prepared by EDR, an environmental data search firm. EDR revises their lists periodically when they receive updates from the agencies. The date of the latest revision is shown on their report, which is appended to this report as Appendix B, The EDR-Radius Map with GeoCheck®. The EDR report also summarizes the origin and purpose of each list.

Please note that regulatory listings are limited and include only those sites that are known to the regulatory agencies at the time of publication to be contaminated or in the process of evaluation for potential contamination. Our scope of services did not include the review of agency files.

7.1 FEDERAL CONTACTS

Environmental Protection Agency (EPA) National Priorities List (NPL), dated 7/1/05

The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) established the National Priorities List (NPL) of federal "Superfund" sites. This list identifies Superfund sites that have been designated as national priority clean-up sites and targeted for immediate action due to their high assigned ranking, in terms of potential public health effects, by the EPA.

- The SITE does not appear on the NPL.
- No NPL-listed facilities are within a 1-mile radius of the SITE.

EPA Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS), dated 6/27/05

The CERCLIS lists and identifies suspected contamination sites throughout the nation; CERCLIS contains information on sites identified by the U.S. EPA as known or suspect abandoned, inactive, or uncontrolled hazardous waste sites which may require cleanup. The CERCLA 'No Further Remedial Action Planned' (NFRAP) list, dated 5/17/05, identifies former CERCLIS sites that have been removed from the list.

- The SITE does not appear on the CERCLIS list.
- No CERCLIS-listed facilities are within a 1-mile radius of the SITE.

- The SITE does appear on the CERC NFRAP list, indicating it was formerly a CERCLIS-listed site. The EDR reports that the SITE has been off the CERCLIS list since the late 1980s. The CERC NFRAP listing does not constitute a recognized environmental condition (REC).

Corrective Action Report (CORRACTS) list, dated 6/28/05

The CORRACTS list identifies hazardous waste handlers with RCRA corrective action activity.

- The SITE does appear on the CORRACTS list. From the late 1980s until 1997, the SITE is reported to have had 13 CORRACTS records stemming from mainly human exposure to hazardous materials and suspected or observed ground water contamination. Each of these records received a corrective action to stabilize contamination, and work plans were implemented to avoid further instances. No further details were given in the EDR regarding the nature of the contaminations that required corrective action.
- No CORRACTS-listed facilities are located within a 1-mile radius of the SITE.

EPA Resource Conservation and Recovery Information System (RCRIS), dated 5/20/05

RCRIS, or the Resource Conservation and Recovery Act (RCRA) Notifiers List, is an EPA database of facilities that generate and/or transport hazardous waste. This list also serves to track the status of hazardous waste treatment, storage, and/or disposal (TSD) facilities regulated under RCRA.

- The SITE does appear on the RCRA TSD list and the RCRA Large Quantity Generator list. Violations have been reported at the SITE stemming from human exposure to hazardous materials and suspected or observed ground water contamination. Stabilization measures were implemented, including source removal and treatment (i.e. soil or waste excavation, in-situ soil treatment, off site treatment). Compliance was achieved for the RCRA TSD violations by 1990. No further details were given for the other violations. The fact that ground water and soil were affected by the contamination may be an REC.
- Five RCRIS-listed Small Quantity Generators are located within a ½-mile radius of the SITE. All of the sites are approximately ¼-mile down or cross gradient from the SITE. No violations were reported at any of these sites.
- One RCRIS-listed Large Quantity Generator was found within ½-mile of the SITE. No violations were reported at this site.

EPA Emergency Response Notification System (ERNS), dated 12/31/04

The ERNS list is a national database used to collect information on reported releases of oil and hazardous substances.

- The SITE does appear on the ERNS list. A release of sewage was reported to have affected the soil and storm drain in 1991. The SITE was responsible for cleanup. No further details were given.

SARA Title III, Section 313 (TRIS), dated 12/31/03

Title III of the Superfund Amendments and Reauthorization Act requires that owners or operators of facilities with more than ten employees and that are listed under Standard Industries Classification (SIC) Codes 20 to 39 report the manufacturing, processing or use of more than a threshold quantity of certain chemicals listed under Section 313. This database is also known as the Toxic Release Information System (TRIS).

- The SITE does appear on the TRIS list. No further details were given in the EDR regarding this listing.

Formerly Used Defense Sites (FUDS), dated 12/31/04

The FUDS list includes locations of Formerly Used Defense Sites Properties where the U.S. Army Corps of Engineers is actively working or will take necessary cleanup actions.

- The SITE does not appear on the FUDS list.
- One FUDS listed facility is within a 1-mile radius of the SITE. The facility, Ontario Army Airfield, is located approximately ½-mile up gradient north of the SITE. No violations are reported for the site, thus it is not considered an REC relative to the SITE.

7.2 STATE CONTACTS

Annual Work Plan (AWP) list, dated 5/4/05

The Annual Work Plan (AWP) of the California Hazardous Substance Cleanup Bond Act of 1984 (state Superfund act) identifies California hazardous waste facilities targeted for cleanup by responsible parties, the state, and the EPA over the next five years.

- The SITE does not appear on the AWP list.
- One AWP-listed facility is located within a 1-mile radius of the SITE. The facility, GE Engine Services, is located approximately ½-mile cross gradient, east/southeast of the SITE. The facility was reported to have had suspected ground water contamination. No further details are given in the EDR, but due to location and gradient with respect to ground water, this site does not constitute an REC relative to the SITE.

CALSITES (CAL) list, dated 5/4/05

The CALSITES database identifies certain potential hazardous waste facilities, based on file searches and windshield surveys. Some of the facilities may have undergone supplemental inspection or sampling.

- The SITE does not appear on the CALSITES list.
- Two CALSITES-listed facilities are within a 1-mile radius of the SITE. One of the facilities, GE Engine Services, is located approximately ½-mile cross gradient, east/southeast of the SITE. The facility was reported to have had suspected ground water contamination. No further details are given in the EDR, but due to location and gradient with respect to ground water, this site does not constitute an REC relative to the SITE. The other facility, Usang Ontario Air National Guard, is located approximately ¾-mile cross gradient, east/southeast of the SITE. This facility had confirmed ground water contamination, but as of September of 2000, the site is certified as having been remediated satisfactorily under DTSC. This site does not constitute an REC relative to the SITE.

California Office of Planning and Research (CORTESE) list, dated 4/1/01

The CORTESE database, a consolidation of information from various sources, lists potential and confirmed hazardous waste facilities or hazardous substance facilities.

- The SITE is not included on the CORTESE list.
- Four CORTESE-listed facilities are located within a 1-mile radius of the SITE. The first facility, GE Ontario Aircraft Engines, is located approximately ½-mile cross gradient, east/southeast of the SITE. No details are given for the CORTESE listing, but the site is also listed in the LUST database, with more details below. The second facility, Fluor Corp. Flight Operations, is located approximately ¼-mile down gradient, southwest of the SITE. No further details are reported regarding the CORTESE listing. The site is also listed in the LUST database, with more details below. The third CORTESE facility, Hertz Rent a Car, is located approximately ½-mile down gradient, south of the SITE. No further details are provided in the EDR regarding this listing. The site is also listed in the LUST database, with more details below. The final listed facility, GE Aircraft, Engine Maintenance, is located at the same address as the first facility listed above, approximately ½-mile cross gradient, east/southeast of the SITE. No further details are provided in the EDR regarding this CORTESE listing; however, the site is also listed in the LUST database, with more details below.

GE Ontario Aircraft Engines and GE Aircraft, Engine Maintenance constitute one facility, GE Engine Services, located at 2264 Avion Place, approximately ½-mile east/southeast of the SITE.

Leaking Underground Storage Tank (LUST) list, California and Regional, dated 7/11/05

The State Water Resources Control Board and Regional Water Quality Control Boards maintain the LUST lists with reported leaks from underground storage tanks.

- The SITE does not appear on the LUST list.
- Four LUST-listed facilities are located within a ½-mile radius of the SITE. The first facility, GE Aircraft Engines (a different GE property than the SITE) is located approximately ½-mile cross gradient, east/southeast of the SITE. The facility reported a gasoline and jet fuel leak that affected the drinking water aquifer to 120 feet in the early 1990s. The Santa Ana Regional Water Quality Control Board (SARWQCB) was the lead agency, and the case is listed to be in 'Pollution Characterization' status. Ground water was impacted with up to 5.5 ppb Benzene. Due to distance from the SITE and gradient with respect to ground water, it is MACTEC's opinion that this listing does not constitute an REC relative to the SITE. The next LUST facility, Avis Rent a Car., is located approximately ½-mile up gradient, northeast of the SITE. The site reported a gasoline leak that affected the soil in 1997. Remediation actions are not discussed in the EDR, however the case is closed. Due to the fact only soil was affected by the leak, this site does not constitute an REC relative to the SITE. The third LUST facility, Fluor Corp. Flight Operations, is located approximately ¼-mile down gradient, southwest of the SITE. The facility reported a leak of jet fuel that was discovered to have affected the soil in 1991. Remedial actions are not discussed in the EDR, however the case was closed in 1992. Due to only soil being affected by the leak, as well as gradient with respect to ground water, this site does not constitute an REC relative to the SITE. The remaining LUST facility, Hertz Rent a Car, is located approximately ½-mile down gradient, south of the SITE. The site reported a gasoline leak that affected the soil in 2000. Remediation actions are not discussed in the EDR; however, the case was closed in 2001. Due to the fact only soil was affected by the leak, this site does not constitute an REC relative to the SITE.

Active Underground Storage Tanks (UST) list dated 10/13/04

The UST list inventories active tank sites registered with the State Water Resources Control Board (SWRCB).

- The SITE does not appear on the UST list.
- Three UST-listed facilities are located within a ½-mile radius of the SITE. These sites are all approximately ¼-mile cross gradient from the SITE. No violations are reported for any of these facilities.

Waste Management Unit Database (WMUDS) List, dated 4/1/00

The WMUDS is used by the State Water Resources Control Board Staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. The WMUDS includes the SWAT database.

- The SITE is not included on the WMUDS list.
- No WMUDS-listed facilities are within a ¼-mile radius of the SITE.

7.3 OTHER LISTS

Ten of the 42 remaining regulatory lists contain listings within the search radii as designated in the EDR report. The listings appeared on the California Bond Expenditure Plan (CA BEP) list, Waste Discharge (CA WDS) database, Facility Index System (FINDS), Emissions Inventory (EMI), California Facility Inventory Database (CA FID UST) list, the Hazardous Substance Storage Container Database (HIST UST) list, the Statewide Environmental Evaluation and Planning System (SWEEPS UST), the Spills, Leaks, Investigations, and Cleanups (SLIC) list, the Facility and Manifest (HAZNET) list, and the San Bernardino County Fire Department hazardous materials permit (San Bern Co. Permit) list.

CA BEP

This Department of Health Services developed site-specific expenditure plan is used as the basis for an appropriation of Hazardous Substance Cleanup Bond Act Funds. The SITE is on the CA BEP list. The SITE is reported have disposed of a large quantity of hazardous waste into dry wells, affecting the soil and potentially the ground water. Human exposure was also listed as a concern. The SITE was not the only potentially responsible party (PRP) for this contamination. The SITE and other PRPs were deemed responsible for the cost of investigation and remedial action. This occurred in the late 1980s. No further details were given.

CA WDS

The CA WDS list includes sites that have been issued waste discharge requirements. The list is compiled by the State Water Resources Control Board. One CA WDS facility is located within ½-mile of the SITE. The facility is a dewatering plant, located cross gradient east of the SITE. Its potential threat to ground water is not reported. In our opinion, this site does not constitute an REC relative to the SITE.

FINDS

The Facility Index System (FINDS) database contains both facility information and 'pointers' to other sources that contain more detail. The SITE itself is in the FINDS database. The FINDS database reports other pertinent environmental activity identified at the SITE to be an Aerometric Information Retrieval System, a Hazardous Waste Tracking System, a National Emissions Inventory, a Resource Conservation and Recovery Act Information System, and a Toxic Chemical Release Inventory System. In our opinion, this listing does not constitute an REC relative to the SITE

EMI

The Emissions Inventory Data list (EMI) contains toxics and criteria pollutant emissions data collected by the California Air Resources Board and local air pollution agencies. The SITE itself is found in the EMI database. This listing represents the fact that the SITE releases emissions into the air. No violations are reported with this listing. Since the EMI list is simply an inventory for air emissions, and no violations are reported, we do not see this listing as an REC relative to the SITE.

CAD FID UST List

The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. The SITE itself is on the FID list, along with 5 other facilities within a ½-mile radius of the SITE. An active UST is reported at the SITE. No violations are reported in the EDR stemming from this listing. The other five listed facilities are all approximately ¼-mile from the SITE, and all are either down or cross gradient with respect to ground water. In our opinion, no RECs exist with respect to the SITE.

HIST UST List

The information for this listing is obtained from the SWRCB and contains information on historical UST sites. The SITE itself is on the HIST UST list, along with 5 other facilities within a ½-mile radius of the SITE. The SITE is reported to have 17 historical USTs, used for diesel fuel and waste oil. No report of any leaking is presented in the EDR, and the SITE is not on the LUST list. Two of the other HIST UST-listed facilities are located approximately ¼-mile down gradient, southwest of the SITE at the same address. This address is in the LUST database. Due to distance and gradient, this is not considered an REC relative to the SITE. The 3 remaining HIST UST sites are located approximately ½-mile cross gradient, east/southeast of the SITE. No violations are reported at any of these sites, thus they are not considered RECs relative to the SITE.

SWEEPS UST List

This underground storage tank listing was updated and maintained by a company contracted by the SWRCB in the early 1980s. The listing is no longer updated or maintained. The local agency is the contact for more information. The SITE itself is on the SWEEPS UST list, along with 5 other facilities within a ½-mile radius of the SITE. The SWEEPS UST list reports 14 USTs at the SITE. No violations were reported. Of the remaining 5 SWEEPS listed facilities, one (Fluor Corp. Flight Operations) is also in the LUST database. This site is located approximately ¼-mile down gradient, southwest of the SITE. The facility reported a leak of jet fuel that was discovered to have affected the soil in 1991. Remedial actions are not discussed in the EDR; however the case was closed in 1992. Due to only soil being affected by the leak, as well as gradient with respect to ground water, this site does not constitute an REC relative to the SITE.

HAZNET List

This data is extracted from the copies of hazardous waste manifests received each year by the DTSC. Two HAZNET facilities are located with a ⅛-mile radius of the SITE. Both facilities are located approximately ⅛-mile down gradient south of the SITE. No violations are reported for either facility, and thus we do not see them as RECs relative to the SITE.

SLIC List

The Spills, Leaks, Investigations, and Cleanups (SLIC) list includes unauthorized discharges from spills and leaks, other than from underground storage tanks or other regulated sites. One SLIC-listed facility is located within a 1-mile radius of the SITE. The facility, Lockheed Aircraft Service Co., is located approximately ½-mile up gradient, northeast of the SITE. The site is reported to have had a leak of VOCs. No further details are given in the EDR regarding this listing. Due to distance from the SITE, we do not see this facility as an REC relative to the SITE.

San Bernardino County Hazardous Materials Permits

This listing includes USTs, medical waste handlers/generators, hazardous materials handlers, hazardous waste generators, and waste oil generators/handlers. The SITE itself and 19 other facilities are on the San Bern Co Permit list within a ½-mile radius of the SITE. Each of the listed facilities is located either cross or down gradient from the SITE, and no violations were reported stemming from the Permit listing. In our opinion, the San Bernardino County Permit listings do not constitute RECs relative to the SITE.

Orphan Summary

The Orphan Summary list consists of sites with poor address quality, usually without zip code information. However, if street addresses are available, these site locations are checked against the known vicinity of the SITE to evaluate if they are located within the select ASTM search distances. Forty-two Orphan Sites are listed within a 1-mile radius of the SITE. We did not identify orphan properties located near the site that, in our opinion, represent a potential environmental concern.

7.4 AGENCY CONTACTS

We contacted the following agencies to document whether they maintained records for the SITE:

- South Coast Air Quality Management District (SCAQMD): We sent a fax to the SCAQMD on October 7, 2005 to document whether the agency maintained records for the SITE. We received a 14 page file from SCAQMD on October 13, 2005. The file contained permits to operate records for equipment at the SITE, as well as 2 Notices of Violation regarding certain equipment. No significant RECs were identified.
- RWQCB – Santa Ana Region: We sent a fax request to the Santa Ana RWQCB on October 7, 2005 to document whether the agency maintained records for the SITE. The RWQCB responded on October 10, 2005 that records are available to review. We received client authorization to review the files and made an appointment with the Santa Ana RWQCB in Riverside, CA. We went to review RWQCB files on November 7, 2005. A summary of the findings from this visit can be found in Section 7.1.
- California EPA – Department of Toxic Substances Control (DTSC): We sent a fax request to the DTSC on October 7, 2005 to document whether the agency maintained records for the SITE. DTSC responded to us on October 17, 2005 that records are available to review on or after October 21, 2005. We received client authorization to review the files and made an appointment with the DTSC in Cypress, CA. We went to review DTSC files on November 1, 2005. A summary of the findings from this visit can be found in Section 7.2.
- San Bernardino Department of Environmental Health (DEH): We sent a fax request to the San Bernardino DEH on October 7, 2005 to document whether the agency maintained records for the SITE. On October 13, 2005, MACTEC received a phone call from a DEH employee stating the only item they have on record for the SITE is a small quantity generator permit for medical waste. The most recent permit they have on file expired on June 30, 2005.
- County of San Bernardino Fire Department (SBCoFD): We sent a fax request to the SBCoFD on October 26, 2005 to document whether the agency maintained hazardous materials/waste, hazardous spills, or USTs records for the SITE. As of January 31, 2006, we had not received a response.

7.5 SUMMARY OF RECORDS REVIEW

Please note that regulatory listings are limited and include only those sites that are known to the regulatory agencies at the time of publication to be contaminated or in the process of evaluation for potential contamination. In our opinion, our review of the above-referenced regulatory information identified zero facilities that are considered significant RECs with respect to the SITE.

8.0 FILE REVIEW SUMMARY

The original scope of work set forth for this Phase I ESA did not include MACTEC's review of agency files. However, upon learning that files did exist regarding the SITE at several agencies, MACTEC submitted a change order of the original proposal requesting permission and additional budget to review agency files on October 26, 2005 to Mr. Bradley Grubbs of GE Engine Services. Mr. Grubbs gave MACTEC signed approval of the change order on October 27, 2005.

Upon the approval from GE Engine Services, MACTEC made appointments and visited both the Regional Water Quality Control Board (RWQCB) and the California Department of Toxic Substances Control. The findings of these visits are discussed below.

8.1 RWQCB – SANTA ANA REGION

MACTEC visited the RWQCB in Riverside, CA to review files on November 7, 2005.

The majority of the files found at the RWQCB dealt with the closure and removal of USTs and Vadose Wells at the SITE. Of note was extensive DTSC-GE correspondence regarding the UST Closure Plan, dated November 20, 1990. The correspondence was from November of the following year (1991), and was essentially back and forth over a Notice of Deficiency the DTSC handed down on the Closure Plan. The DTSC found several sections of the Closure Plan to be incomplete, mainly procedural and sampling sections, among other 'language' issues, and critiqued how these sections should be corrected in order to meet approval.

The other major document found at the RWQCB was the Closure Report for USTs and Vadose Wells, dated May 30, 1991, prepared by OHM Remediation Services Corporation. This report documented the closure of 5 USTs, associated piping, and 5 Vadose Wells. Three 6000-gallon USTs and associated piping were closed and removed first. Two of the USTs were diesel fuel, and one was gasoline. The three USTs were triple rinsed and the water was then pumped from the tanks and stored in another 2000-gallon tank on site. OHM rendered the tanks inert with dry ice. Howie's Crane Service was subcontracted by OHM to remove the tanks and backfill the areas.

During removal of one of the USTs, 50 gallons of hydraulic oil was spilled onto nearby soil. The Closure Report states that the spill was contained quickly, and the contaminated soil was excavated.

The incident was reported to a local agency, but no further documents regarding the incident were found at the RWQCB. Following the incident and completion of the 3 UST removals, 2 soil samples were taken from below where each tank had been removed from (6 total samples).

Following the removal of these 3 USTs, a fourth UST was targeted for closure and removal. This tank was the 1000-gallon Cleaning Line tank, found on the rear northeast corner of the SITE. After removing soil overburden and locating the tank, it was discovered that this UST was buried beneath a vertical support beam that supported the building. Because of this, permission was granted by the San Bernardino Department of Environmental Health and the City of Ontario Fire Department to close the tank in place. The tank was rinsed and closed in place successfully. Two soil samples were taken from below the tank.

The last tank was an 8000-gallon Stoddard Solvent tank located on the west side of the SITE, adjacent to the GE Administration Building. This UST was approximately 15-17 feet below ground surface (bgs), and this led to issues with shoring. During excavation to get down to the tank, the shoring wouldn't stay up. The area was backfilled, and alternative methods were sought. It was decided to subcontract Pacific Shoring, Inc., to install steel beam support to stabilize the shoring. Fourteen 17 foot steel beams were inserted to reinforce the shoring. This proved successful, and once down to the tank, all bottom solids from the tank were removed, the tank was triple rinsed and the water vacuumed out. The UST was removed, and the area backfilled. Three soil samples were taken from the UST area.

The Vadose Wells required no permit to install, so thus no permit was obtained for their removal, according to the Closure Report. The wells were excavated, broke into small pieces, and disposed of.

The soil samples analyzed from each of the UST areas revealed contaminant levels below that which was considered a hazard. No further investigation was advised in the Closure Report or other documents pertaining to the closure.

8.2 DTSC – CYPRESS OFFICE

MACTEC visited the DTSC in Cypress, CA to review files on November 1, 2005.

A large volume of files existed at the DTSC for review. Many of them dealt with the GE Test Cell Site located at 2264 Avion Street, approximately ¼-mile east of the subject SITE. MACTEC perused all DTSC files, but the GE Test Cell Site is not part of this Phase I ESA, so thus these files will not be summarized here.

Many of the documents included in the DTSC files dealt with the same UST and Well closures as found at the RWQCB. Also, the same Notice of Deficiency was found as well regarding the UST Closure Plan that the DTSC found to be incomplete. An additional note was that the removal of 3 UST waste tanks was done without DTSC approval in 1988, and GE was issued a civil penalty (Penalty, Hazardous Waste Control Act 90/91/011) of \$55,000 and required to submit the aforementioned Closure Plan.

Also in the DTSC files was correspondence over the closure plan for the T-58 Test Cell Sump located at the SITE. The correspondence covered the time period of August 1991- August 1992. Dames and Moore, Inc., (DM) was the company contracted by GE to submit the closure plan for the sump. DM was in contact with DTSC and the Department of Health Services (DHS) regarding this closure plan on behalf of GE. DM responded to comments made by DHS dealing with what DHS perceived as 'a lack of provisions for characterizing the lateral extent of contamination'. DM rationalized that the majority of contaminated soil had been removed, and further investigation would be done to assess the extent of vertical contamination, rather than lateral, beneath the sump. DM stated that soil surrounding the sump may have been contaminated by a slow release of wash water possibly leaking from the sump through cracks or joints in the sump materials. The sump was not used as a point of discharge but rather as an in-line separator unit for a waste stream that entered the industrial sewer system. Because of this, DM did not anticipate large volumes of water were released into the subsurface. As such, the slow intermittent release of wash water through cracks in the sump would not, according to DM, produce a great driving force that would carry contaminants to a large lateral area from the sump. In the end, GE committed in the work plan, through DM, to conduct research to assess the quantity of wash water discharged into the sump on an annual basis. Also, GE commissioned the drilling of a boring beneath the former sump to investigate vertical migration of contaminants.

The DTSC responded to this correspondence with an approval letter of the above T-58 Sump Closure Work Plan on August 6, 1992.

Other correspondence found in DTSC files included 2 RWQCB letters to the attorneys of former SITE occupants Northrop Aircraft Corporation and McDonnell Douglas Aircraft Company. These 2 letters were essentially the same, dated 3 days apart in April of 1991; they stated that chlorinated solvents were detected in several wells located south and down gradient from the Ontario Airport, and records indicated that in the 1950s, these two former facilities routinely discharged industrial waste into the ground. The 2 former facilities were cited as 'probable sources of contaminants in the ground water', and requested to submit technical reports. The RWQCB stated that it would soon after be conducting soil gas surveys at each of the former sites, and depending on the results, further investigation maybe warranted. No other documents pertaining to this issue were found at DTSC.

Other documents and correspondence between GE and the DTSC were found, but many dealt with variance on permit issues and other less pertinent items in assessing possible past or current RECs at the SITE. A Closure Certification Report, dated June 2, 1994, prepared by Canonie Environmental, documents the final recommendations and certification of the removed USTs discussed in Section 7.1, closure of an Expanded Drum Storage Area (EDSA), closure of a 2000-gallon waste storage tank, and an oil/water separator. Soil samples were taken and analyzed from each of the closure and excavated areas. Based on the results, Canonie recommended closure be granted without further action. On October 17, 1994, closure was granted and certified by the DTSC.

9.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I ESA in general conformance with the scope and limitations of ASTM E 1527-00 of GE Engine Services, Inc., (SITE) located at 1923 East Avion Street in the City of Ontario, San Bernardino County, California. Any exceptions to, or deletions from, the ASTM E 1527-00 scope is described in Section 2.2 of this report.

Based on the findings of our environmental assessment, we have arrived at the following conclusions:

- Some cracks were observed in the floor inside Hangar 3 where contaminants could potentially seep through. The Hangar is a former machine shop, so oils and other chemicals may have been used. Based on this and the assessment made in the Harding ESE Phase I ESA dated September 26, 2002, detailing high ion counts of Trichloroethene (TCE) and intermediate ion counts of Tetrachloroethene (PCE) detected from Petrex static soil-gas devices in the soils southeast and southwest sides along Hangar 3.
- Inside Hangar 5, on the northwest side of the building, are former locations of a bearing cleaning room and a paint booth. These types of areas use many chemicals for operations. Also, this area currently houses a machine shop, and oil staining on the floor was observed near some machines.
- Inside Hangar 5 is the Campbell Grinder Room. Commonly, this type of area uses hazardous chemicals, such as oils, lubricants, and solvents. If any small cracks exist in the floor, the soil beneath could potentially be impacted. At the time of our reconnaissance, some floor areas were not visible as they were covered with machines, pallets, and oil/clean sweep material. We did not observe any significant cracking in the floors of Hangar 5.
- Plasma spraying reportedly took place in Hangar 2. This is generally more of a health and safety issue during spraying; however, a residue may still be present or may have washed into cracks in the floors, if any exist. A review of former files at the SITE should be performed to determine the type of spray utilized (aluminum, etc.), and potential for environmental impact.
- An Asbestos Exposure Assessment completed March 9, 2004 by Integrity Environmental Consultants Inc. showed that asbestos tiles exist in the Data Processing Building.
- The Cleaning Area inside the Hangar 1 Annex uses Hydroxide and vapor degreasers to clean parts. In the past, TCE and other hazardous solvent chemicals were used. The adjacent

cleaning area on the southeast side of the Hangar 1 Annex used to be outside, where water was washed onto the pavement and ground surface.

- The Flowroom on the northeast side of Hangar 1, currently housing the Fuel Nozzle Purging area and Gear Box Tooling Room, is also the former location of a bearing cleaning area, a finger print neutralizer tank, a solvent tank, and a preservative oil tank. The Flowroom also used to be home to the Thermal Couple Room.
- The 1953 aerial photograph shows aircraft parked in the area immediately west of Hangar 3 on a surfaced area. Based on the 1953 DWR report it was a common practice to wash aircraft at these facilities. Wastewater discharged from aircraft washing operations exceeded the State's limits for phenols. Discharges were to unlined ditches and sumps. The DWR report states that in 1953 the groundwater was not impacted.
- The number of USTs to have historically existed at the SITE is unclear. Listings in the EDR report state that the SITE has historically maintained 14-17 USTs. Mr. Bradley Grubbs of GE was unsure of how many USTs had historically been at the SITE. Harding ESE reported in their 2002 Phase I ESA that 15 USTs historically existed at the SITE. They reported that all USTs had been properly removed and had received acceptance of certification of closure from the DTSC in 1994. This closure letter for 15 USTs at the SITE was not located by MACTEC. This issue should be researched further to confirm the historical and current presence of USTs at the SITE.
- A Closure Plan for the T-58 Test Cell Sump at the SITE was approved in a letter from the DTSC on August 6, 1992. GE committed in the work plan, through Dames and Moore, Inc., to conduct research to assess the quantity of wash water discharged into the sump on an annual basis. Also, GE commissioned the drilling of a boring beneath the former sump to investigate vertical migration of contaminants. No further documentation regarding work performed or a Final Closure Report was located by MACTEC.
- Records indicate that in the 1950s, former SITE occupants Northrop Aircraft Corporation and McDonnell Douglas Aircraft Company routinely discharged industrial waste into the ground. The 2 former facilities were cited as 'probable sources of contaminants in the ground water', and requested to submit technical reports by the RWQCB. Northrop and McDonnell Douglas discharged wastewaters from aircraft washing to unlined ditches and sumps, the exact location of which can not be determined from historical records and aerial photographs.

- MACTEC recommends that a Work Plan be prepared to assess potential recognized environmental concerns addressed in this report. The Work Plan should include soil gas surveys and soil sampling, following all applicable state and local regulatory requirements.

10.0 LIMITATIONS

The findings and opinions in this report are relevant to the dates of our site work. They should not be relied upon to represent conditions at later dates.

Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the professional advice included in this report.

The opinions included in this report are based on information obtained during the study and on our experience. If additional information becomes available that might affect our conclusions, we request the opportunity to review the information, reassess the potential environmental concerns, and modify our opinion, if warranted.

Although this assessment has attempted to identify the potential for site contamination, potential sources of contamination may have escaped detection. They may have been overlooked because of the limited scope of this assessment, the inaccuracy of public records, or the presence of undetected and unreported environmental concerns.

11.0 INFORMATION SOURCES

Geology, Surface Drainage, and Ground-Water Flow

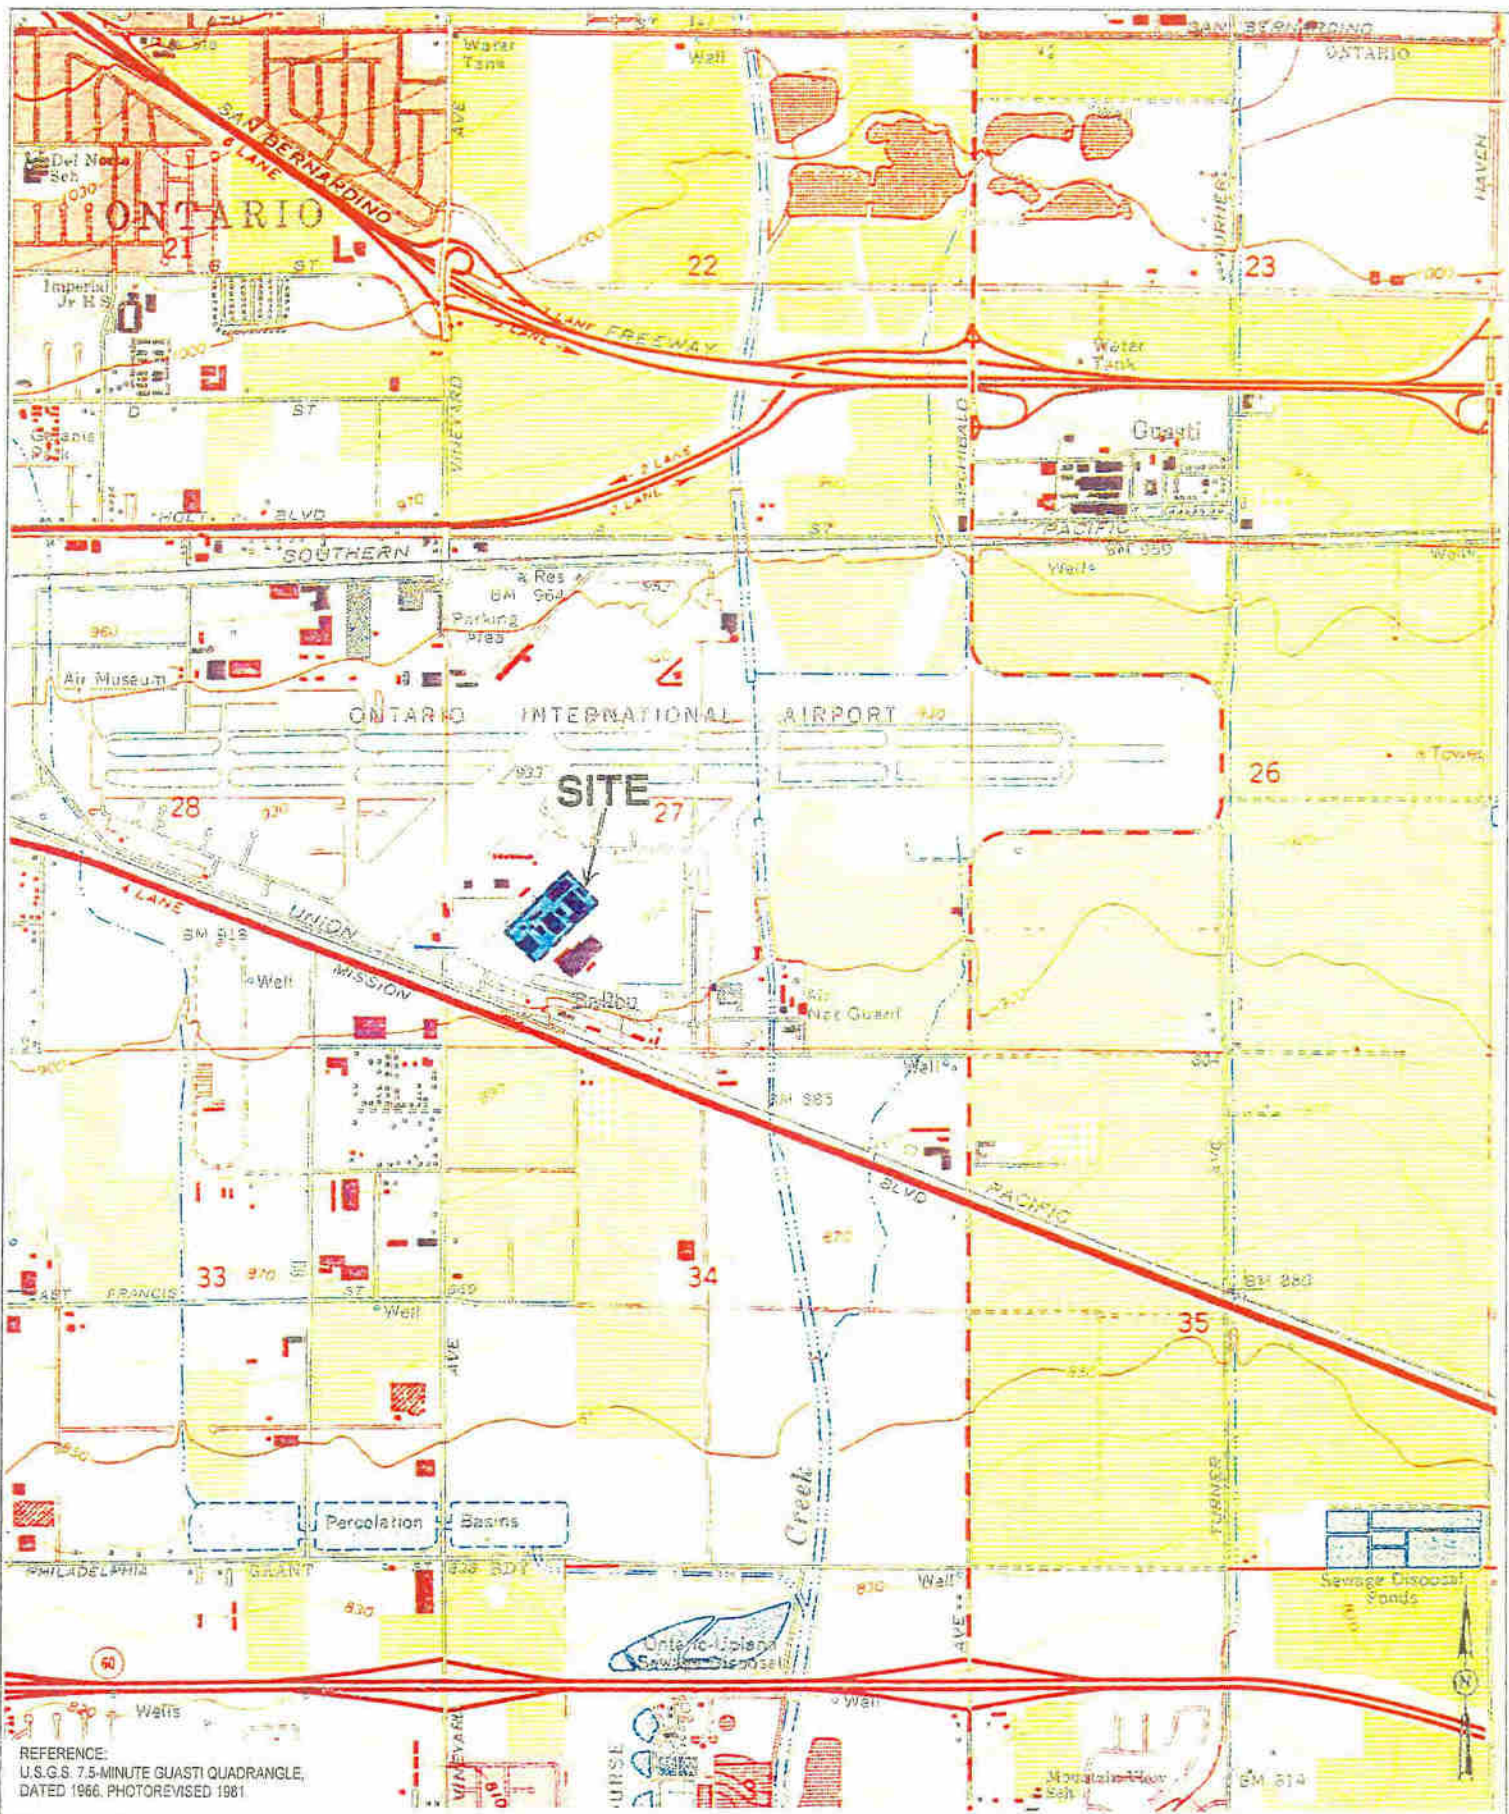

- California Division of Oil, Gas, and Geothermal Resources, 1996, "Regional Wildcat Map W1-4," dated June 22, 1996.
- Harding ESE, Inc., 2001, Phase I Environmental Site Assessment [GE Ontario Site], November 4, 2002, Harding ESE Project No. 54472.1.
- U.S. Geological Survey, "Guasti, California 7.5-Minute Topographic Map," 1966 (photorevised 1981).

Historical Review

- Aerial Photographs dated 1938 (1"=555'), 1949 (1"=500'), 1953 (1"=555'), 1968 (1"=480'), 1977 (1"=666'), 1989 (1"=666'), 1994 (1"=666'), and 2002 (1"=666') from the EDR-Aerial Photography Print Service.
- U.S. Geological Survey (USGS) Topographic Map, 7.5-minute Series, Guasti Quadrangle, dated 1941, 1966, 1966-1973, and 1966-1981 provided by EDR.
- U.S. Geological Survey (USGS) Topographic Map, 15-minute Series, Ontario Quadrangle, dated 1954 provided by EDR.
- U.S. Geological Survey (USGS) Topographic Map, 15-minute Series, Cucamonga Quadrangle, dated 1930 provided by EDR.
- Canonie Environmental, 1994. *Closure Certification Report, Closure of Hazardous Waste Management Units, GE Aircraft Engines, Engine Maintenance Center, Ontario, California*, June
- Dames and Moore, 1988. *Final Closure Report, Underground Storage Tank Site, 1923 East Avion Street, Ontario, California*, August 8.
- Dames and Moore, 1990. *Closure Plan, Hazardous Waste Management Units, Engine Maintenance Center, Ontario International Airport, San Bernardino County, California*, November 20.
- Harding ESE, 2002. *Phase I Environmental Site Assessment, Three Buildings at GE Engine Services, Inc., Ontario, CA*. September 26.
- Meredith/Boli and Associates, 1992. *Information Search (Solvent Use and Potential Releases), Ontario International Airport, San Bernardino, California*, June 10.

- OHM Remediation Services Group, 1991. *Closure Report for Underground Storage Tanks and Vadose Wells, General Electric Aircraft Engines, Ontario, California*, May 30.
- State of California, Department of Public Works, Division of Water Resources, 1953. *Investigation of Waste Discharges at Ontario International Airport, San Bernardino County*, August 10.

APPENDIX A
PHOTOGRAPHS

Project#: 4951-05-2921.01

Date: 11-10-05

Field Staff Initials: MK and KM

Project Name: GE Engine Services, Ontario

Image No.	Description
1	 <p data-bbox="305 1068 1450 1102">View Northeast towards former Hangar No. 4 and other commercial warehouse buildings adjacent to the SITE.</p>
2	 <p data-bbox="371 1876 1384 1910">View south across Avion Street at Airport Group International, Inc., located at 1922 Avion Street.</p>

Image No.	Description
3	 <p data-bbox="558 968 1192 995">View southwest across Avion Street at commercial buildings.</p>
4	 <p data-bbox="564 1770 1186 1798">View east of SITE towards Mercury Air Center's Fuel Farm.</p>

Image No.	Description
5	 <p data-bbox="645 953 1113 985">View northeast towards Mercury Air Center.</p>
6	 <p data-bbox="484 1755 1278 1787">View west towards Avion Street and Vineyard Avenue, Guardian Jet Center.</p>

Image No.	Description
7	 <p data-bbox="371 968 1379 1000">View north down Vineyard Avenue towards Ontario International Airport buildings. West of SITE.</p>
8	 <p data-bbox="371 1766 1379 1800">View southeast along northeast side of Hangar No. 3 (H3).</p>

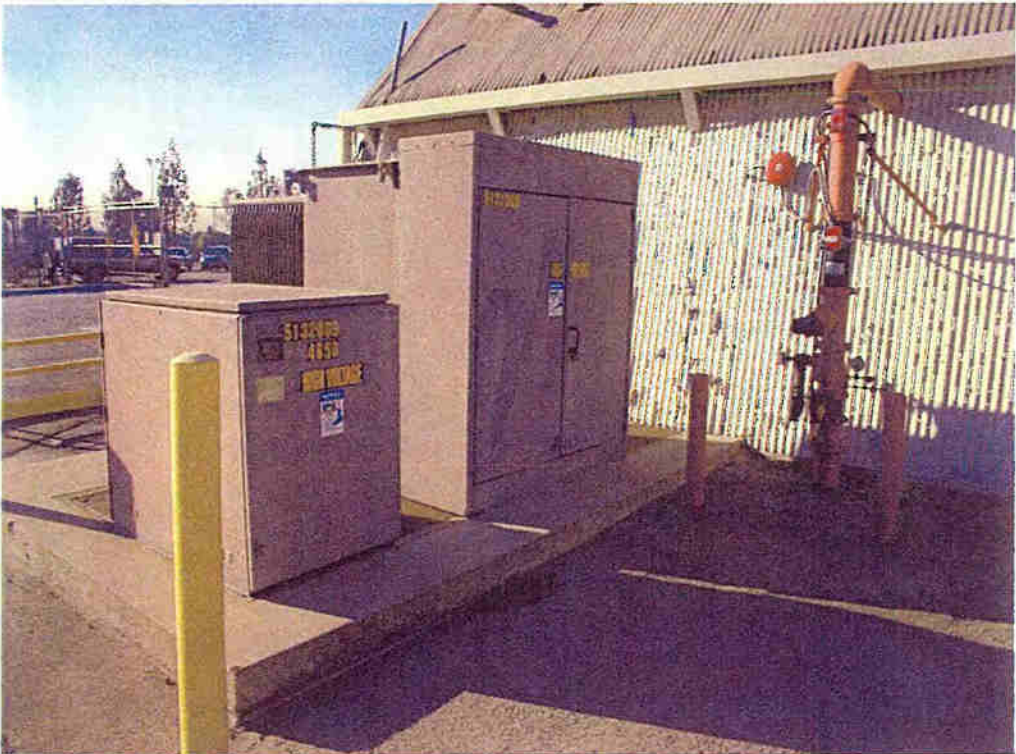

Image No.	Description
9	 <p data-bbox="409 953 1356 978">View of northeast side of H3. On left, wiring leading into or coming out of drain is visible.</p>
10	 <p data-bbox="513 1757 1245 1783">Pad mounted electrical box and transformer on southeast corner of H3.</p>

Image No.	Description
11	 <p data-bbox="426 974 1310 1006">Possible lead based paint flaking off side of H3. Manhole cover visible near H3 wall.</p>
12	 <p data-bbox="381 1815 1359 1847">View of drainage system on southeast side of H3. Spout to drainage visible near corner of H3.</p>

Image No.	Description
13	 <p data-bbox="421 953 1346 978">View inside one of many flammable materials storage cabinets at the SITE. This is in H3.</p>
14	 <p data-bbox="591 1761 1172 1787">Dry type transformers in H3, and elsewhere at the SITE.</p>

Image No.	Description
15	 <p data-bbox="360 961 1400 997">Some cracking in the floor inside H3. Former machine shop area. Seepage of contaminants possible.</p>
16	 <p data-bbox="607 1791 1153 1827">Hazardous Waste storage area, east/southeast of H3.</p>

Image No.	Description
17	 <p data-bbox="350 946 1417 978">Some cracking observed in HazWaste Storage area. Possible circular boring location seen here as well.</p>
18	 <p data-bbox="421 1755 1346 1787">View inside HazWaste Storage Canopy. Entire area is on a concrete pad. Drains to sump.</p>

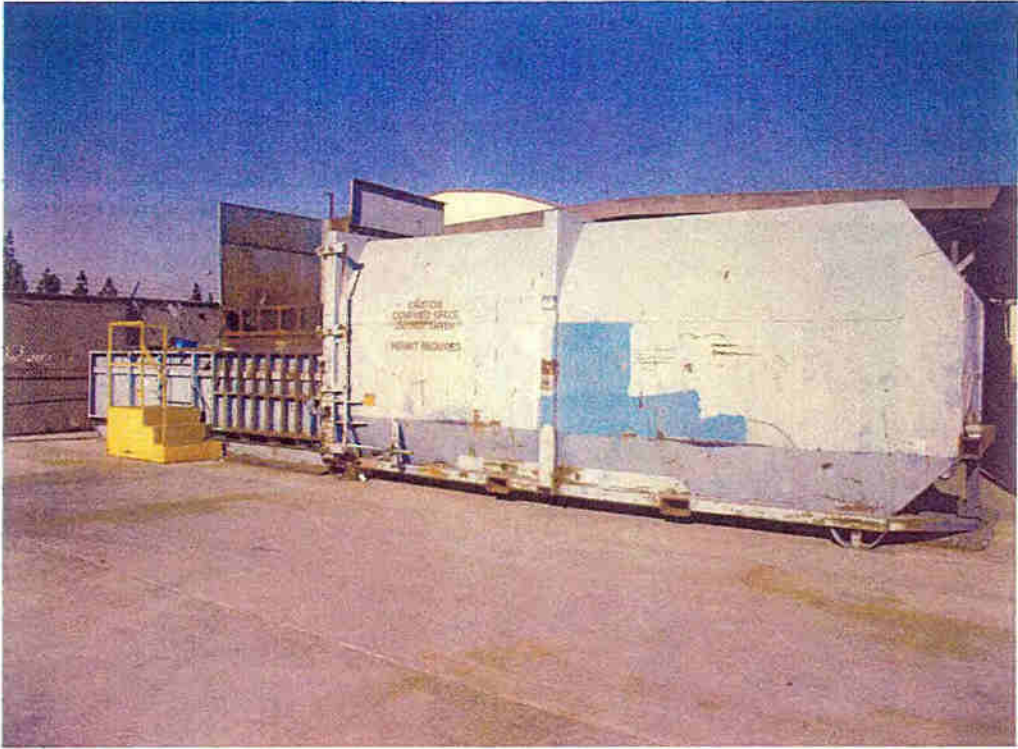

Image No.	Description
19	 <p data-bbox="469 947 1281 976">View of refuse storage compactor behind (south/southeast) HazWaste Canopy.</p>
20	 <p data-bbox="323 1738 1438 1768">View along water pipeline for fire suppression system, located on the southeast side of SITE near perimeter.</p>

Image No.	Description
21	 <p data-bbox="338 953 1422 985">View northeast towards 2 1300-gallon propane tanks. Electric line leading to the tanks (patched asphalt).</p>
22	 <p data-bbox="536 1761 1219 1793">View inside janitorial supply shed of some of the chemicals used.</p>

Image No.	Description
23	 <p data-bbox="310 961 1440 995">Hazardous materials (HazMat) storage canopy. Adjacent to the HazWaste canopy. Concrete slab, sealed floor.</p>
24	 <p data-bbox="487 1761 1258 1793">Hazardous materials (HazMat) storage canopy. Concrete slab, sealed floor.</p>

Image No.	Description
25	 <p data-bbox="409 953 1357 978">View northwest towards H2 (on right), NDT Lab (ahead), and Facilities Maintenance (left).</p>
26	 <p data-bbox="515 1757 1252 1783">View north of Shipping and Receiving building. H2 adjacent behind it.</p>

Image No.	Description
27	 <p data-bbox="447 966 1301 995">View southeast towards the 2 1300-gallon propane tanks used for SITE operations.</p>
28	 <p data-bbox="558 1768 1191 1796">View inside Medical Systems building, inside an exam room.</p>

Image No.	Description
29	 <p data-bbox="482 946 1280 978">HazWaste Satellite Storage shed adjacent to Facilities Maintenance building.</p>
30	 <p data-bbox="294 1755 1473 1813">View inside Facilities Maintenance building. Many heavy tooling machines. Leakage and staining observed. Clay absorbents at the base of many machines to catch leaks.</p>

Image No.	Description
31	 <p data-bbox="426 961 1334 991">View inside Non-Destructive Testing (NDT) Lab of a no longer used ultrasonic cleaner.</p>
32	 <p data-bbox="492 1770 1268 1791">NDT Lab area. Some household chemicals and soaps stored under the sink.</p>

Image No.	Description
33	 <p data-bbox="518 953 1245 981">NDT Lab area. Possible waste water piping leading into drain (sump).</p>
34	 <p data-bbox="563 1757 1199 1785">NDT Lab area. Concrete pad and remnants of a metal border.</p>

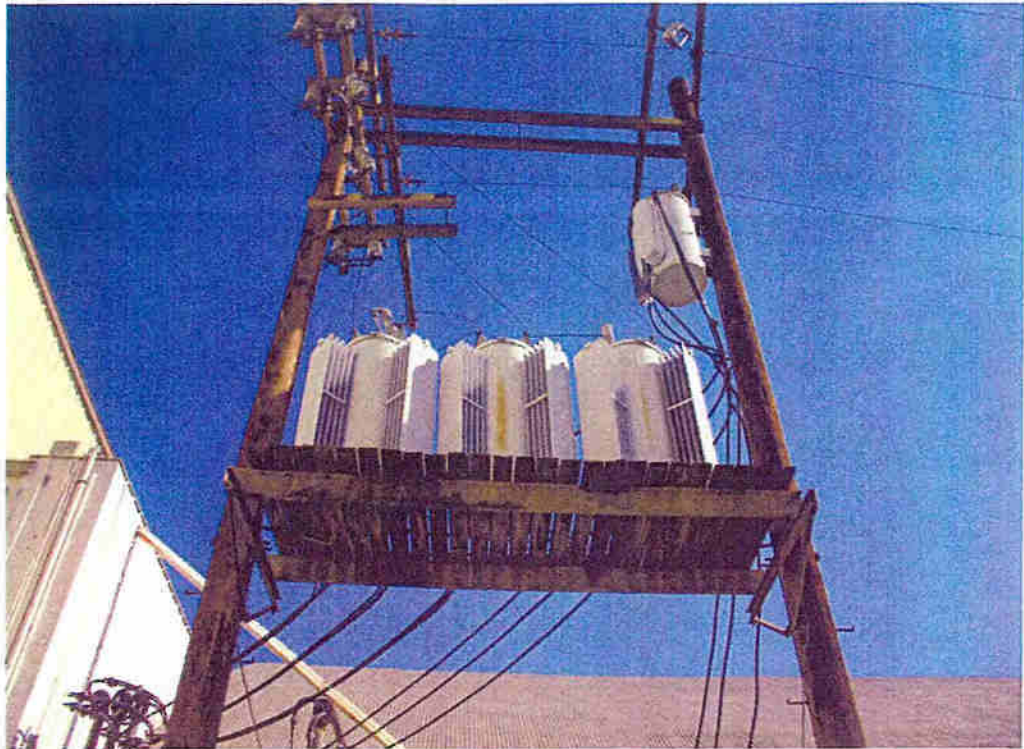

Image No.	Description
35	 <p data-bbox="251 968 1511 1025">Some of the several pole mounted transformers at the SITE. These particular transformers are behind (NW) the NDT Lab, and some staining was observed, though it appeared dry and old.</p>
36	 <p data-bbox="272 1798 1495 1855">Inside H5, Calibration Lab; concrete floor with possible boring hole seen here. A circular depression ring was evident around this hole. Former bearing cleaning area.</p>

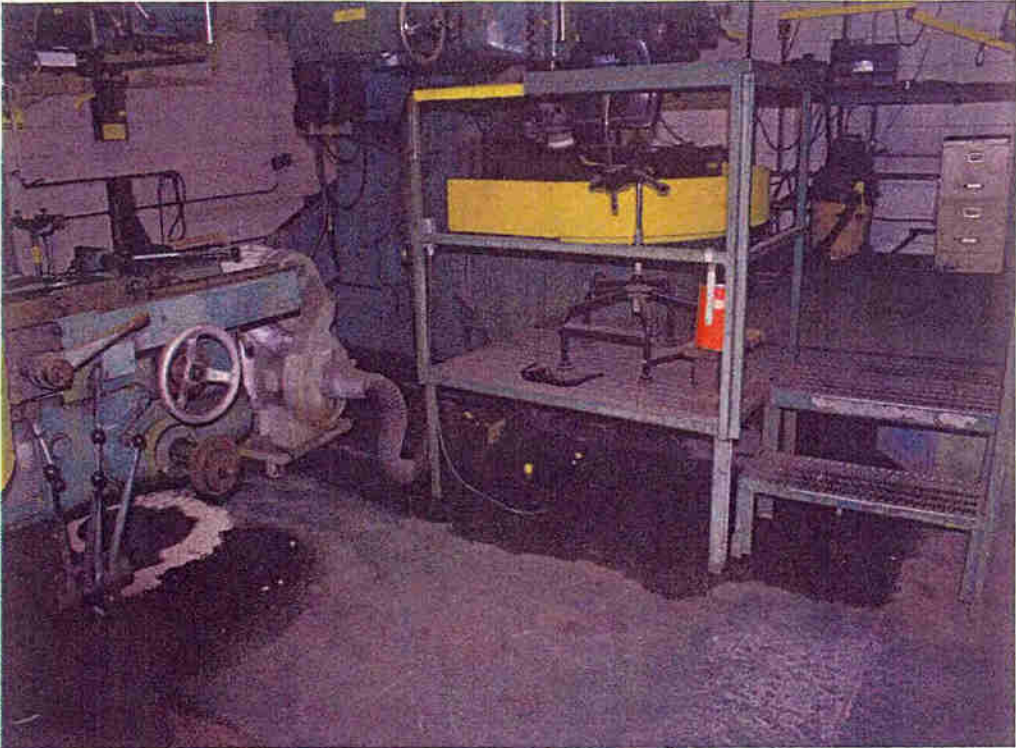

Image No.	Description
37	 <p data-bbox="525 946 1230 981">Machine Shop inside H5. Machines are old, some leaking observed.</p>
38	 <p data-bbox="723 1755 1042 1781">Covered floor drain inside H5.</p>

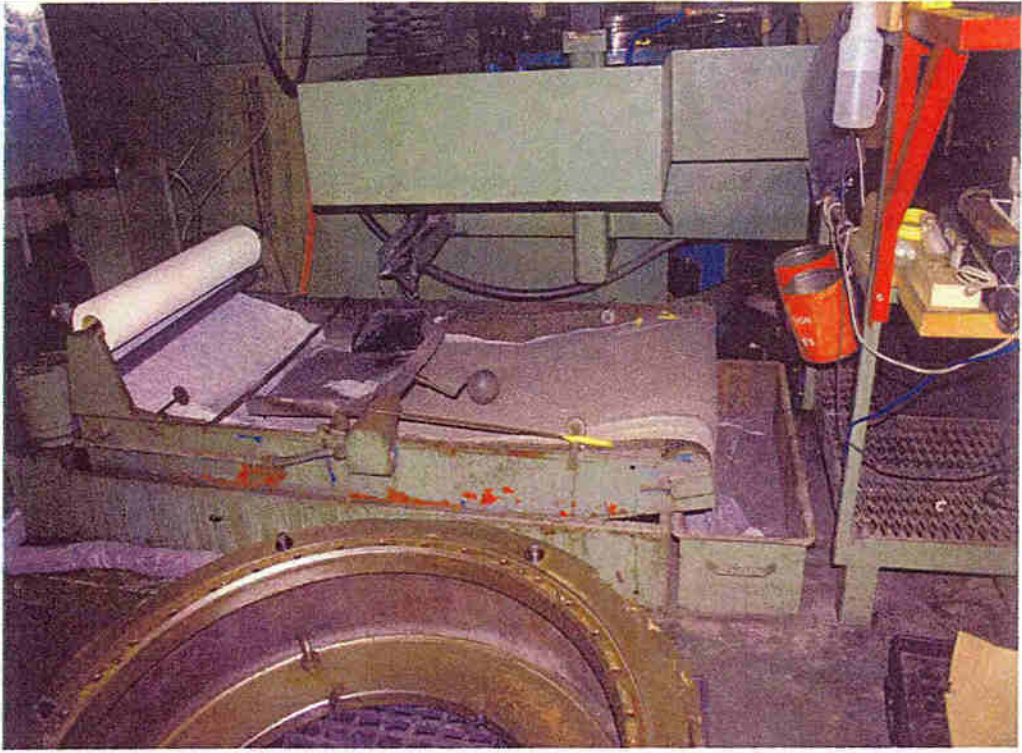

Image No.	Description
39	 <p data-bbox="636 968 1115 1002">Campbell Grinding Room machine inside H5.</p>
40	 <p data-bbox="685 1766 1065 1802">Waste water capture below grinder.</p>

Image No.	Description
41	 <p>Storage of temperature sensitive solvents and bonding agents inside 'Cold Room' of H2.</p>
42	 <p>Storage of temperature sensitive solvents and bonding agents inside 'Cold Room' of H2.</p>

Image No.	Description
43	 <p data-bbox="596 959 1151 991">Shipping storage shed. Pallets of parts and materials.</p>
44	 <p data-bbox="261 1761 1495 1821">Battery backup system for Data Processing building. Cabinet on right removed during week of December 18, 2005. All asbestos containing floor tiles under the cabinet are planned for removal on January 17, 2006.</p>

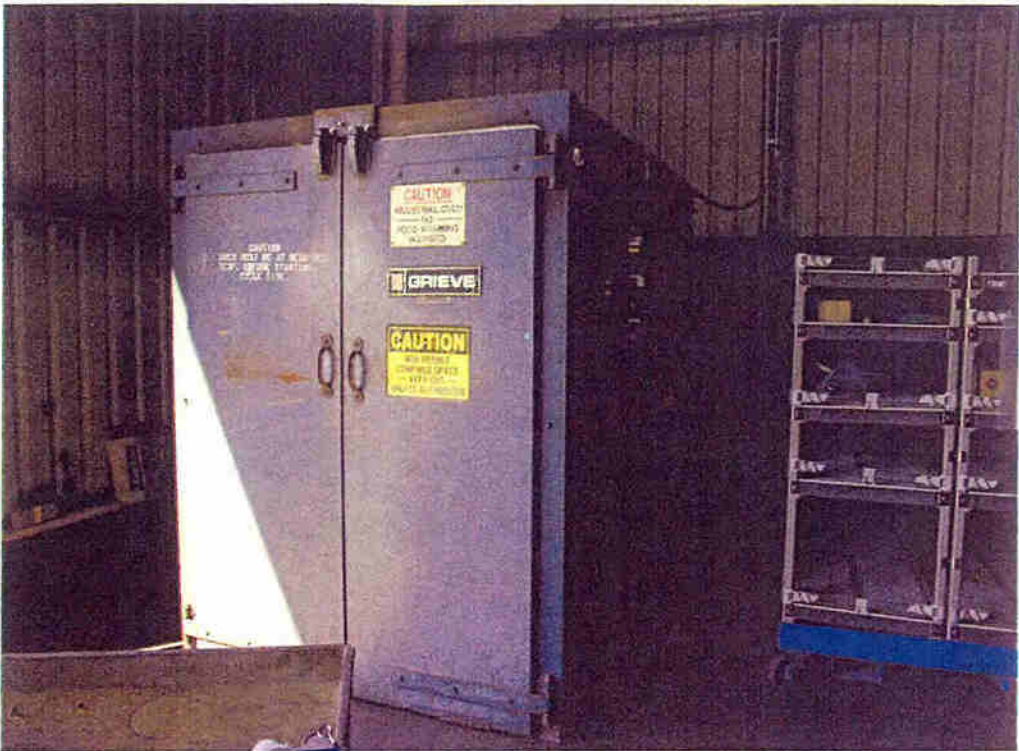

Image No.	Description
45	 <p data-bbox="652 953 1103 978">Heat treating oven inside H1 Balance Area.</p>
46	 <p data-bbox="652 1761 1103 1787">Mag Particle machine inside H1 Annex area.</p>

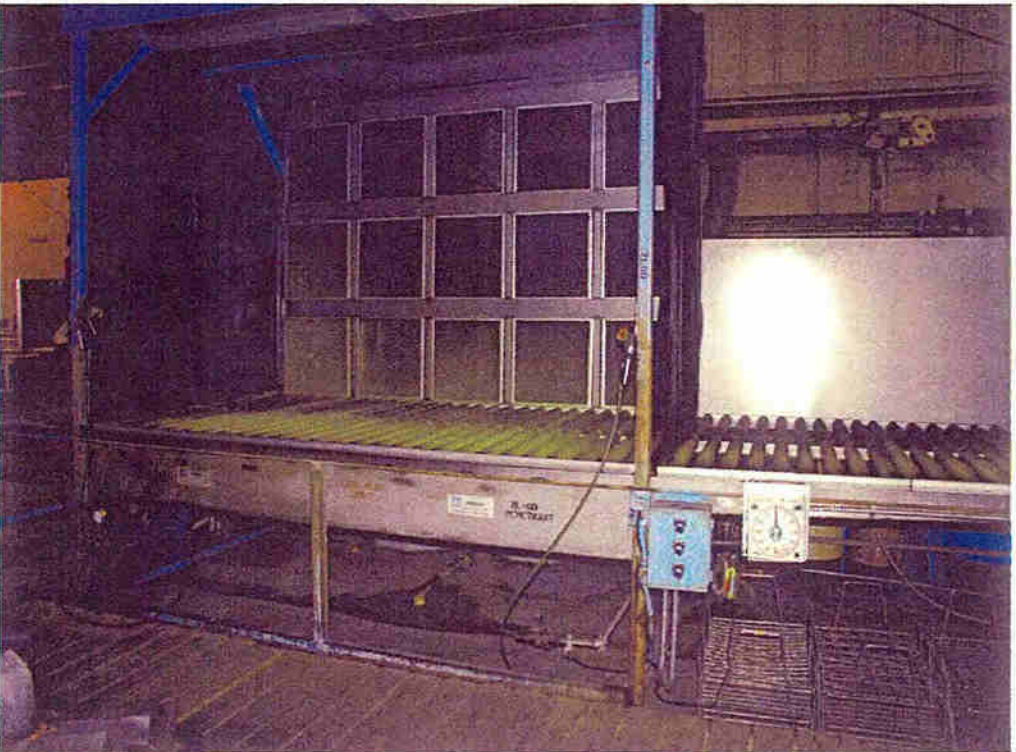

Image No.	Description
47	 <p>H1 Annex; inspection area for parts containing asbestos.</p>
48	 <p>H1 Annex. Cleaning Area. FPI Line.</p>

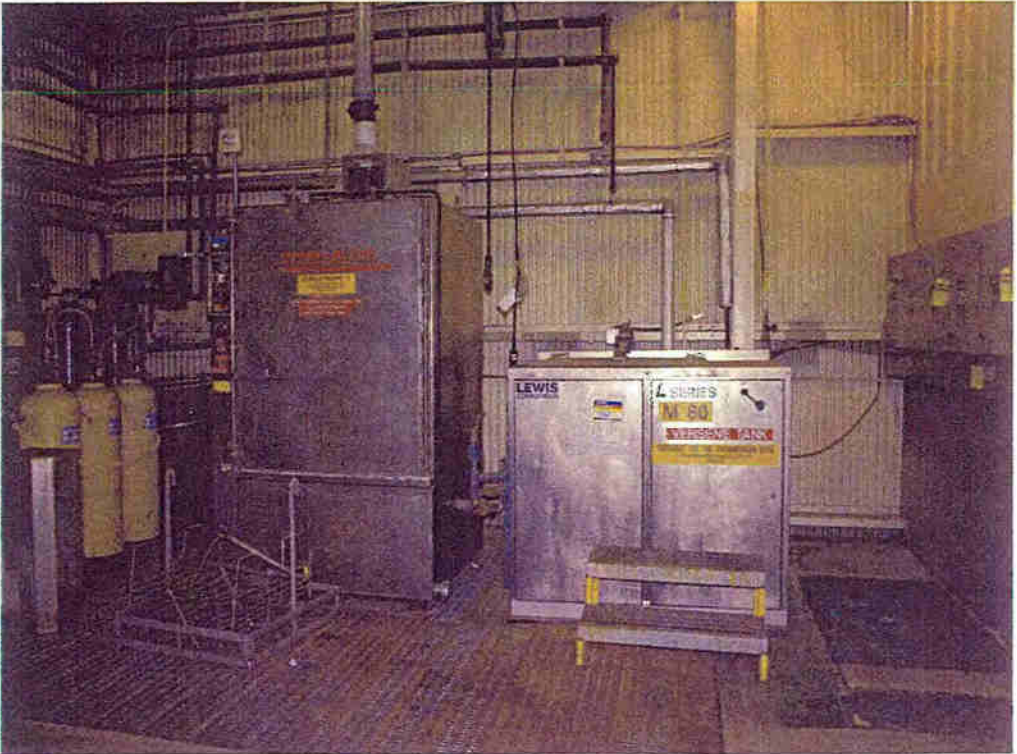

Image No.	Description
